3718. My new scanner is driving me crazy...

Newsgroup: rec.radio.scanner
Date: 2002-06-01 01:38:55 UTC
From: The Other Harry <hc.me@ix.netcom.com>

I recently bought a Radio Shack Pro-2053 scanner. I don't think the brand or model # matters, but that's what it is.

I have most of the active local frequencies set in memory. There aren't a lot of those. Maybe 20.

Invariably, whenever I hear something that might be interesting going down outside the window -- sirens -- the scanner locks up on bullshit talk on some other channel.

It makes me want to smash it on the floor.

Any advice on how to deal with this?

Harry

Well maybe I'm missing something, but if you never listened in the 869-900 mhz regions - how do you know if its worthwhile or not ? Personally I've heard drunk drivers get in wrecks (twice) whilst talking on cell phones (probably a bit more entertaining than monitoring taco bells or trains),have had quite a few hearty laughs listening to people engaged in cell phone sex,and have got some useful numeric info which I shall not go into here.
It boils down to the fact that people are inherently nosey - and if your not well that makes you a pretty unique individual.
Your right though as the point is pretty much mute now with most areas going digital.
I think you hit the head on the nail when you said people just want something with no gaps,and will pay more for it. I certainly fall into that category and don't see anything wrong with it at all. As analog cellular dies in that band it is likely be replaced by something else - and if that something else is of interest to you you might just be wishing you had a no gap scanner.

At the risk of stating the obvious, most of the Virginia freaks are
located just inside the beltway. Close to there, anyhow.
Annandale, Fairfax, etc. They're easy enough to find.

3723. Key West FL PD,FD PL's ?

I'm not concerned about those issues. As far as gadgets, I already
have too many as it is. I can barely walk around in this room and have
two walk in closets full to the ceilings with more even more gadgets.
I have so many gadgets, I have to do an inventory every few years to
refresh my memory on what I have. I have gadgets that I've long since
forgotten about. I've got other gadgets that I've never even tried or
plugged in yet, but I feel should be kept anyway just to further
clutter up this room. You can never have too many gadgets. Trust me on
this. But it best to keep them all a secret or else all your radio
buddys and buddettes will be over trying to scuzz all your gadgets out
from under you.

>
> I know i will see alot of problems regarding my message but its true. here

Dunno... Did you try asking them?

Most areas are using some form of digital service, and not even in
> the 800 band anymore. What is so interesting about listening to cellphones?

Dunno..
> Ive had radios that are capable of it, and never even listened to that
> portion.

Thats mighty "tech" of you.

I think you just want something that has no gaps, and are willing
> to pay more for something that most wont listen to.

Right on. Capitalism at it's greatest.

If its so good how come
> i never see monitoring posts about how Mary got her nails done?

She keeps it a secret.

> Unless you are in the FBI and are trying to foil the next terrorist action,
> dont be bothered with cellular capable scanners

I never let scanners bother me. They know I can smash them in a single
throw.

>
> Morse Code-- have you looked at new licenses lately, looks like our ranks
> are dropping.

I don't think the ranks are dropping. The stream of newcomers may be
slowing down though. I would think that is fairly normal considering
the "rush" of new no-code techs, etc that jumped on the bandwagon in
the past few years is slowing. The "boom" of entry level tickets
issued in the past few years was "no-code" test induced for the most
part. Most in the past that wanted tickets, but didn't want code, have
already grabbed them up.

Ive been a Tech(No-Code) for three years and would like to use
> HF but could care less about morse code. Its an antiquated mode, which had
> its time, although still usefull sometimes,

Most of the present modes are old hat. This includes CW, AM, FM, SSB.
They were all old hat modes when I got a ticket 25 years ago. So
what?
They are still fairly useful aren't they? Or do you propose we dump
all old modes? I think we should be fair about this. If you are going
to dump one old mode, might as well dump em all.

if we keep saying we need Morse
> code, us amateurs will be way behind times(which we still are).

Who is saying this? The only reason we have code tests today is
because international treaty requires it.

Lots of
> people say, when a repeater ID's or i am tuning around the morse sub bands,
> "Is that Morse Code, someone still uses that?" I say yes, its part of
> amateur radio. The person whom im talking to usually says "ill just go to

Well, maybe that would be for the best.

Amateurs
> now adays need to concentrate about leading edge technology, like we once
> did, and stop hanging on to the past. PSk31, APRS, IRLP, and satellite is

> the future, so we should stop saying amateur radio is only HF and Morse.

No that is incorrect. PSK31, APRS, IRLP, and satellites are the
present. In fact, satellites are fairly old hat. Been in orbit since
the 50's. I guess we better dump em cuz they are old hat , huh? Being
so old, it couldn't be possible for them to be very useful anymore.
Right?

> The military does not use MOrse anymore, they use ALE type signals, which is
> faster, and almost error free .

So? I'll alert the media...

Those of you that have been around for a
> while should get off your "Extra or Advanced" horses and get some new blood
> into amateur radio.

New blood? What are you talking about? None of my rf devices use
blood. Is this a new amplifier cooling technique?

Also a Tech (no code) IS still an amateur, so we should
> be treated like one.

Well, I've never kicked or slapped a no code tech yet. Where's the
beef?

I hear it all the time, Im speaking to someone about
> some technical topic, and they happen to be at QRZ.com and look up my call.
> Then they say how come your only a tech? didnt you pass the code test? i say
> no and dont want to be bothered. "well its been good talking to you, 73" is

> advanced, or extra! can you set up a packet node, or work a satellite via a
> digital mode. NO, gee i guess that morse code is really good!

What? If the no code tech works new fangled modes, will he forget all
this if he upgrades? What will happen to you if you upgrade some day?
Will you turn into a veggie overnight, or will this be a gradual
transition to a state of mental blankness? I work all these new
fangled modes, but still prefer cw if I'm just getting on the radio to
have a few relaxing qso's. Its more fun. Most new fangled modes are
actually pretty boring once the "new" wears off. Myself, I think you
are worrying too much about what others think. Who cares what they
think?

And many don't. So?

If a "general" is confronted by one of these CB'ers
> they say "well your so smart do you know Morse code" CB'er replies "NO!!".

Why is the cb'er confronting the ham? Dunno, he sounds kind of
hyperactive to me...

> That amateur will either leave or will find what channel they are on and
> throw a carrier or send code with his friends. This is not the way!!! "cant
> we all just get along"

Well, which is it? If the ham leaves, wouldn't he then be a non issue?
If he gets on the cb band and causes interference, he's a bad boy.
Riley will deal with him someday. If he sends code to his friends, he
would then be a non issue again. Crap....You've got me confused....

>

I guess that I have to chuck in my 2 cents for what it is worth.
1) I do enjoy listing to phones. It use to be fun when Dial a Drug was in full swing and you could listen to your neighbors phoning for a 8 ball of coke or a few points of heroin. Now they have all gone digital and it is just a bunch of old ladies talking about what they are going to cook for supper. The police and fire here are also in the 800 MHz band crypted digital.
2) I was on CB back in the 70s and 80s and also ran out-law with a self converted Kenwood TS-520. I do remember the fights and vandalism, (cutting coax and pulling antennas down) that was going on back then by the CBers. I liked the camaraderie of the local hams so I got my ticket to get away from the bs on 11 meters. Now I noticed that some bands like 2 meters are starting to go like CB went in the late 70s dead keys and echo machines on the repeaters and I wonder if this is because we have removed the CW filter allowing the problem children from CB into the ham ranks.
3) From the latest statistics I have heard is that Ham is having a 1 % per year growth and I think that is good but most of the new hams that I have run into give it up in the first year or two because of the interference on 2 meters and the, "this is my repeter so get off" come backs. This is what will kill us for sure.
4) CB was put in the wrong place on 11 meters and the governments are now finely rectifying that with FRS and the like on UHF. I would like to see FRS get more power, 5 watts or so and the use of repeaters but it is questionable if that will happen.
I guess that I have said my piece and now to watch the TROLLS and FLAMES come out.

I've been using a regular TV hybrid splitter with good results for
several years. I use RG-6 coax and "F" to BNC adapters to connect to
the scanners. There is some signal loss, but unless you are in a
really weak signal area it works fine.

With everyone getting these wireless X10 type cameras I'm wonder, can these images be received with the Icom R3 radio?

Anyone have experience with this?

Thanks,
George

Generally they start at about 902MHz. Not sure the upper limit, but I would guess no higher than 925Mhz...

Correct me if I'm wrong, but does it really server any purpose to hide the Shuttle Launch time after two scrubbed attempts???

Lets see, Thursday it was to launch at 1944, on Friday it was to launch at 1922. Would it be reasonable to assume that Mondays launch time would be 1816?

I don't think it would take a Rocket Scientist to figure that out....

But if I'm wrong please correct me, I guess we'll see on Monday when they release the official launch time.....

I wouldn't think it is a fact of trying to hide anything - more of
just a coordination plan based on the many contributing factors it
takes to make it happen. Here is a link that I watch for the launch
news: http://spaceflight.nasa.gov/latestlist.html
For anyone interested, here is a link that provides live video feeds:
http://makeashorterlink.com/?F17A259F

BTW - thanks for the uplink. It was a new experience listening to the
weather pilots while watching the live video feed.

Are you understanding the way a scanner operates? It will run in SCAN mode and keep finding
different active frequencies as it does so, but it won't stay on that frequency forever once the
transmissions stop. As soon as no one transmits, the scanner will continue scanning until it finds
the next active frequency, and on & on. You will have to step through each channel that contains
a frequency with the MANUAL button and hit the DELAY button for each, activating the delay
function for each. This will hold the scanner from scanning for a few seconds after a transmission,
allowing you the chance to hear the response to that transmission before it returns to scanning the
rest of the channels. If the response is a few seconds in coming, you may miss it anyway because
the delay will only hold it for a few seconds (generally 2 seconds on many scanners). To stay on
something you want to specifically monitor for some time, you will then have to press the
MANUAL button to stop the radio from scanning, and hit SCAN to bring it back to the scanning
mode. You can also access any particular channel, while in manual mode (not scanning) by just
punching in the channel number and hitting MANUAL - it will bring you directly to that channel
and hold it there. If your local police are in your radio's channel 22, and you see a police car race
by out your window, hit MANUAL, 2,2, MANUAL, and the radio will stay locked onto the
frequency for your local police until you hit SCAN again. The PRIORITY function was explained
in another post and will check whichever channel you designate as such, every several seconds,
while the scanner is either scanning or sitting on one channel in manual mode.

3749. Speech Inversion descrambling

Newsgroup: rec.radio.scanner
Date: 2002-06-01 23:22:33 UTC
From: ctpds49@aol.com
Message-ID: <20020601192233.19790.00002304@mb-ba.aol.com>
Source record: 47665

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

That's one thing I like about my R3, it has a Audio/Video out. The quality isn't the best in the world, but it's acceptable.

I'd also like to find a frequency list for these things. I guess I could just walk into a store that sells them with my R3 and stand there and scan for it... ;)

I really don't see much whining about those issues in the newsgroups I read. And even if there were, isn't that what usenet is for? If you don't like those posts, don't read them.

> instead of whining about these issues, why dont you find something else
> constructive to do with your time. bulid an antenna, make a reciever or
some
> other gadget. Then you let others know what you are doing and someone
> improves on your idea.

I built all but one of the antennas I'm currently using. I have a couple more homebrew antennas in storage that I built for the fun of it but don't have a use for. I'm also currently in the middle of building a 10 MHZ WWV receiver. I also have plans to build a QRP transceiver in the near future. Have you built anything lately?

> Cellular Scanners-- Why do people want a 800Mhz full coverage reciever
> today. Most areas are using some form of digital service, and not even in
> the 800 band anymore. What is so interesting about listening to
cellphones?

Maybe it's just something else to listen to? Or maybe some scanner listeners just don't like the idea of the government telling them what frequencies they can and can't listen to at the behest of the cellular telephone lobby? Or maybe they'd like to have a scanner without any gaps so they'll be able to listen to new services that take over the 800 MHZ band once it's vacated by analog cellular phones in the future.

> Morse Code-- have you looked at new licenses lately, looks like our ranks
> are dropping. Ive been a Tech(No-Code) for three years and would like to
use
> HF but could care less about morse code. Its an antiquated mode, which had
> its time, although still usefull sometimes, if we keep saying we need
Morse
> code, us amateurs will be way behind times(which we still are).

AM is also antiquated, second only to CW. Yet there are many hams who enjoy using AM. It's also the primary broadcast mode in the MF and HF bands.

Should we scrap the use of AM? CW is fun to those of us who enjoy it. I'm not going to tell you not to use FM in the VHF/UHF bands.

> Amateur ops always complain about how 11m was stolen and CB'ers dont
> know anything.

Frankly I've never heard an amateur op complain about the 11 meter band being stolen from them. CB has been around for around 50 years now, so I think there are few hams who really have a hangup about losing the 11 meter band. As far as CB'ers not knowing anything, I guess you never heard one saying "QRT and standing by." Yes, there are a few who are really technically savvy, but the most aren't. I could tell you many funny stories of technically-challenged CBer's, but frankly I don't give a rat's behind what goes on on the CB band.

> If a "general" is confronted by one of these CB'ers
> they say "well your so smart do you know Morse code" CB'er replies "NO!!".
> That amateur will either leave or will find what channel they are on and
> throw a carrier or send code with his friends. This is not the way!!!
"cant
> we all just get along"

This has me confused. If a CBer is talking to an amateur on an amateur frequency, he is operating illegally. If an amateur is using amateur equipment on the CB band, he is operating illegally. I've never heard CBers & amateurs talking to each other on the radio though.

> Steve Bossert , KC2GOG (tech and proud of it)

Tom Sevart, N2UHC (Extra and just proud to be a ham)

> and i dont need to hide behind an alias like some others out there!!!

Well I like listening in it is somewhat humorous at times, I also listen to corless phone occasionally it is funny to hear peoples day to day life and also around me there is a booming drug area it good to know when you don't want to be somewhere. I find the conversation very interesting and unboring.

Anyway is part of the scanning be able to scan things that say it can't be done. I work for a PD MDTs are boring to me cause I see the info all the time but people like to intercept those tranmissions and get the info. So what is boring to me might not be for others

3763. Help identify CSI add-on board mod to Pro-2026

Newsgroup: rec.radio.scanner
Date: 2002-06-02 15:25:36 UTC
From: david <ddlee@houston.rr.com>
Message-ID: <QNqK8.61130$9z5.4045334@typhoon.austin.rr.com>
Source record: 47679

Picked up a Pro-2026 at fleamarket yesterday. Has a CSI 1.0 add on board inside. The board outputs to a user installed 9 pin D-connector, as if an RS-232 port? I assume it's some type of CTCSS, DCS and DTMF decoder, but can't find any info on it thru google.

Internally, it looks as if the mod basically redirects 2 motherboard to display board connectors to the add on board. When I power on the scanner, I have audio noise but no other control.

Not knowing how it works, I'd hate to scrap the addon board and resolder the unit back to it's original configuration.

3764. FS AOR AR 1000 (NO GAPS!)

AOR AR 1000.

I just don't have the interest in scanning that I used to, so here's
your chance to own a piece of history. This is a pre-ban hand-held
scanner (you can listen to cellular if you are into that sort of thing).
Wide range: AM FM W-FM. Comes with operating instructions, whip antenna,
telescoping antenna, and rechargeable batteries. $100

If you want to e-mail me, remove the TAKE OUT from my address.

>
> PH

You actually bought one of these things? I could see it useful if you're using a portable and REALLY have a need to monitor that ONE time they may pass "encrypted" when out with your portable...but why waste your money on one if it's for a base unit? The last time this was spammed, someone said "just use your computer". It's a lot easier than you would think, especially with a SoundBlaster sound card that has "EAX" audio control, which most of them do.

Thanks

3768. Pro-2052 and Antenna Help

Newsgroup: rec.radio.scanner
Date: 2002-06-02 18:35:06 UTC
From: "Roger D. Cravens, Jr." <ke4yqz@kc.rr.com>
Message-ID: <atmkfukea4i88knjkamo5pa253p7jhle8a@4ax.com>
Source record: 47684

From what I've read here, the scanner(s) are used primarily for indoor/table top use instead of in your car. This makes this a bit easier.

I would strongly recommend you give Grove Enterrpises a call. They have an ourdoor antenna called ScanTenna. It resembles a spider, but from many years of expereince with this antenna I can tell you that it simply blows away all other omni-directional antennas that I've tried. It was designed for exceptional capabilites for very wideband operation (25MHz thry 1300MHz). Others that I recommended this antenna to later either left me a message or called and told me the exact same thing. It currently costs approximately $50.00 and comes with free 50-feet of coax.

I've tried my Scantenna with my PRO-2052, BC 780XLT, BC-245XLT, and my BC 200XLT. One thing I will add here is my recent purchase of the Radio Shack model PRO-2052 scanner. I am exceptionally pleased with it's performance. It is one of the best scanners that Radio Shack has ever hit the scanner market with. It has 1000 channels, the speaker is exceptional for sound, and it's ability to pick up weak signals is one of the best scanners that Radio Shack has ever made availalbe. I'm not going to go into a lot of specifications here - just suffice it to say that it really is an outstandng radio in my view.

If you would rather wait to putchase this antenna, I would call Grove and ask them for a copy of the antenna spec sheet that comes with this antenna, and you can make up your own mind. While you have them on the line, I suggest you ask to speak to their antenna expert for additional advice on what antenna might be the best for your particular situation..

I don't work for Grove nor do I have any on-going financial dealings with them. But I have been a loyal customer of their's for over 7 years - I have absolutely no gripes or complaints.

Here is the information on Grove in case you (or anyone else) doesn't happen to have it:

Bob Grove
Grove Enterprises
7540 Highway 64
Brasstown, NC 28902
(800) 438-8155

They even have an 800-number so you won't be out anything except for the few minutes it takes to make the phone call.

I would not, however, go by your local Radio Shack store and ask them questions about scanners and/or antennas. The overwhelming number of workers for RS doesn't know the slightest thing about which antenna or scanner would or would not be best for your situation.

As another alternate solution, a "scanner beam" antenna would not be out of consideration either. From a personal standpoint, I've owned a "Scanner Beam" I purchased from Grove. I honestly didn't think it was worth the cost. My Scantenna honestly out performed the Scanner Beam.

After a year I took it down from the rotater on my house and replaced it with the biggest television beam antenna I could afford to buy. The new antenna was flipped from horizontal to vertical. It had in its design wideband FM/VHF/UHF capabilities. That was over three years ago and it's been outstanding - at least for me. And yes, I purchased it from Radio Shack. They do beat many others on price, and this was the case in my decision to purhase it.

Good signals and I hope this may have helped someone.

Roger D. Cravens, Jr.

Also from another answer/response:

You can go to RadioShack and get a pre-amp for the scanner. They will need to special order it.

The base version is 940-0858 = $49.99
The handheld version is 940-0859 = $39.99

The difference is that the handheld version can go directly on the back of the scanner and the antenna onto that, whereas the base version you'll need another BNC wire to go from pre-amp to scanner (assuming it doesn't come with one; not sure. ask RS people)

You'll need a 9v battery or 9v AC-DC adapter for either one:

(273-1767 = $8.99)

BTW, I am not a RS salesman. I just have one of their catalogs. Very handy.

3769. Re: ICOM R-2 Question

Message-ID: <z2rK8.20305$Z6.226861@nnrp1.uunet.ca>
Source record: 47680

The r2 is the best out there unless you need trunking
It does not do trunking but for me i dont need trunking
the cttss tone board is built in so Its awesome for me because the
opp(ontario provincal police) use tones on their radios and I get all the
action(for how long anyone?) but I hear they may be switching to a digital
system soon
Make sure you get a canadian or euro model so that no freqs are blocked
US models have blocked freqs that you can not get
(free speech my ass)tee hee
As for tuning freqs it is quite easy once you get the hang of it It does
have a learning curve to it and it is not your usual uniden or radio shack
crap Once you learn to use it you can dail in a freq very fast I think it is
better then a keypad
It is also very sensitive with a better antenna The stock antenna is ok but
an after market antenna is way better
I got a Watson 881 Super Gainer and it really pulls in the signals It kinda
looks funny on top of the R2 cause it is 16 inchs long and you need a sma to
bnc connector but it is the best antenna yet that I have tried I also
purchased a Comet 501 SMA stubby antenna and it is great for steath work in
public where I dont want everyone to know I am monitoring the airwaves This
antenna is 2 inches long and looks so cool on a R2 It is a small package and
very handy I sound in love with my R2 but I AM Its a great little radio and
would not trade it for any other radio
Please let us know If you get this little beauty so we can all help you get
started with it
There is a group of us at yahoo groups call the icomr2 group that is very
helpful and a vast resource of information
One more thing
You can program the R2 with your computer it is so cool check it out there
is software at the group files section so you just need a cable to hook it
up
hope this sways your decision
Regards
fryertuck65@yahoo.ca

My R2 is pretty deaf. Poor performance on the AM and FM broadcast bands. Mediocre performance on SW. VHF-UHF is not bad. I'm using the factory antenna. Maybe I need to get a good aftermarket antenna?

Also, I wish it offered SSB mode and could tune in 1 khz steps. Lowest it will go is 5 khz.

You are correct, there is no keypad. You enter frequencies by tuning them in the VFO mode (you can tune quickly by "jumping" across by MHz, then tune fine by stepping by kHz). Once you've tuned to the channel, you can enter it into memory. Not a very swift way of loading memory, but it's not something you would do often. The R2 is a very sensitive rig, but I wouldn't recommend it to someone looking for their first scanner.

I am in need of a new cordless phone for home use.

I want a digital spread spectrum model for privacy.

But I also want something that is wall mountable as it
will be in a kitchen.

Have my eye on the Siemens models..... but since no
local dealer I can't eye ball one in the flesh. See
link

http://www.siemenscordless.com/crdless_phones/4015slvrblck.html

Can anyone out there tell me if there 4000 series units
are wall mountable?

If they are not......any recommendations on a cordless
phone with above specs?

Sure. The Sears 3/4 HP Scan-O-Matic (make sure you get it with the cellular option). All you need to do is press the Auto Listen button when you're near her. They go for about $149. If you're farther away, you may need the 1.0 HP model.

Don't lead the poor boy astray! What he wants is the Husqvarna
PowerScan500 with the wireless camera control and optional bagger
attachment. Sure, it costs a little more, but you get a Husqy engine
instead of the wimpy Briggs and Straton that Sears uses.

> Over the Memorial Day weekend tune your scanner to the
> GMRS frequencies and take note of what you hear. For example:

Around here it's all data and business users (usually contractors) from 8:00 AM to 5:00 PM Monday through Friday, and the local MediaCom install truck dispatcher. Outside those hours it's dead silence.

And you thought it was for "General" use... Nope, here it is for business use. And as someone who has paid my 75 bucks I find it really annoying.

These comments are from my SCANNER RADIO REVIEW BRIEFS faq article. The price info is out of date:

R-7000: 1986 vintage. At about $1000, this was once the top | VHF/UHF receiver. 99 channel, multi mode coverage from | 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can | be expanded to 198 channels by adding simple switch to pin | 19 of memory IC8. Tuning knob lets you tune through parts | of the spectrum much easier than using the SEARCH mode on | conventional scanners. Selectable USB/LSB allows reception | of new amplitude compandored sideband (ACSB) stations. S- | meter doubles as discriminator meter to aid tuning. Useful | search and store feature, reminiscent of the the Bearcat | 250, searches between 2 limits and automatically stores new | frequencies into channels 80-99. Audio and control | interface for tape recorder. Noisy relay, activated when | the receiver is tuned to frequencies above 520 MHz. | Searches and scans slowly but can be sped up to about 12 cps | by adding a resistor. Too big for permanent mobile use, but | too nice to leave alone in the car. If you don't want to | spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac | of VHF/UHF receivers. 900 channel, multi mode continuous | coverage from 25-2000 MHz. The radio RF/IF/AF portions of | the R7100 are similar to the older R7000, but the R7100 is | constructed using surface mount parts. Both the R7000 and | R7100 are much more immune to intermod than the | Uniden/Bearcat 760XLT and the portable PRO-43. The firmware | in the R7100 is much more sophisticated. 9 banks of 100 | channels. Further, you can associate each channel with 1 of | 10 groups. Many possible ways to scan. 10 pairs of search | limits. Search and store ("memory write") scan mode lets | you store 100 frequencies instead of the 20 in R7000. | Another R7100 improvement is that you can program up to 100 | channels for the R7100 to skip while searching. R7100 has 2 | VFOs ("windows"). Both the R7000 and R7100 scan slowly | compared with PRO-2004 and PRO-2006, and that's a drawback. | Both the R7100 and R7000 employ a noisy relay, activated | when the receiver is tuned to frequencies above 520 MHz. | Scanning a mixture of VHF and UHF frequencies serenades the | ICOM user with a very annoying clickety-clack, clickety- | clack! For Baseband Audio out, I mounted an RCA jack on the | back of the R7100A and connected it via shielded cable to |

the junction of resistors R228 and R230 on the Main Unit. |
This point is located in the vicinity of IC15 and X3 on the |
schematic

At the time I bought it, I didn't know about the programs available from the
computer. I basically bought it for mobile use anyway, so it worked out in
my favor. I bought the smaller kit, so It really didn't set me back all
that much, as I separately purchased a case and jacks, etc., making the
whole thing fairly reasonably priced.

Based upon the picture, I would assume that it would be. The little black area under the earpiece is the give away to that. That would be where the hook holds onto the phone when it is wall mounted... I don't have any outright knowledge of the phone, but that is my best educated guess...

Ok, forgive me for my ignorance, but could I improve my scanner reception by sticking a straightened coat hanger (or any other metal wire-type material) in the antenna socket and sticking it out the window? I live in a condo.

Just looking for an inexpensive way to pick up more stuff. I'm using an RS telescoping antenna for my handheld and notice little difference in performance from the rubber ducky it came with.

Thanks in advance.

Using the TV Splitter is no real problem and works just fine with the RG-6 75ohm cable. About the only problems you get into running passive splitters occurs when certain frequencies generated by one scanner gets into the other scanner and locks it up. If you're in a real hot-bed of transmitters (like you live next to the Police Dispatch Office) you can have problems where the energy from those transmitters goes into your receiver and mixes with other frequencies subsequently generating frequencies (intermodulation frequencies) which once again locks up your scanners or makes a bunch of crazy noise.
I personally am running 12 (twelve) scanners via 3 passive TV splitters with a 30db amplifier in front of the splitters. I do not have a lot of trouble with "on-site" interference though there is some. I do not live in or near an RF HOTBED. As long as you live in a fairly benign RF area it isn't a real killer issue.

Make yourself a groung plane antenna out of a chassis mount connector from
rs.
a quarter wave antenna for 144 mhz optimum reciever and transmit performance
is calculated:
234/144 multiply by 12 gives you 19.5 inches
solder a wire from elec to brass rod to center pin of chassis mount
connector, from the metal bracket you have chosen to mount the connector to
add three counterpoise element's running down at a 45 degree angle. make a
small loop on them and bolt them to the chassis mount connector underneath.
use the same math as above for any freq you want to listen to.

If your local system is Motorola digital, and recent, it's APCO25,
and the new scanner should work.

Unless it's encrypted, of course.

Try a Radio Shack Mag Mount scanner antenna or go to
GroveEnterprises <http://www.grove-ent>
they have a small mag mount antenna. I us a Radio Shack Cellphone mag
mount,
mostly for trunking but its' good down into the civilian aircraft band,
but it needs an adapter.
Which should be available at Radio Shack
A lip/gutter clamp mount is another way to go, with out drilling!
Scanner World may have them.

I have had an R2 for some years now and I really like it. At the time it was the smallest scanner that took AA batteries and may still be. I really like the idea of being able to get batteries anywhere if my Ni-Mh's go flat. I like the performance and size. Small enough to always have on you, Easy to hide if the need be. I use it both with and without external antennas. I would purchase the programming kit and some nice 1800maH
Ni-Mh rechargeable and a good charger. Mine lasts ages on 1300maH. A few of my friends have purchased one after using mine.
The only bad thing I have to say about it is that there is no SSB and the belt clips brake quite easily but are also cheap.

> Have my eye on the Siemens models

I own a Siemens 2 GHz spread spectrum cordless phone.
It is the worst cordless phone I have ever owned. The
display menus are awkward to navigate. At least 1 out
of 4 calls made with that phone are illegible. The person
at the other end usually complains of only hearing the first
syllable of each word and the rest is "cut out". Switching
to my other cordless phone usually solves the Siemens
problem.

That's my experience with Siemens cordless phones.

OK Joanne thanks.

Any cordless phones that you WOULD recommend that is
DSS ....and wall mountable?

Also... should I stick with 900 mhz to avoid
interference..... or is 2.4 gig OK in that respect
also?

Entry is pretty easy. I'm not familiar with your unit, however generally most bearcats are all the same. Get the frequencies for your area, find an empty channel in the scanner, and type in the frequency (xxx.xxx). Press the enter or "E" button. Move to the next channel, and start the process over again.

This is off topic, but I see CharterMI... What do you think of the latest news? Price increase again... Getting to be ridiculous in my opinion. It's been less than a year since the last increase, if my memory serves me correctly...

Yes you could. You may even find that you do not need to straighten it.
With scanners the only rule is that the bigger and higher the aerial the
better. You will also have success with welding rods, electrical wire and
any other metal objects that you can connect.

Happy Scanning

RustY

> Any cordless phones that you WOULD recommend that is
> DSS ....and wall mountable?

I don't have any more experience with the DSS phones other than the Siemens one that doesn't work all that well. My other cordless phone is a 900 MHz Panasonic model (non-digital). Siemens' claim of "crystal clear extended range" caught my eye in the store. Heh! I guess their marketing department works better than their phone engineering department ;-)

> Also... should I stick with 900 mhz to avoid
> interference..... or is 2.4 gig OK in that respect
> also?

I guess choosing which band is one of those "well, it depends" answers. Any interference may likely first arise from other cordless telephone users nearby your house since all cordless phones operate on the same channels. I've yet to encounter interference from outside sources like cell sites, public safety, or amateur radio.

Any scanner that receives cell phones will do. As long as you are in the
same cell as the woman you will hear both sides of the conversation with no
breaks. You do not need a high powered scanner at all but maybe a quick
scanning one would be useful. How will you know what frequency she will be
assigned by the system ? - you won't. You'll have to scan quickly through
all possible frequencies deleting other conversations until she makes a
call. You could be there for some time !

I did broadcast during BCR as well as Spring Break and Bike Week.
However I will say that without a question BCR was the worse for police activity but the fewest amount of people attending.

Living in Daytona beach I'll take BikeWeekers ANY DAY!

Bikeweek had over 500,000 bikers attending.
BCR only had 100,000 people attending, but the police had to spend over 250% more funds than they did during bikeweek.....

I'll be broadcasting the NASCAR Driver/Crew comms during the Pepsi 400 4th of July weekend....

3829. Will I hear anything on these aircraft frequencies PDX?

Newsgroup: rec.radio.scanner
Date: 2002-06-03 17:45:06 UTC
From: doidy1@juno.com
Message-ID: <3a26ea1.0206030945.318ca696@posting.google.com>
Source record: 47645

Hi, I just purchased a used Regency scanner for aircraft frequencies.
The crystals installed were for the following frequencies:

118.10
119.80
118.70
124.90
126.90
119.00
121.90

will i be able to pick up anything in the Portland area? I am about 8
or so miles from the airport and am using the telescoping antenna.
The receiver picks up 118-128 mhz. Is there better crystals to get
for this area, and if so what frequencies and can these still be
purchased at Radio Shack?

thanks,
LP

Everyone make sure everyone bookmarks this one.

The last one broadcast from there was great. How many listeners at one time was there. Like 200??

Pepsi400 ??? I though that was in Michigan in Aug. and somewhere else at another place. But not in Florida.

Will have to watch that race.

I just confirmed, the Pepsi 400 is at Daytona this year, July 4th. I do plan on broadcasting.

During the Daytona 500 I did the live scanner broadcast of Driver/Crew freqs and had 120 listeners. However I had only advertised I was doing the Daytona 500 several hours before the race. At the time I was having problems figuring out how to get the live broadcast to work. Only got the bugs worked out a few hours before the race. I'm sure we'll have over 200 for the Pepsi 400 as I'll advertise more and sooner....

I use a Sanyo DSSS phone and it sees quite a bit of kitchen exposure.
it works very well, has good audio, good range, and I've been using it
for a couple years with very few problems (battery life is an issue
these days because one of the spring loaded connectors doesn't always
make contact with the phone in the cradle).

There are worse phones for sale these days...

Source record: 47504

Hello!

I Have a Radio Shack Pro-70 Hyperscan Scanner. Any recommendations for an antenna upgrade?

I'm also getting an old Radio Shack Pro-2035 Base Scanner.
I have a CCrane Antenna that clips on to my Shortwave [forget what its called but its basically a long length of wire on a reel with a 1/8" + a clip for clipping directly on to an existing anntenna.
Will the above help with the Pro-2035?
THANX! Mike Miketeachr@aol.com

Go to http://www.airnav.com and you can look up the frequencies used at any airport. You
may be able to get the crystals at RS, I don't know. If not, there should be somewhere on the
net where they're available.

Hi John,
Almost *any* modern soundcard will work with WACARS but you need to accept
that as good as it is, Wacars is not the best decoder out there. If you can
stretch to a Creative Labs Live! card or equivalent, then get one of those
and then go click on the link below for more ACARS info.

You might try a piece of wire with an alligator clip on each end. One end to your scanner antenna and the other to the window screen. Be sure to pick or scratch a paint free spot on the screen.

Dick -

You said that right. I bought some gear from Steve a while back; I can't remember if I made good comments about him in the newsgroups after the fact, but if I didn't, I do now. His item was exactly as described, he was a gentleman throughout, and he went out of his way to send many, many pictures via email. I agree with you 100 percent, I would deal with him again without question!

3851. Re: Alinco DJ-X2T

Newsgroup: rec.radio.scanner
Date: 2002-06-04 02:37:46 UTC
From: Bob_Parnass_AJ9S <bob@parnassXcutX.org>
Message-ID: <3cfc281e$0$1411$272ea4a1@news.execpc.com>
Source record: 47518
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Here is a portion of my Alinco DJ-X2T review
in December 2000 Monitoring Times:

Performance

"We borrowed two DJ-X2T scanners for testing. The first one (s/n
T000521)receives all FM signals accompanied by a high noise level
and further testing shows the radio to be defective.
The replacement DJ-X2T (s/n T000818) performs better.

Audio from the thumb tip sized speaker is sufficient for listening
in a quiet room, but far too weak for use in a noisy room or outdoors.
DJ-X2T volume may be set at one of 20 discrete levels and we had
to set it at levels 17 and 18 in a quiet room.
Our IC-R2 easily has the best audio of the three scanners,
with the VR-500 in between. Both have larger speakers than the DJ-X2T.
It's best to use the DJ-X2T with an earphone.
The supplied ear bud is padded, fitted with a subminiature (3/16ï¿½)
plug, and reproduces sufficient, pleasant audio.

A squelch tail is the noise burst (ï¿½kerchunkï¿½ sound) heard
at the end of a transmission. We measured our DJ-X2T's
squelch tail at 100 ms. The accompanying chart shows our VR-500's
tail at 35 ms and our IC-R2 has a brief 10 ms tail.

Our DJ-X2T is remarkably sensitive except for a deaf spot
near 500 MHz. The 145 - 160 MHz band is peppered with intermod
products from pagers and a 162.4 MHz NOAA weather transmitter
while using an outdoor antenna. Our VR-500 and IC-R2 are much
cleaner under the same conditions, with the IC-R2
having the least intermod of the three scanners."

Bottom Line
"The DJ-X2T is at its best when used in discrete situations.
While powered by the internal battery, the DJ-X2T's ultra slim
profile and ability to use the earphone for listening let you
monitor virtually unnoticed. Drawbacks include low speaker audio,
long squelch tail, and the membrane keypad.

We prefer the VR-500 and IC-R2 for most listening situations.
When listening on the internal speaker, the thicker IC-R2 and
VR-500 provide much better audio and are easier to use.
They are still small enough to carry comfortably in a
shirt or jacket pocket."

Well, the 7000 is a pretty old design, it came out in 1986, I think. The
7100 is the replacement model. It scans faster and has more memories,
and usually the 7100 is slightly more sensitive. I personally would take
a 7100 over a 7000, but either one would make me happy.

AFAIK, Motorola will continue to offer NON- APCO P25 radios to agencies that prefer to go another direction. Most public safety agencies will likely go P25 of cource, for interoperability. Motorola won't be the sole source, either.

3857. VB program to control the PCR1000 + source code

Newsgroup: rec.radio.scanner
Date: 2002-06-04 08:03:45 UTC
From: jjintokyo@hotmail.com
Message-ID: <8bf90b78.0206040003.643677c@posting.google.com>
Source record: 47523

Dear All,

First, thanks for this great group.
Over the last couple of weeks, I have created a Visual Basic program to control my PCR1000. It is very simple and not so fancy, but it does all the basic things quite well, including scanning.
If you are interested in getting a copy, including the source code, send me an e-mail at jjintokyo@hotmail.com and I will give it to you.
Hopefully, after you see how easy it is and providing that you have the VB compiler, you can enhance it, improve it and make it look better.
Although there are plenty of good software available, there is nothing like writing your own. You can customize and make it look exactly the way you want; it's a great feeling and it adds a lot, to the fun of using the radio. At least for me :-)

I would appreciate your questions, comments, suggestions...
Let's share our code.

JJ in Tokyo, Japan.

3859. BC780 400mhz squelch problem

Newsgroup: rec.radio.scanner
Date: 2002-06-04 11:36:47 UTC
From: Troy Walter <Twalt@hotmail.com>
Message-ID: <ufp9hlhvk89k71@corp.supernews.com>
Source record: 47525
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Is there a way I can modify my BC780 so that the squelch in the 400mhz range is the same as the rest of the freqs? The squelch in the 4XXmhz range on my scanner is set way too high (or low, depending how you look at it) so that when including 4XXmhz freqs, it stops on static. I could set the squelch to the 4XXmhz range, but then I would miss a lot of weaker traffic on the other bands. Its really frustrating! Thanks in advance

Found on : http://www.bc780xlt.net/awh780.htm

Squelch Modification to eliminate different threshold settings between VHF/UHF - RT-3 is the internal adjustment for NFM and RT-7 is
for standard FM, these can be reached by removing the bottom cover.
After tweeking and measuring for some time I found the optimum settings. (No help on the huge hysterisis problem. Sorry) Set two
channels up on a UHF frequency like 446.0000 MHz. One on standard FM, the other on NFM. Carefully adjust the minimum squelch
threshold on the standard FM channel. Switch to the NFM channel and try to do the same. Note the position where they closed. If they
were the same DO NOT DO ANY ADJUSTMENTS. If they were different, go back to the standard FM channel and carefully set the minimum
threshold again. (be as close to the edge as possible) Set the scanner to the NFM channel and very carefully adjust RT 3 to where
the noise stops. That should make both of the even. Test the two modes back and forth to verify they set the same. YOU'RE DONE.
I tested this across all frequencies and found it worked well if you did this on a UHF frequency. All other bands behave well. UHF
is very sensitive on this radio. Squelch breaking on different bands is a little different but close.
It was a good idea that Uniden made a separate circuit to do the upcoming NFM channel spacing. The federal government has been using
NFM for a while. Uniden did it right. Volume is boosted on NFM to compensate for the lower deviation FM. Selectivity is tightened to
reject better. Good job Uniden! Too bad they did not set the squelch better in the factory.

The 800mhz band is also using NFM, so I would still have the same problem.
I only have a few 4XXmhz freqs, so will stick with changing them to FM.
After looking at the squelch open chart on the link you so kindly posted, it
looks like the 400mhz range is set much lower than the rest of the bands,
which gets really annoying and is really too bad it had to be that way.
Anyway, thanks for the help, and the link!

You're right about "bigger and higher is better", but also be aware that "too much" antenna can cause the receiver to overload, making reception of even strong local signals difficult. If you put a long wire on a VHF/UHF scanner, you may run into this problem, in which case an in-line attenuator (or smaller antenna) may be necessary. A decent sized telescopic whip tends to be the best choice for VHF/UHF scanners when portability is required, or a discone mounted on the roof outside for when a base unit is being used. TV antennas will work well, too, if you happen to have one available.

But to answer the original question: a piece of coat hanger MAY improve the reception over a rubber duck or whip antenna, but it may not, too. It may only improve at certain frequencies (where the coat hanger is a multiple of a 1/4 wavelength of the received signal, for instance), but may not offer any improvement elsewhere.

I'm surprised that the RS whip doesn't improve things...my experience has been just the opposite. Your location could be a factor as well. VHF/UHF radio waves really only propagate in a line-of-sight fashion, so if you have tall buildings or heavy foliage around you or are only trying to pick up distant stations, the antenna may simply have to be higher.

Also, be careful not to ruin the antenna connector when using "non-standard" antenna materials!

- Doug

If they are the cheaper units that are analog, and use voice inversion.
Basically, if they sort of sound like Donald duck, then it should work fine.
The units will work with any voice inversion descrambling, 25-channel
cordless, FRS, etc. As long as it's voice inversion, it will work, no
matter the source.

I wonder if these initiatives may also, in the long run, have the effect of shutting independent content producers out of the market again. If the current oligarchy of media interests are able to control the hardware for the purpose of preventing LEGAL copying, they could certainly be tempted to exploit this control for the purpose of preventing competing interests from getting a leghold on the market, and forcing artists to sign those evil contracts that appropriate all of their original work and indenture them to the media conglomerates.

One of the things that really infuriates me is that when I purchase blank cassettes, CD's, or minidiscs for the purpose of recording my own original music or video, I pay a tax to Celine Dionne and Michael Jackson!

If I were to buy a gun and ammunition in the U.S., no one has the right to deny me or charge me extra for it on the assumption that I was going to do something illegal or harmful with it. Same with a crowbar or gasoline or spray paint or superballs or chlorine or pesticides or whatever. It is a tribute to the lobbying power of the industry, that they were able to persuade the government to presume that everyone buying a blank tape is going to do something illegal with it, to continue to allow sales of the alleged tool of felonious subterfuge, and then sur-tax it!

How ? Maybe I'm dense, but I don't see it.

> forcing artists to sign those evil contracts that appropriate all of
> their original work and indenture them to the media conglomerates.

This is an old argument. Artists vs managers. Artists create. Creative folk often lack the skills or the inclination to see after their own business interests. That's what makes them artists. Business folks like managers will probably always be one step ahead of them in the business arena. That's their turf. But in my book it is _certainly_ a legitimate debate about the economic value of the art and artist without the business types. It's the business folk who risk the money to develop, promote and market the art - - mostly with no assurance at all that they will ever see a profit. This contribution - - career direction, development, etc - - often (in the early stages of an artist's career, when s/he could just as easliy decide to go back to painting houses or being a waitress or go back to school) is mostly overlooked when the artist "makes it". The tendency is to just say, "well he was destined to do this. . ." The managers are viewed as leeches and vultures because they get to share in the wealth that they helped to create.

Sadly, this is already happening. Thanks to the do-gooder liberal politicians,
several jurisdictions now impose a surcharge on the purchases of guns and/or
ammunition. The proceeds are used to fight "gun violence", compensate victims
of "handgun related crime", or other such nonsense.

Hey Y'all. Well, I am not completely new to scanning, but it has been quite awhile. Just recently purchased the BC780xlt (which I love) and a RS pro-92 (which is great for cruising around my house). But, I have a few questions.
I currently have two programs for the 780, the scanpro, and winscan780. There are things that I like and dislike regarding the two programs. I like the interface with the winscan, And, I like the seach function with the scanpro. Is there a better program out there that would have the interface of the winscan but also include the great searching function of the scanpro? Any reccomendations would be greatly appreciated!

Also, I'm curious about a local EDACS system. Livonia, Mi I only live about 10-15 miles from the city, yet, I cannot receive anything from the frequencies I have. (Which I have checked on multple sites) And, I have tried just tuning in with fm mode to find the control channel, and I get nothing. It seems to me, that being within 20 miles I should get something, even if it were very full of static. Is there something I'm missing with the programing (besides LCO, which I have)?

Also, would love any recomendations regarding antenna. I have a condor antenna that I'm using now with both scanners, which seems to work well. But, are there others not requiring roof mounting or anything like that, which are better than either the condor or the RS telescoping whip (center loaded I believe)

Oh, and how do I mod my bc780xlt to receive cellular? (Just kidding!! <grin>)

Thanks in advance,
breezyjr (joe)

The way, for example, independent musical artists could never get played on the radio in the past, not even on a local station, or get his or her records on display at the local record store, or get booked for an appearance on TV, or get his song used in a movie, etc. The only way to make a living from your music was to sign on with Columbia or RCA or Warner Bros, and accept their contract terms and promotion. Radio stations simply stopped playing anything that didn't come with a major record label on it. They black-balled anyone who didn't knuckle under to the industry.

If you like convergence, no problem. If you don't mind finding out that your newspaper is running an article on Madonna not because some editor decided that she is "significant" but because the parent corporation ordered them to, because she has a new record, and movie coming out...

Movie theatres also generally will not play any film that is not part of a package offered by the major distributors. (If Hollywood's product was really so great, there would be no need for those restrictive contracts between theatres and distributors, that require distributors to show bad, unsuccessful movies in exchange for the right to show the hits.)

Please check out Tom Petty, Michele Shocked, Ani DiFranco, Jane Siberry, etc. At the very least, it is clear that many managers and "business folk" are cheating and lying to the people they represent.

> (in the early stages of an artist's career, when s/he could just as easliy

> school) is mostly overlooked when the artist "makes it". The tendency is
> to just say, "well he was destined to do this. . ." The managers are viewed
> as leeches and vultures because they get to share in the wealth that they
> helped to create.

Some of them are, some of them aren't. Many of them pressure their clients into signing deals that confer extraordinary rights upon themselves, to control

and exploit the work of the artist. Some agents actually represent the record company while "negotiating" on behalf of the client! Some agents, like Brian Epstein, were well-meaning and did help their clients succeed--- but even Epstein arranged several deals that were very bad for the Lennon-McCartney song-writing team and the Beatles ended up losing control over their own music.

I have limited sympathy for good, conscientious agents, the same way I have limited sympathy for honest lawyers. But in each case, my sympathy is limited by the failure of that profession to clean itself up. If I were an agent, I'd press for a code of ethics, like a "Good Housekeeping Seal", that artists could use to judge whether they are likely to be handled fairly and responsibly or not.

Bill,

It sounds like you have given this issue a lot more thought than I have. And you sound like a well-meaning, if slightly embittered guy. Let's go have a cup of coffee sometime. I suspect we'd get along.

Managers take advantage of artists. Sadly, it's happened since folks found out that there was a way to make money off making music. I don't like that.

But in general, I don't share your paranoid "they're out-to-get-us" world view. Personally, over time, I've found that trying to change an entrenched system like the music biz is a task that will break you. Instead, I prefer to work within whatever system prevails, and make a living along the way. If the music system sucks, then maybe it's time to do something else.

You'd probably say that I've sold out whatever ideals I may have started with. I prefer to think of myself as a realist.

Hi have a nice radio shack pro 90 300 channel trunk tracker scanner forsale.
This is a hand-held scanner in good condition.
Comes with ac/charger rubber duck and battery pack.
The battery pack i think needs a new one it holds a charge for about half
and hour.
Scanner works great.
You can download the manual for radio shack website.
$125 shipped lower 48 states ups insured.
Please e-mail me direct or for pics of scanner.

Thank you for your thorough response Doug. In response to the reception issues, there is indeed a tall building directly opposite to me but also plenty of open air as I'm on the 13th floor. I think the material this building is made of may be causing the bad reception as I notice a difference when scanning on my balcony. There are many "dead zones" inside as I scan.. I think I will start a new thread about why these "dead zones" might exist even where there are no electronics around.

> You're right about "bigger and higher is better", but also be aware that

Interesting.... I'll have to try that. I've had problems in the 400mhz
range ever since I got my 780. If one frequency (say 460.5) comes up
active then the transmission ends, it always stops on the next few
400mhz freqs in the bank.

Today, Intel CEO Craig Barrett gave the keynote speach at SuperComm 2002, a huge trade show for people who are "in the know" in telecommunications circles.

Today, he delived that speech. And what he said is absoultly horrifying. Most people use computers to pirate music, movies and software, and most of those computers have Intel CPUs in them. Can you guess who The MPAA & The RIAA are looking to with thier pocketbooks wide open for support now? Yep, you got it. Intel CEO Craig Barrett.

The idea is to put code in the CPU that would prevent the copying of DVDs, CDs and other medias that they [corporate america] decide that we shouldnt copy. I will be posting followup news stories on this thread as I get them. A friend of mine who is at the convention just called on his cell to let me know of this little bit of news.

You are reading this story before the media gets it. Because they dont even know yet. I broke the story.

This is where the industry is going, and I dont like it. Oh yeah, and I have the news story before all of the networks. CNN dosent have anything yet, I just checked. I will also post a text of his keynote speech as soon as I get ahold of it, since I broke the story.

3899. Need manual for Pro-30!

Newsgroup: rec.radio.scanner
Date: 2002-06-05 05:16:50 UTC
From: vhfradiobuff@aol.comspamsux
Message-ID: <20020605011650.05014.00000077@mb-cq.aol.com>
Source record: 47565

Does anyone have a manual for the Radio Shack Pro-30 scanner? I'd like either a photo copy or electronic copy. If you can help me, please email me directly. Thanks!

<sklam@theriver.com> writes
>you are right, I did Simply hit the wrong group.

Err, no you did not "Simply hit the wrong group", you selected nine
groups without considering their applicability to your requirements. Few
people in Australia and the UK will have heard of "pima couny sheriff"
much less be able to receive VHF or UHF over such a long distance.

>And I'm ever so sorry for
>the horrible waste of your precious time! Can you ever forgive me? I will
>never bother your elite personal newsgroup again! Oh ya I will also never
>answer any of your posts or point you in the right direction again.

Unfortunately you found one of the few "little learning" types we have
to endure.

>SO, go
>crawel back into your mothers pouch and hop away you putz!

Difficult to do both I think.

>Raytheon missile and defense systems Engineering div.
>Tucson Az USA

Now that worries me, it worries me a lot!

I also own the Siemens 4215 and besides terrible battery life, I think it is great. Menus take a little getting used to as well. I think this was their attempt to make home phones more like cell phones.

You have to order it from rat shack. Also, go to pro-92.com for good info on radio. I just bought a pro 2056 that uses this software and had to order it. Don't let them sell you that 14.99 software they have behind the counter. Does not work for these radio's.

For one thing, this has nothing to do with radio scanners - for another, Intel is not going to go along with any such idea , as long as Mircrosoft Windows Media Audio And Video are around. You dont know what you are talking about. To accomplish this, Intel would have to rip out half of the MMX commands in their CPUs, rendering them significantly slower than most of their competitors. This is something Intel just does not need, coupled with a mass exodus to AMD, which would cost Intel billions of dollars. I will repeat here an old adage which still holds water today : "If you can play it, you can copy it". The recent debacle with CDs that had a chip imbedded in them proves the point quite nicely. What people did was, they simply played the CD into their sound card, Using a CD player, instead of ripping it digitally, and then made an mp3 out of the resulting WAV file. Its now widely available all over the place. As a matter of fact, people made a point of doing it, just like they did after Metallica sued. Everything Metallica ever did is available now....

Yeah I like Uniden real well..... but doesn't seem to
be anything that is wall mountable in their line up.

Unless I am wrong abt this maybe?

Is your wall mountable by any chance?

Hi Steve,

Very reasonable point, but if everybody preferred to work within the system, the system would never change, and we'd still have slavery, women wouldn't be able to vote, and your wages would be about 50 cents an hour, and Microsoft would rule the world..... oops.

Oddly enough, it appears to be the music industry that now wants to roll back time, to an era when the internet and digital music did not exist. It's a pretty wimpy approach for an industry that was founded upon rapid change and innovation.

Was Rosa Parks wrong? The truth is, I think, that you and I benefit enormously today from the sacrafices made by people who were willing to buck the system and paid the price for doing it.

You have to break a few eggs to make an omelette...

Bill

They sentenced me to twenty years of boredom

Yeah, Yeah, Yeah.

I do agree. And I'll cheer you guys on. Really I will. Change the world. Honestly, I'm all for it. I mean it. (No wink or nod here - - I'm serious.) It's just a matter of where to focus one's energies.

And I've made a ton of money "working the system". (not the music biz). Nearly all of it has been in well-established venues where video is welcome.

I guess my credo would be this : "Pioneers get the arrows. Settlers get the land."

3912. Live NASA & CAP Comms for Shuttle Launch

Newsgroup: rec.radio.scanner
Date: 2002-06-05 16:04:35 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3CFE3693.2000000@licensed4fun.com>
Source record: 47577
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner

The shuttle is due to launch today at 17:22:48 EDT. I have a scanner online broadcasting Kennedy Space Center freqs from security, fire, launch support as well as the STA (Shuttle Training Aircraft).

Also included in this scan are the Combat Air Patrol freqs of the fighter patroling the skies over the Space Center.

Closer to launch time I'll lock the scanner to 126.6500, the freq used by the STA. About 1 hour before launch the STA will fly approaches to the shuttle runway as well as climb and measure the cloud heights. 99% of the time it will be from data he reports which will lead to scrubbing a launch.

I'm located about 40 miles from Pad 39-A and can pick up most of the comms pretty well. It should make for some interesting scanner.

To listen go to http://www.MilAirComms.com and scroll down until you see the section "LIVE AUDIO! Daytona Beach FL".

Have fun,
George
http://www.MilAirComms.com <- HF, VHF, UHF Military freqs and more!

Ah, but the question is which one will program the same... Radio Shack has a whole bunch of manuals online too, but none for the Pro-30. I am sure it's overly complicated, but I'd like to get a copy of the manual anyway.

I am looking for anyone that actively monitors the Beachwood, NJ fire department. I know they use county fire freq's for dispatch, etc, and I have those lists, but I'd like to know specifically which ones are used for what. If you have the information, please let me know.

Please, no responses asking me to go to "this URL", etc... only looking for those with first hand knowledge of the freqs used.

And you're under arrest on three counts of violating the Telecommunications Privacy Act:

(1) possession of a receiving device capable of receiving cellular telephone frequencies
(1) illegally monitoring cellular telephone frequencies
(2) publicly disclosing information received through said illegal monitoring activity

And now we are all accessories to the crime, dammit!

(just teasing ;^D)

i am sorta of a newbie in the groups. I have a question about the block that the police can do when they have something to say back to base, and they switch over to secure. all i here on my end is static. What is this called? How does it work? And is there anyway to decod it or here it on another freq. Please help answer my question.

Thanks

3919. Q: Radio Shack "Center Loaded" Antenna???

Newsgroup: rec.radio.scanner
Date: 2002-06-05 18:41:56 UTC
From: miketeachr@aol.com
Message-ID: <20020605144156.07825.00003203@mb-fg.aol.com>
Source record: 47585

OK!!!

So; I have a:

Radio Shack PRO-70 50 Channel Scanner, and
Radio Shack 40 Channel Transceiver

both handheld.

I bought a Radio Shack [man i should buy some stock] "Center Loaded"
Telescoping Antenna.

Q1: What is in the center of the center loaded antenna? Whats in that Bulge?
Circuitry? Some Coil? An Elf? A Creamy Nougat Center?

Q2: The Directions say its for transmitting from 130-535 MHz. Are the 40 CB
Channels in this range?

Q3: The directions say you 'must always collapse the section located just above
the loading coil'; or damage to antenna and/or radio may result. What kind of
damage? The Antenna might bend? The radio might explode? I'll accidentally send
the GO codes for our nuclear arsenal?

Q4: If indeed i CAN use this to transmit on CB; whats up with this 'you must
calculate the 1/4 wavelength and adjust accordingly' stuff? Math is involved?
Does it really matter? It says i can damage the radio due to an improper
Standing Wave Ratio? Why are SWRs dangerous? Are they mad at us? What did I do
to deserve this?

Q5: For receiving on my scanner; the directions are telling me to extend
different sections of the antenna depending on what frequencies im listening
to? Whats the best 'happy medium' for my scanner. It scans 29-512 MHz. I dont
think they want me to adjust the length for every frequency. It scans 50
channels a second, and I cant adjust an antenna 50 times a second.

Q: I thought this was supposed to be easy. Where did I go wrong?

Seriously, Thanks in advance if you made it this far.
Any/all responses appreciated.

Mike

Have them in control of the "presses" of the music industry.
Think of this phrase:
" Freedom of the press belongs to those that own one"

The same thing could apply to the music recording and motion picutre
industries,
meaning if you want to manufacture and distribute content, you have to pay
them to do it,
or buy a "press" like theirs.

Another antenna that works great (I have it on a older Bearcat and reception shot up with no intermod) is a fm antenna that can be mounted unto any pole. I have it up top of a camper I use as my ham shack just hooked loosely to rail on top. You may need to get a adapter from radio shack for the cable or put the right end onto the coax yourself.

Radio Shack no longer has software for the PRO-92. The freeware Win92 program is the best there is but if you really want to buy a program, try Scanners Unlimited.

The PRO-2053 (not PRO-2056) uses a different program called Win93, also written by the author of Win92. As with Win92, Win93 is the best there is.

I am interested in telephone transmitters. My uncle was in the CIA for 23 years and he would know the answer but currently he's on a business trip in Asia so it's hard to contact him. My question is I saw a UHF telephone transmitter (about $250) and another listed under low prices for about $60(non UHF). Same range it says. Whats so good about UHF? Also could you pick up the 110-130MHz cheap transmitters and the 400Mhz UHF on a pro-43? thanks

Dave

Years ago, our sheriffs dept just used to switch off the repeater so only dispatch (and smart scanner buffs in close proximity) could hear their traffic. That was what they considered going 'secure'.

I recently purchased a Scannocular. I was wondering if anyone knows
if there are any mods for this scanner, such as restoring the
30.00-50.00 band? Thanks!

If 18th century American colonists felt that way, there would have
been no revolution.

Likewise the French in 1789 and the Communist bloc nations in 1989.

The 'dead' spots are usually caused by the metal in your building, although other building materials can absorb some of the RF energy. Nothing beats a good outside antenna using good feedline.

It is a coil.

> Q2: The Directions say its for transmitting from 130-535 MHz. Are the 40
CB
> Channels in this range?

No. The CB channels are between 26.965-27.405 MHZ.

> Q3: The directions say you 'must always collapse the section located just
above
> the loading coil'; or damage to antenna and/or radio may result. What kind
of
> damage? The Antenna might bend? The radio might explode? I'll accidentally

In what context? There are some ways that damage can result, but I need a
little more information to understand what they're talking about.

> Q4: If indeed i CAN use this to transmit on CB; whats up with this 'you
must
> calculate the 1/4 wavelength and adjust accordingly' stuff? Math is
involved?
> Does it really matter? It says i can damage the radio due to an improper
> Standing Wave Ratio? Why are SWRs dangerous? Are they mad at us? What did
I do
> to deserve this?

A transmitting antenna must provide a good match to the transmitter. In
this case, and in most cases, 1/4 wavelength will provide a good match. 1/4
wavelength for the CB band is approx. 102 inches. However, you can shorten
an antenna by adding a coil to part of it. But from what you described
earlier, this antenna won't work on the CB frequencies for transmitting, so
it won't provide a good match. With an antenna mismatch, part of the signal
transmitted from the transmitter will be reflected from the antenna to the
transmitter, aka standing waves. This is usually measured as Voltage
Standing Wave Ratio (VSWR), more commonly known as SWR. A high SWR reading

means that there will be high standing voltage in your feedline, which will eventually damage your transmitter. You may have heard CB'ers talking about "blowing thier finals." It is the final power transistor that overheats and melts down due to high SWR. In a best-case scenario, a mismatched antenna will only put out a crappy signal.

> Q5: For receiving on my scanner; the directions are telling me to extend
> different sections of the antenna depending on what frequencies im
listening

> think they want me to adjust the length for every frequency. It scans 50
> channels a second, and I cant adjust an antenna 50 times a second.

You really don't need to worry about it. If you're scanning frequencies around 29-60 MHZ, extend the antenna all the way. For UHF frequencies, shorten it. Just find a happy medium between the highest and lowest frequencies you listen to and set the antenna there. Most of the time you won't notice much difference.

> Q: I thought this was supposed to be easy. Where did I go wrong?

You didn't. You came to the right place for help.

Tom

> Circuitry? Some Coil? An Elf? A Creamy Nougat Center?

A coil of wire. It allows the antenna to be "longer" without it being
too long.. it's a comprimise.

> Q2: The Directions say its for transmitting from 130-535 MHz. Are the 40 CB
> Channels in this range?

No, CB radio is in the 27 mhz range.

> Q3: The directions say you 'must always collapse the section located just above
> the loading coil'; or damage to antenna and/or radio may result. What kind of
> damage? The Antenna might bend? The radio might explode? I'll accidentally send

You could bend/break the antenna or the antenna post on the radio.

> Q4: If indeed i CAN use this to transmit on CB; whats up with this 'you must
> calculate the 1/4 wavelength and adjust accordingly' stuff? Math is involved?
> Does it really matter? It says i can damage the radio due to an improper

See the above answer about CB freq's

> Q5: For receiving on my scanner; the directions are telling me to extend

Just find a happy medium, depending on where you want to listen.
Chances are you will still hear everything you want to hear if you put
it around the halfway mark.

3955. Freqs for Paramedics in Ocean County NJ?

If memory serves... rec.radio.scanner was set up in late '89 or early '90,
but it's been a while.

I don't have any relationship to the seller, but I think anyone who
is looking to buy a scanner should consider bidding on this. The
sale price for new ones is $179. Take it from there.

Does the "section located just above the loading coil" short out the coil when it is collapsed, perhaps? With the coil shorted, the whip would then become a true 1/4-wave in the VHF/UHF ranges for which it is designed for transmitting. With the coil left in, the electrical length would be longer resulting in a poor match (and possible finals damage)...you wouldn't be able to easily tune it for 1/4 wave without a SWR meter and/or antenna tuner.

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists. On here you will find lists of Ontario radio frequencies that are not listed on any web page, published in any scannner book (Haruteq or Scantrix) or listed in the government frequency list (Industry Canada's TAFL). The Ontario Frequency Guide mailing list (oufg) is for scanner radio hobbyists so they have a public forum to be able to chit chat with each other about anything relating to the radio scanner hobby in Ontario as well you will be able to recieve updates of what changes I have made to the Ontario Unlisted Frequency Guide web pages.

Med Trans uses 462.975 (tone is 123.0) to dispatching / flightwatch.

I don't know if they have their own discrete channel for patient reports (I'm in another part of the state), but Greenville (city / county) uses 155.340 MHz / 123.0 Hz tone, 463.075 / DPL 364 and 463.125 / DPL 364 for contacts with area hospitals.

Emergency Situation Report e-mail list for Pennsylvanians

PA-SitRep is a free, 100% non-commercial,
nonprofit, e-mail list and web site.

The PA-SitRep emergency traffic e-mail list is a
tool that will enable you to monitor and report on
major emergency situations throughout the State
of Pennsylvania including weather emergencies,
natural disasters, environmental disasters, civil
disturbances and threats of terrorism, major fires,
and manhunts.

Subscribers are encouraged to utilize their home,
work and cell phone e-mail addresses for receiving
messages from the PA-SitRep e-mail list.

Because messages posted to the list are limitted to
situation reports of MAJOR emergency situations
within the State of PA, message volume on
PA-SitRep is EXTREMELY low.

PA-SitRep is also building a list of PA-SitRep
Contacts, most of whom are Amateur Radio
Operators (http://www.pa-sitrep.com/contact.htm).

PA-SitRep Contacts monitor our higher volume
SitRep/Discussion mail list and post situation
reports ot the discussion list and to the main list.
PA-SitRep Contacts also submit their contact info
for our site and may be contacted for a first
hand situation report should an emergency
situation arise in their area.

Please visit the site to learn more:

http://www.pa-sitrep.com/pasitrep.htm

Thanks. We'll look forward to your participation.

Like the other guys, I recommend Win92.

For information on software and cables (you nee a cable, and it's not
trivial) go to www.pro-92.com (make sure you include the "-" in the
url) and look for the software and PC interface pages.

The discussion board there is excellent if you have questions or want
to talk about your scanner.

Well you first have to find out who dispatches them MICOM or CENCOMM. You
can try MICOM at 155.1750 but that is for Northern NJ. And do you want the
MED channels that is the paramedics to hospital frequencies.

Well my friend when they say go secure that means they might be useing a frequency that is not listed. In other words in my department ever so often are radios get reprogrammed and a frequency is picked at random and that is the secure frequency that nobody knows. Then there is radio encryption but logistically how many department can really afford it, or will pay for it. Unless you are dealing with a major city it is probably a frequency you don't know aand it might be as simple as them just jumping on the DPW frequency like I have seen other departments do.

Look they are better ways of spying on someone I would rather go with the electrical oulet transmitter works forever, and you get all the conversations inside the house. But to answer your question UHF is the way to go, answer is easy the frequency range of the cheap one is actually 88 to 108 Mhz they have a tendecy to be unstable and the person you are trying to bug might find out when they turn on the radio to listen to music and as they turn the dial they hear themselves. Not a good thing. Besides the fact so did everybody else in the are just heard the same. I'm figure you are either spying on the wife or kids, you don't everydody knowing you biz. UHF is the only way to go but if you have a realtive in the CIA ask him for the good microwave shit longer distance and nobody but you and Uncle same could hear.

From: Den6N <djmr26@bestweb.net>
Message-ID: <ufv2treh6gmud0@corp.supernews.com>
Source record: 47400

There's no internal battery in the 2026. There are THREE leads on the back of the radio,
however. In a mobile setting, you would connect the red and black leads normally for power to
an 'ignition' tap, that is, one which is only hot when the car's ignition is on. The third lead, an
orange one, is to be connected to a 'battery' tap, that is, one which is ALWAYS hot, even when
the car is turned off. This way, you won't lose the memory when you turn off the car.

Check your cigarette lighter -if it works when the ignition is off, you can run the orange wire to its
hot lead. OR - you can connect both the red & orange leads to this 'battery' tap, and use the radio
with the car ignition on OR off. BUT you'll have to remember to turn the scanner off each time you
turn off the car.

In a base/ indoor setting, it's best to do what I did. I dug up a 9-volt battery connector (I pulled
it out of an old AM-FM portable) and wired that to the orange lead (and split the black lead -
you need the black lead to go to the negative connection for both the red and orange leads) and
piggybacked a 9 volt battery on the radio's case with some tape. It's a 12 volt radio, but 9 volts is
enough to hold the memory.

Come to think of it, it may be advantageous to have that 9volt on there even if used mobile,
so you won't lose the memory if you pull the radio out for some reason or disconnect the car's
battery.

Charge #1 is false. It is not illegal to own a device capable of receiving cellular telephone frequencies. If that were the case, all pre-ban scanners would be illegal, and as we all know, it just isn't so..

But since your post was meant in fun, I'll let it go this time... :)

Breaker 1 nine: I think we've got us a convoy. Thats a big 10-4 rubber duck..... Very educational conversatioin here.. The conversations I have heard on amateur radio are usually searches for parts for their radios. I bought a crystal police scanner for $5. Put a new electrolytic in it and turned it on for some anit-crime action. Dead as a rock.. They've all gone to digital trunk systems. Makes a good weather radio if you can stand listening to a computer try to talk english. Marko

3995. Re: Freqs for Paramedics in Ocean County NJ?

Newsgroup: rec.radio.scanner
Date: 2002-06-06 19:44:26 UTC
From: Dave <ws2l@NOSPAMoptonline.net>
Message-ID: <uYOL8.42420$tK.9985897@news02.optonline.net>
Source record: 47411

If I remember correctly the dispatch frequency is 155.205 and I would imagine they use the standard medic frequencies.

463.000 468.000 CH 1
463.025 468.025 CH 2
463.050 468.050 CH 3
463.075 468.075 CH 4
463.100 468.100 CH 5
463.125 468.125 CH 6
463.150 468.150 CH 7
463.175 468.175 CH 8
462.950 467.950 CH 9
462.975 467.975 CH 10

CH 9 & 10 are Admin frequencies, CH's 1-8 are the frequencies used between the Medic's & the Doctor's. I believe the 463 frequencies you can hear both sides of the conversation if not, you will have to program them all in.

Good Luck,
Dave

3996. Trunked/Digital radio

Guys,

I've been saying this for over 20 years, back when I was with RCA and they where fighting with Hollywierd on "time shift recoding", and people thought I'd taken leave of my senses, but the end-game of the content producers, be they publishers of books, CDs, computer software or what have you - the ELIMINATION of the doctrine of "Fair Use". The content providers want to have that determination transferred to THEIR control. The end result will be that they will define the only fair use of their product as total and complete "pay per play". Every time you play that CD you THINK you own, you'll pay - everytime you boot up your computer and use MS Office, you'll pay.

Yes, I understand their first attempt at this (DIVx) bombed big time, but with the DMCA and bad bills like the Hollings bill, you can bet the cost of your entire CD & DVD collection they will keep on coming back and bribing our Congress (remember Mark Twain's ole quip about Congress "being a uniquely American criminal class" until they get what they want.

Those greedy bastards are NOT going to give up - sad thing is we have to win each battle, whereas they only have to win one to screw us.

It's a plain, old, standard RS-232 cable. Male DB9 on one end, female DB9 on the other. Pin 1 connected to pin 1, pin 2 connected to pin 2, etc.

Buy one at RS. Cheaper than building your own.

Another good reason to use a credit or debit card when making major purchases.

Common policy with most retail stores is have corporate issue a check for refunds over $100. Most stores just don't keep enough cash on hand to cover major returns.

Also, when I make major Radio Shack purchases I always seek out "company owned" stores instead of "franchised" stores. Franchised Radio Shacks are usually mom and pop operations that have very short return periods (usually 14 days) and can give you a hassle. Company owned stores all offer 30 day return periods. Franchised stores are usually found in small towns. Ask the employees and they will tell you if the store is company owned or franchised.

Most companies do it from a store security point. Don't have more than 'x'
amount of cash in the draw. Pretty universal throughtout the retail market.

Yup. I purchased an R3 specifically to hunt for amateur video
bugs.

I've also picked up wireless camera images at SFo while waiting for a
flight and cameras in a few other public places. Usually very boring
shots of very boring entrances.

I've yet to find a hidden camera in a bathroom or anything else a
client was afraid I would find.

It depends on the version you have, there was the Original, an A model,
and a B model.

The 3-wire is the early version. Get the service manuals and update
the memory circuit to the A or B models. (2 leads)

This involves removing the 3rd lead and installing a 1/2 Farad
backup cap in place of the original one.

154.205 - Fire
155.580 - Police (repeater on this freq)
155.640 - Police

For Sauk County

155.310 - local govt freq, police call says "sheriff tactical"
155.775 - local govt freq, police call says "fire"
155.820 - local govt freq
155.700 - police
159.180 - roads

These are all from police call so I'm not sure which are active.

Funny, I always thought the phones used TDMA for the cell part, and the Two way radio part was iDEN. But, this little snipit you posted seems to state otherwise. Hmmmm, I'm a cell phone nut, and I didn't know that. Of course my knowledge leans towards Tri (quad) Band GSM phones.

In fact, I was just thinking about this post about 10 minutes ago, whilst drinking my coffee. I thought, hey, the Nextel uses TDMA for phone and iDEN for radio....I think that is strange, how things come up like that.

Thank for the info, although I was not the original poster.

Why has this radio received such poor reviews. Is it really that bad. I believe one website even stated something to the affect of, Don't even "THINK" about getting the IC-R3. Then they mentioned another product, that utilized a 9"crt B&W tv. Who wants to carry around a 9" B&W tv around? Kinda defeats the purpose of being stealthy (if that is one's intent) I think it would look a little strange walking around the city with a 9" tv tucked under your arm, picking up video.

It would seem to me, that if your purpose is to search out wireless (or hidden) cameras, the IC-R3 would be perfect, and work well. I can understand if it has poor performance in the regular Public safety bands.

Anyone have any info on this radio? I am still consiering getting one. Kinda just for the heck of it. I would like to go around and "see" if I'm missing anything above the normal 1.3Ghz where most radios stop their coverage.

Please advise,
Thanks in advance!

4021. Data slicer for 780 & other ???

Newsgroup: rec.radio.scanner

Hey Y'all. I'd like to start off by saying. It may sound like I know what I'm talking about, but in fact, I still don't have any idea.
What I'm looking for is an easy way to tap into the discriminator output in my 780. I have seen, on a couple different websites, data slicer schematics, but I have no idea what all those pretty pictures mean. I saw on one site a link to three manufacturers that all produce a 2 or 4 slicer. But, I still don't have a clue on how to tap into the discriminator circuit. Does anyone have a site they know of that has pictures, or at least a very detailed listing of how to do this? I am so confused. In some of my research, it seems like I just need to run a wire from the discriminator to the sound card, others say it requires a serial port connection. One of the programs I have picked up has the following choice for input, sound card, serial port, or internet connection. Are there sites on the internet that provide a live feeds for the purpose of decoding different digital signals?
If any of you believe since I have no knowledge of elctronics, I shouldn't even attept this mod, please feel free to tell me so. This is not something I feel is a requirement for scanning, I'm just interested in the info out there.

My other questions has to do with radios in general. I just got back into scanning. Went out and got the BC780, the pro-92, the Radio Shack DX-398 (SW radio), and of course I still have my modified Yeasu FT50R, that I use to monitor the local Fire Dept. I'm possibly looking for another radio. I would like to know if the Wideband radios are worth it. The ones that recieve from like .1Mhz to 1.3Ghz or higher. I don't want a another base/mobile scanner, unless y'all figure the AOR8200 MKII is worth it, or the Icom radios. Personnaly, I was looking at the higher end Yeasu, ICOM, or AOR receivers. Not interested in Tx, just the receivers. I'm looking into getting the ICOM IC-R3, but still want to get another Base receiver.

Before I start rambling, I'll just end this here.
Any help would be greatly appreciated.
BTW: How do you (with the large radio shacks) listen to all those radios. I have seen some pictures where guys have like 5-7 radios and even possibly quite a bit more. How do you keep track of all those radios? Can most of them be 'puter controlled, or can you only control one at a time?

I had forgotten how much fun scanning can be. And, now I want to get back into it with both feet. SInce now I have the funds to get whatever I want. (that wasn't bragging, just trying to point out, when I scanning before, I was in college. College = No money for radios.) But, I still don't see the need for a $2,000 or $3,000+ radio, at least not for me.

Thanks for all your help. I look forward to be an active member in these NG.
Oh, and BTW: I'm still looking for Edacs help with Livonia Mi. Can't seem to receive their signal, even though I'm within approx 15 miles of that city. Seem, If I can pick up Detroit (400Mhz band) 30 miles away, I should be able to hear Livonia.

Boy, I ramble a great deal in the morning. Thanks for reading.

Daytona Beach once again is running a prostitute sting. I'm
broadcasting this channel live. Go to http://www.MilAirComms.com,
scroll down til you see "LIVE AUDIO! Daytona Beach, FL" then click on
where it says "Click Here to Start Broadcast"

Sit back and listen as you're listening to the Daytona Beach Police VICE
frequency (talkgroup) live.

Well...

Chicago PD has a 7 channel trunked system used for mostly
Investigations, Surveilances and special details. outine dispatch is
still conventional UHF. CFD is on VHF and EMS is on UHF.

Cook County is still on VHF but will be switching to an Astro system
sometime this year. I don't know how much of it will be digital and how
much will be analog yet. The system is currently in use at the Jail and
Courthouse in analog mode.

The State Police in Cook County are on 2 10 channel EDACS systems that
share many common talkgroups.

Lake and Will Counties both have EDACS systems for Sheriff and other
county operations. The Will County system also supports many local
agencies as well.

Several suburbs have Motorola Type II trunking systems, including Elgin,
Naperville, Aurora, Schaumburg and Streamwood/Hoffman Estates. Northwest
Central Dispatch also has an Astro system that is used by Buffalo Grove,
Arlington Hts., Elk Grove, Mt. Prospect, Palatine and Mt. Prospect.

PACE (Suburban Bus Operations) also has a Type II system, and there are a couple SMR's still around. There are a few company 900 MHz systems as well as a couple 900 MHz. SMR's. If you have LTR capabilities there are a bunch of 800 and UHF LTR systems as well.

I was hoping someone could help me with this. I live on the 13th floor of a condo in a big city, and I'm using a PRO-39 with a Radio Shack 20-006 (handheld telescoping) antenna.

The problem is about "dead zones" all around my place (I don't know if that's the right term). When I get a signal, and I walk around, the signal gets picked up, and dropped, picked up, and dropped.. unless of course the signal is relatively strong.

This even happens outside on my balcony. If while doing a search I move the scanner to the left, maybe I'll pick up something new, or if I move it up, for instance, maybe I'll lose what I had.

Who knows how many signals I'm losing because of this. I suspect it's also causing some weak signals or making me lose signals that I would otherwise be able to receive. Does anyone know what causes it and how it might be avoided? I'm assuming it's probably what my building is made of. Also, my balcony is closed to the left, right, and the top, so maybe that's why this problem occurs there as well.

This issue seems to be keeping me from taking advantage of a high scanning point. I'm sure that I could get much better performance from up here!

4030. Upcoming digital system - Cleartalk??

Newsgroup: rec.radio.scanner

I work for a town in Central Illinois who, until recenly have been using a countywide Ef Johnson multinet system. However, it seems that the system falls short as far as reception in several areas, causing them and a neighboring city to revert to an older 400MHz system.

Anyway, the point is, they are conducting studies for a new radio system. I have been talking to the comm director and he mentioned something about them utilizing a systemt that is being put in place by the Illinois State Police. Said it was a Motorola product called "Cleartalk".

Has anyone heard of this? Will the new Uniden digital scanners be able to decode it?

Any info appreciated.

George, I remember one time they were running a reverse hooker sting right at my corner, so close that I thought I'd try picking up the "hookers" body mikes. A lucky guess found them between 173-174 MHz, and it was interesting to hear the dialog between the make-believe hookers and the johns.

Here in Daytona they have a bug along with a repeater. From what I have learned they keep a van stationary (in today sting it was at our local marina). The van receives and records the conversation received by the bug. The repeater is located in a car that is close to the hooker. I have yet to find the output frequency of the repearter they are using. One of these days I'm going to drive (or park) in the area they are running the sting with a frequency counter to see if I can snag something.

The repeater must have a good output because where they are picking up hookers is sometimes located 5 miles or more from their staging area (where the van sites).

I agree.

And I'll cheer you on. I may even jump on the bandwagon at some point.

But, this is not something I feel passionately about. maybe I'll change my mind about it at some point. But until then, it's not my fight.

Actually, the medics in Monmouth County are privatized. They work for
a company called MONOC, and are dispatched by them. In Middlesex
County, the medics are dispatched by "Med Central" out of Robert Wood
Johnson hospital in New Brunswick, last I knew of. In Ocean County,
they are dispatched by the Sheriff's dept.

Typical illegal CBer / pirate attitude.

> If they use any illegal
> equipment who are they harming?

Not true, and you know that. This case is clear cut. There are still many businesses users on those channels, and there is nothing in the rules that says they have to leave either! So the idiots running the high power on the MURS license free channels are in fact interfering with the current legitimate users of those channels. The power is deliberately kept at the 2 watt level, or less in many cases, to limit any interference to other users on the same channel.

For example there are two fast food outlets, and a "Laser Quest" Laser tag game hall, all within a couple of miles of my apartment. All use the same MURS channel frequency. None of them have a problem because the TX power is kept very low. You get more than a quarter mile away and you can't even hear them any more. Now if you get some idiot running 50 watts, by using a modified Ham 2m rig illegally on MURS, which could easily cover a 20 to 30 mile radius all round, the interference problem becomes huge.

> Nobody.

Talk about being out of touch with reality. I'll bet you didn't even think about the problem.

Not quite answering your question, but if they are experiencing problems with a regular trunking system, they are REALLY going to have problems with a digital system... Instead of staticy communications, they will have none at all. Digital is either their, or it's not. There is no in between...

SHINWA SR001 RADIO SCANNER FULL (nothing blocked) 25MHZ to 999.995MHZ range; NOT modified!; Remote control, 200 Channel memory.

Detailed Description
This is the SHINWA sr001 radio scanner. This features FULL (nothing blocked) 25MHZ to 999.995MHZ range; Remote control; Original owners manual; 200 channel memory (10 Groups of 20 channels); 2 Antenna connections: BNC and "N"; AM, FM-Wide and FM-Narrow operations. 3 resume scan modes: Carrier, Audio and Timer (programmable up to 19-second delay!); front headphone jack. The chassis is the size of a standard car stereo and uses a 12 Volt power supply.

This radio has been great! It looks VERY sharp and has an unbelievable frequency range! Selling because I don't use it any more as I recently purchased a handheld HAM radio which can do everything I need.

I have NEVER installed this radio in a vehicle. It has sat on my desk hooked up to a 12v power supply or been in the closet. I'm sure the internal battery condition is good (no meter or other means to test). The display is beautiful and has a multicolor signal meter!

Any questions please contact me!

Check out this auction!!

http://www.ubid.com/Actn/Opn/getpage.asp?AuctionID=527929689

THANKS.

Okay.......Here's a 'newbie' question.......

What is MURS? What's the acronym stand for? Where can I get more
information on MURS?

Thanks!

Luke,

If you are going to write software to clone and control
radios, I urge you to produce software which is not restricted
to Microsoft Windows. Design it to run on multiple
platforms, e.g., Linux, MacOS X, BSD, Windows, etc.

Here are a few web resources.

Links to ICOM PCR-1000 protocol:
http://www.gcn.ou.edu/~jahern/home/pcr1000/

Uniden Models BC895XLT, BC245XLT and BC780XLT
Radio Shack Models Pro-2052 etc:
http://www.freqofnature.com/software/protocols.html

ICOM CI-V protocol:
http://www.plicht.de/ekki/civ/

HAMLIB - Ham Radio Control Libraries:
http://hamlib.sourceforge.net/

AOR AR-2700 (ugh!)
http://www.mv.com/users/wje/aor.html

Check out my web site, www.parnass.org, for free, open source
radio software, too.

On Sat, 08 Jun 2002 09:56:48 -0500, EEBYGUMTIM (Luke) wrote:

I wish I could help you. All of the scanners I have seen, have had the date codes on the very back of the case. By looking at the PC board, that will certainly give you a good start...Of course the scanner could have been made in 2000 and just happened to have used a 1999 board. That's how it is with one of my mom's scanners. It has one year on the PC board, but we know for a fact, it was purchased the next year. No big deal, though. Of course, it's very possible that the date code sticker could have come off, too. Catch you later.

> Any info appreciated.

The State Police system is called Star-Net. It is believed that this will be on the upcoming 700 MHz. frequencies, but that is unsure as yet. Since no one really knows when these freqs will be released it is possible that the system can be initially set up on 800 MHz away from the Chicago area. The system will be installed and owned by Motorola and airtime leased to the ISP and other agencies.

ClearTalk is a SMR system built by a consortium of electric utility cooperatives in central and NW Illinois. While there are some public safety use most of the users are electric utilities with some business users on it. ClearTalk is all analog Motorola Type II on 800 MHz. frequencies. Most are licensed to local electric coops.

The Bloomington-Normal-McLean County area's EF Johnson Multi-Net system is being reworked but its reputation is so tarnished in the area that it will likely never be fully accepted.

> > If they use any illegal
> > equipment who are they harming?
>
> Not true, and you know that. This case is clear cut. There are still many businesses users on those channels, and there is nothing in the rules that says they have to leave either! So the idiots running the high power on the MURS license free channels are in fact interfering with the current legitimate users of those channels. The power is deliberately kept at the 2 watt level, or less in many cases, to limit any interference to other users on the same channel.
>
> For example there are two fast food outlets, and a "Laser Quest" Laser tag game hall, all within a couple of miles of my apartment. All use the same MURS channel frequency. None of them have a problem because the TX power is kept very low. You get more than a quarter mile away and you can't even hear them any more. Now if you get some idiot running 50 watts, by using a modified Ham 2m rig illegally on MURS, which could easily cover a 20 to 30 mile radius all round, the interference problem becomes huge.
>
> > Nobody.
>
> Talk about being out of touch with reality. I'll bet you didn't even think about the problem.
>

Amateur Radio Newsline™ Report 1295 - June 7 2002

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone.

Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. Free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

==========

Amateur Radio Newsline report number 1295 with a release date of Friday, June 7th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Kids Day is coming and a legend leaves Top Band. These stories are first on Amateur Radio Newsline report number 1295 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: KIDS DAY COMING JUNE 15TH

It’s possibly one of the two mot important ham radio days of the year, and its only a week away. We are talking about the second of two Kids Day operating events held every year. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has the story of the event and the man who made it happen:

--

The next Kids Day is June 15 from 1800 to 2400 UTC. Thats Saturday here in the United States. Most of the activity is on 20, 15 and 10 meters, but you can also put kids on the air on your local repeater if you wish.

Kids Day is not a contest. In fact, it is a non structured event where all you have to do is to call C-Q Kids Day, and then put the youngsters visiting you on

the air to talk with other kids visiting other hams. Once the children are talking,the suggested contact exchange might include the youngsters names, their ages, their location and -- for the younger ones -- favorite color. Best of all you can work the same station over and over again if the operator continues to change.

If this all sounds like a great way to spend a day, you might be interested in learning ewhere Kids Day came from. In reality is the story of vision by one man. A man who long before most relized a problem even existed.

It was Larry “Tree” Tyree, N6TR, who recognized that ham radio had no future without a steady influx of new, young hams. Kid hams filled with the wonderment of childhood. That thirst we are all born with to “learn.” To “experiment.” To find out how this or that “really works.”

But Tree Tyree did not just sit there and say let somebody do something. Working woith Oregon’s Boaring Amateur Radio Club, he went out and did it himself. And in creating Kids Day, N-6-T-R, probably established the most important “ham radio holiday” that we have.

“Kids Day.” Just think what it really means. It two days every year where we “grown-up” hams open our hearts, minds and stations to the young. We invite them in. We put them before a mic or key. We put them on the air to experience first hand the “magic” of radio. Then we silently pray they some of them will knock on the door again and say: “...can we talk on the radio again?” When that happens, we know that ham radio’s survival is insured for yet another generation.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

The first Kid's Day event was held on December 2, 1994 but it was, N6TR, who took “Kids Day” from a dream to a twice yearly reality now sponsored by the A-R-R-L. And in doing so Larry “Tree” Tyree N6TR figuratively “paid the premium” on the life insurance policy that is Amateur Radio. (ARRL, ARNewsline™, W6AQ)

**

RESCUE RADIO: NEW MEXICO WILDFIRE EMERGENCY FOLLOW-UP

More this week on the role that Amateur Radio operators in New Mexico played as a wildfires raged in that state. As reported last week, hams were called out as soon as the fire emergency was declared. Now, the ARRL Letter provides some in depth follow-up.

The Letter says that on May 23rd, an incident command post was set up in the town of Espanola in response to a so-called "sleeper fire.” This is a lightning-caused fire that smolders before bursting into flame.

This one erupted near the village of Truchas in north-central New Mexico. Over the Memorial Day weekend, more than 250 residents were evacuated from their homes in Truchas and the nearby village of Cordoba.

Rio Arriba County Emergency Communications Manager Lonie Scott, AH2AZ, activated amateur communications support. Amateurs were dispatched to Red Cross shelters set up at two elementary schools in Chimayo, and The Los Alamos Amateur Radio Club's W5PDO system provided support.

By late on May 24, the wind had shifted. The fire was burning away from Truchas. Residents were able to return home starting at 9 AM the next day. New Mexico Section Emergency Coordinator Bill Kauffman, W5YEJ said the incident command post and the shelters closed later that day after all evacuees had returned home.

As of May 29th the fire was still burning in the Pecos Wilderness area of the Santa Fe National Forest, but was not considered a threat to any homes or structures. But as tinder-dry conditions persist across the South-West, amateurs remain on alert in case more wildfires break out. (ARRL)

**

ENFORCEMENT: PIRATE BROADCASTER BUSTED IN PUERTO RICO

Turning to the regulatory arena, the Federal Communications Commission has announced that an investigation by the it’s Enforcement Bureau has led to the seizure of unlicensed broadcast radio equipment allegedly operated by Amil Lugo-González.

The station had been operating on 99.5 MHz from Jayuya, Puerto Rico. The FCC San Juan Office, working in conjunction with the United States Marshals Service and the Office of the United States Attorney for the District of Puerto Rico, seized the equipment on May 21st. The FCC says that on more than one occasion it had issued notices to Lugo-González directing him to cease operation of the unlicensed station. (FCC)

**

ENFORCEMENT: SHORT TERM RENEWALS GRANTED

Meanwhile, two radio amateurs have been given short term renewals of their Amateur Radio licenses. The FCC’s Riley Hollingsworth tells us who they are and the reason each is getting a shortened license term:

--
Hollingsworth: : “A short term of an upgrade to Extra class was given by the Wireless Bureau to Sam Jacobs, K3SAM. The grant was short term due to previous problems involving the filing of a club call sign application.

And, a short term renewal was given to Peter Figuroa, N6IWH, of Berkeley California. Figuroa had been on the Amateur Bands after theexpiration of his license but there were some extenuating circumstances.”

--

In both instances, two year license renewals were granted. If there are no other enforcement issues with either Jacobs or Figuroa over the next two years, each can apply for a full 10 year license renewal in 2004. (FCC, RAIN)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the AF4CY repeater serving Madison Virginia.

(5 sec pause here)

**

CHANGING OF THE GUARD: THE 160 METER GATEWAY NET GOES QRT

A longtime fixture on Top Band has gone silent. This as Vern Jackson, WA0RCR, announces that he has terminated operation of his famed 160 meter Gateway Net. Here is the announcement as Jackson himself made it:

--
AUDIO ONLY REPORT: HEAR IT AT WWW.ARNEWSLINE.ORG
--

Over the almost quarter of a century that it existed, Jackson's net presented some of the top news and information sources in ham radio. This includes Hap Holly's Radio Amateur Information Network and Amateur Radio Newsline, all in high fidelity A-M. (WA0RCR)

**

THE VEC SYSTEM: NEW TECHNICIAN SYLLABUS RELEASED

The Question Pool Committee of the National Conference of Volunteer Examination Coordinators has released the revised Technician Class Element 2 Syllabus into the public domain. This syllabus will be used to develop the new question pool for Technician Examinations going into service on July 1st, 2003. All amateurs are encouraged to submit candidate questions to the Question Pool Committee by this coming September 15th.

Now before you sit down to dream up new questions there are some strict guidelines that must be followed. All proposed questions must be no more than 210 characters in length. This includes all spaces and punctuation. All answers and distracters no more than 140 characters including spaces and punctuation and you must identify both the syllabus area and the correct answer. Also, if the question is rule based, identify the exact reference in the Part 97 Amateur Service rules.

Candidate questions should be sent via e-mail to QPC@arrl.org. The complete syllabus will be posted to the ARRL website within the next few days. (W4WW, NCVEC)

**

REGULATORY: JOINT U.S.- MEXICO COMMISSION MEETING CONCLUDED

Call it radio regulation on an international level. This with an announcement that the FCC's Enforcement Bureau recently took part in the 26th formal meeting of a regulatory body known as the Joint United States and Mexican Commission.

The Joint Commission, formerly known as the Mixed Commission is made up of representatives from the United States and Mexico.
The latest meeting took place in Mexico City during the week of April 22nd. During the gathering the group reviewed 115 cases of harmful radio interference in the United States and Mexican border zone. Of these, 47 were officially closed. A report is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-02-1063A1.doc (CGC Communicator)

**

REGULATORY NEWS: FDA WEB AGE ON RADIO FREQUENCY HAZARD FROM CELL PHONES

The Food and Drug Administration and the Federal Communications Commission have established a joint web page called "Cell Phone Facts." This, in an effort to provide reasoned answers to the public's never ending health and safety questions concerning the radio frequency power produced by portable cellular and PCS phones, and their base stations. The site is in cyberspace at www.fda.gov/cellphones (FDA, FCC)

**

CONFERENCES: ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE

Technical papers are solicited for presentation at the 21st Annual ARRL and TAPR Digital Communications Conference. The event will be held September 13th to the 15th in Denver, Colorado.

The annual conference proceedings are published by the ARRL. Presentation at the conference is not required for publication. Submission of papers is due by August 5th. Conference registration details and updates, along with more information are in cyberspace available at www.tapr.org/dcc (TAPR, ARRL, ANS)

**

HONORS: CQ MAGAZINE ADDS TO HALLS OF FAME

Forty-four new members have been added to the CQ Amateur Radio Hall of Fame, while the CQ Contest Hall of Fame and the CQ DX Hall of Fame each grew by one member. This, with OZ1LO being honored by his fellow contesters and W0AR being recognized for his accomplishments in DX’ing. The announcements were made at the recent Dayton Hamvention. A complete list of winners is in cyberspace at www.cq-amateur-radio.com in the “announcements” area. (CQ)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EMERGING TECHNOLOGY: THE NEW E-MAC

Apple Computer has unveiled a new line of computers exclusively for educators and students. Apple says the new e-Mac will feature 17-inch monitors and high speed G4 processors. The e Mac is slightly smaller than the iMac and includes stereo speakers and a CD-recordable drive. The price for the new e-Mac machines will begin at 999 dollars. (Appple press release)

**

HAM RADIO IN SPACE: BOY BAND MEMBER MAY NOT MAKE IT TO SPACE

Possible problems for a boy-band member who wants to fly in space. The latest news reports quote the Russian Space Agency as saying it has no contract in hand to carry 'N Sync's Lance Bass to the International Space Station.

As previously reported here on Amateur Radio Newsline, Bass has made public his wish to visit the I-S-S. He has already made a trip to Russia to undergo medical tests in preparation for a seat on an upcoming flight.

As of airtime, its not known if Bass has been approached regarding his getting an Amateur Radio license and taking to the ham radio airwaves if he does get to make the trip. (Published reports)

**

INTERNATIONAL – CANADA: NEW RAC CANADA DAY CONTEST MANAGER

Radio Amateurs of Canada Contest Manager Joe Mac Pherson, VE1CH, has announced that the Moncton Seniors Amateur Radio Club has taken over responsibility for the management of the R-A-C Canada Day contest. This, effective immediately. Mac Pherson says that all inquiries or electronic logs related to the R-A-C Canada Day Contest should be directed to ve9qed@rac.ca. Non-electronic logs, for the RAC Canada Day contest should be mailed to the Moncton Seniors Amateur Radio Club at Post Office Box 73, Moncton, New Brunswick, Canada. The postal code is E1C 8R9.

**

INTERNATIONAL - GIBRALTER: RESTRUCTURING AND A NRE LICENSE CLASS

License restructuring is coming to Gibralter. Peter Naish, VK2BPN in Australia has been advised by Wilfred Guerrero that Gibraltar will be introducing the New Foundation Licence by mid-June. Guerrero, who is the Secretary of Gibralter Amateur Radio Society says that the new llicense will be similar to the highly successful Foundation License recently put in place in the United Kingdom. The prefix to be used will be ZB3. (Q-News)

**

DX

The 6 meter D-X season seems to be here. Jay Kesterson, K0GU in Colorado reports over the VHF Reflector on some very early season E skip openings to Europe. Jay notes that on June 4th at 15:14 UTC he heard the EN19 beacon. He then checked for European video signals and was surprised to hear many of them on and near 49.750 MHz. Jay says that some were S 9 plus 20 d-b. He then worked SM3UZS at 15:50 U-T-C followed by OH7PI at 16:45. (VHF Reflector)

Still with 6 meter D-X news, word that St. Paul Island should be on the air late June 29th through July 9th. According to Herb Spoonts, W3IWU, the operation will feature a full time, dedicated six meter station operated by W7XU, N0QJM, W0SD and W0OE. Herb says that the six meter station will only transmit on 50.157 MHz listening up 5 kHz and more when needed. Liaison will be on 28.885 MHz and updates will be provided to the appropriate Six Meter Internet sites and reflectors. St. Paul Island holds the prefix CY and is located in Grid Square will be FN97. QSL via W7XU. (Via E-Mail)

On the High Frequency bands, GB2RS reports that JH0IEW/JD1 and JE0EHE/JD1 will be active from Ogasawara Island through the 16th of June. They will be operating on 80 through six meters, including the WARC bands on SSB and CW. QSL to home calls or via the bureau. (GB2RS)

Also, keep an ear open for W5AA slash TI8 from Costa Rica until the 17th of June. He will operate on all bands with an emphasis on 30, 12 and 17 meters. QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: ATOMIC COFFEE MAKER

And finally this week, if you are a ham who has trouble waking up to keep those wee hours D-X schedules, the answer may be as close as the local appliance store. How about an atomic time coffee maker?

No, we aren’t kidding. We discovered this one last week in an appliance store in the Ft. Lauderdale Florida area. It’s called the Perfect Time Coffeemaker, and according to its manufacturer Melitta Salton Inc, it’s the first such device using radio frequency reception of atomic clock signals to keep it in sync with the National Bureau of Standards time keeping system.

Melitta Salton claims that the internal clock provides accurate time right out of the box by monitoring the WWVB broadcasts from Boulder Colorado. All the user need do is to select his or her time zone and the coffeemaker does the rest. It even automatically adjusts to Daylight Savings Time and its internal back-up batteries keep it going during short duration power losses. Salton also says that it also brews good coffee. And what more could any D-X hound ever ask for. (ARNewsline/4)

It's not the right thing if you want long range communication
regardless of power. 11 meters will do better.

Hello!

Well; i dove in and got an old Radio Shack PRO-2035 Base Scanner.

Q: I bought a Radio Shack "Center Loaded" antenna; which seems to be doing quite a nice job, but are there any others out there?

I move the scanner around the house, so I'm really not ready for a roof-mounted antenna yet. Id like to keep the scanner and antenna indoors. :)

Also: Any 'must have' frequencies for this scanner. Im located in Monmouth County [and near Ocean County] New Jersey.
THANX!
Mike

Martin,

What you are experiencing will happen with a handheld because of all kinds of reflections from your surroundings. The antenna on a hand held is about the worst kind of antenna for several different reasons and the only real cure is to use an external antenna mounted free of obstructions. Other than that those of us who appreciate the mobility of a handheld scanner just have to learn to live with the trade offs.

Good Luck
Rod

Who died and left you in charge? Are you an amateur operator,
if so, leave us alone please.

MURS will open opportunities for everyone:

1) Scanner operators: They will listen as usual; it's what they do...

2) HAMS: they will modify their radios and use MURS, too - to
speak with non licensed friends and associates.

3) Truckers and CBer's: An opportunity for better communications
without interference from skip and trashy people.

4) I will set up a 3 db gain antenna on my building (on a hill)
and talk with everyone in my town. I can hardly wait!

Guanajuato why not mind your own business?

I have used a variety of odd items around the house.. the best results I had was from stringing an odd length of thin copper wire across the room. I was limited from putting an outside antenna, so I had to figure something else out.
I took a 6 ft piece of 8 conductor phone line, stripped the wires out, and soldered 2 6ft lengths together and strung them out.
Then soldered one side to a motorola-type jack.
I heard FDNY on My first scanner (an old BC 140) which was over 100 miles away, and the house wasn't even on much of an elevation.
So, if people pick on you for using a coat hanger, tell them what I tell people.. "hey.. whatever works"

Hi Martin,

Unfortunately a handheld radio with the antenna mounted to it will
experience
these problems because of reflections from nearby objects especially
those made
of metal. This is one of the tradeoffs those of us who want the
mobility of a
handheld have to suffer with.

The only other solution is to use an antenna that is mounted free of
obstructions and connected to your scanner with coaxial cable. You may
be able
to do this from you balcony buy mounting an antenna on some type of
bracket
arrangement at least 18" or farther from you balcony. Try getting some
ideas
from books on antennas that are available at ham stores.

Good Luck
Rod

The FCC may not enforce it, but I'd imagine the possibility exsists to
have a few questions asked upon truck inspection.

There are a couple of new frequencies that I stored on my scanner (cause they sound interesting). But how do I find out where these transmissions are coming from. Like where is the location. I listen to the frequencies all day and nobody states their location. BTW its a police frequency. All they do is state street names. That still doesn't give me a clue to if they are in my city or the city next to me... I just don't know. Could anybody help me?

Consider using Tcl/Tk for multiplatform, graphical radio control
and cloning software. Tcl/Tk a high level scripting language so
your programs are much shorter than Java, C, or C++ programs.

Tcl/Tk is free and open source. It's mature.

I first used Tcl/Tk about 6 years ago
at work in Bell Labs/Lucent and found
it is the best language for my radio control applications.

For example, configuring the serial port takes only
one instruction, namely fconfigure (with appropriate
arguments). Works on Linux, Windows, MacOS X, BSD, openBSD,
Solaris, etc. There are several graphical widgets provided with Tk.

You can learn more about Tcl/Tk at http://www.tcltk.com and
http://mini.net/tcl/0.html.

You can read Tcl/Tk source code by downloading any
of my "tk" radio programs from http://www.parnass.org

I bought a few Tcl/Tk books. It's
best to have at least 2 books, one from which to
learn Tcl/Tk and a pure reference book.

Tcl/Tk Programmer's Reference
by Christopher Nelson, published by Osborne, is the best reference book.
(McGraw-Hill Professional Publishing; ISBN: 0072120045)

Welch's Practical Programming in Tcl and Tk is probably
regarded as the definitive book, but I found the material
presented in a way which makes Tcl/Tk more difficult to learn.
It's a very thick book and better used as a reference text.
(Prentice Hall PTR; ISBN: 0130220280; 3rd edition)

The easiest book to learn Tcl/Tk is Johnson's Graphical
Applications with Tcl & Tk, published by M&T Books.
However, I don't think there is a recent edition.
I liked it anyway.

In the USA, you can buy Tcl/Tk books at Borders Books
and other large stores or from amazon.com over the web.

Here's a list of other Tcl/Tk books:

http://www.geometry.net/basic_t_bk/tcl_tk_programming.html

Good luck.

I've decided to be rational for once and rethink my stance on MURS. It really is a great band and a lot of fun for the ones who don't care about passing a test or trying to impress people with neat call signs and lots of little uhf antennas on there vans or lots of ht's on there belt. At first I was a bit bothered by the fact that most of the people on the band seemed much "cooler" than myself and nobody really wanted to talk to me even after I told them I was a ham and running a yaesu radio! From now on I will just ignore this band full of the same type people that used to beat me up in school and I'll continue to talk to my friends on rec.radio.cb via the Internet and kerchunking the machines on 2 meters.

It may interest most folks to know that the RIAA and its associated sister organizations (such as the MPAA) can be hurt by a short term boycott. Reason I say this, there are only a total of 5 or 6 organizations that are members and as such, are all equally vulnerable should such action take place.

Also, if the government were to treat these entities as a "cartel", then it would be loads easier to prosecute them for "monopolistic market behavior".

as it stands, the cost of certains types of media (cd/dvd's, etc) are kept artificially high because they wish to protect 9and enhace) their revenue stream. The only reason these organizations now exists is to protect their revenue stream and assert control of the market to their own ends (this often includes attempting to quash new technologies or foster technologies designed to remove "fair use rights" from the consumer).

Hi All,

I'm soon to be getting a Alinco DJ-X3T Wide Band Reciever, 0.1 to
1300 Mhz, Multiple Scan Modes, WFM, WFM/STEREO,NFM,AM...Bug Detector Finds
Hidden Transmitters, High Quality Audio.

I purchased this Wide Band Reciever From LENTINI COMMUNICATIONS, INC For
$209.95.. But since it's comming from Newington CT, I paid $ 230.00 U.S. for
it.......I can't wait for it to get to me here in Toronto,Ontario (Wonder's
how this receiver will work here?). I found this Reciever in Popular
Commnications.

Thanks All

That would only happen if us mindlessly-hungry-for-entertainment
Americans united and decided to ignore tham. Not likely enough to be
a serious threat to their cartel.

>Also, if the government were to treat these entities as a "cartel", then
>it would be loads easier to prosecute them for "monopolistic market

Given the amount of campaign contributions ("bribery" for short) these
outfits throw at elected officials, the chances of that are even more
remote. Never happen.

You'll have a lot of fun with it.

I'm using an 8' VHF marine antenna about 25 feet in the air (not on a
hill) and can talk all over my city (base to mobile) and into many
surrounding cities. I'm using a few Radio Shack VHF mobiles set to 2
watts.

MURS (Multi-Use Radio Service) is a no-license VHF personal radio service which operates on 151.820, 151.880, 151.940, 154.570, and 154.600 MHz. The FCC MURS rules permit voice and data communication; as well as external gain antennas. There are no restrictions on business activities with MURS, and the 2W transmitter power limit works as a major benefit in reducing interference, and allowing more users per channel. External power amplifiers on MURS are of little or no benefit, so most of the problems present on the 11m CB radio "zoo" do not exist on MURS. Most any low-power VHF Part 90 business radio can be used on at least some of the MURS frequencies. Additionally, the new rules no longer specify an ERP (Effective Radiated Power) restriction - so it is now possible to build quite efficient mobile and base stations, using external gain antennas.

I am looking for a SPG file for the Golden Triangle area around Beaumont, Port Arthur, Orange Tx and Surrounding areas.

Anyone that has a file like that, please let me know.

Or, If you have a Pro92 or the Pro2035 and you are in the area, I have the software and cable and would like to get a clone of your setup.

Thanks

Bob Parnass likes tcl/Tk but I prefer perl/Tk. perl is not as wordy as tcl, looks more like C and it also runs on all the major platforms. perl can get a bit obtuse and difficult to read if you get really succinct, but it's easy to learn and rapid in development. There are many perl tutorial books but I like the O'reilly books.

Both languages are good choices, though.

Good luck.

I like Perl, too, and would have rather written
in Perl than Tcl.

However, the Tk portion which is available as an
add-on module to Perl is complicated for non-techie users to install
and it is not as frequently updated as the Tk furnished
as a standard part of Tcl/Tk.

Both Tcl/Tk and Perl/Tk get to the "same place,"
but take different roads.

Although the 895 is a good scanner, the 780XLT is by far a better,
more advanced scanner. They aren't in the same class.
The 895 is about $189.
The 780 is around $350.

>Or is there something still even better?

The 780XLT is the best Trunking Scanner available right now.

But if you want to track only one system then the 895 may be the
better buy. 895 is a good radio but has limitations due to its age.
>

>The 780XLT is the best Trunking Scanner available right now.

I don't think so. The Pro 93, 245, and 895 trunk as well if not better
than the 780. I think the 780 is nice but many may not need it and the
base version of the Pro93 is fine, cheaper, and suited for a lot of
people on or off a budget.

The 780 has more channels, multi-trunks, and has an alpha display.
It's about as good as it gets for a consumer level product.

First, determine what your curent dB loss is on your freqs of interest- it may very well be that going to say, LMR400 will only net you a dB or 2- not worth the effort or cost.

If you just want to clone a 93 to a 2053, all you need is a 1/8 inch
mono-mono patch cable. Just a few dollars at RS.

If you mean a computer interface cable, yes - cables and software are
available. Go to www.pro-92.com (include the hyphen in the url - it
matters) and look for the software and PC Interface pages. Yes, it's
a PRO-92 site, but the 93 is closely related and that's covered too.
This site has the most comprehensive (and coherent) info available on
the 93's computer interface.

The hot setup is to get Win93 and the two-way cable made by Purple
Computing.

I agree with Dale's comments. However, here're 2 URLs of vendors that offer high quality coax. The DavisRF site has tables of attenuation vs frequency so you can determine what's best for you.

>be done with it?

Don't know the status of the new cable. You can e-mail Larry to check
on that. Having the right size connector built in is definitely a
Good Thing - you should wait until that's available.

Win93 will let you program everything you'd ever want to on the
93/2053. Especially frequencies and text tags.

Personally, I'd never get a scanner that did not have a computer
interface. Life is too short, the buttons are too small, and my
fingers are too fat.

You might think about mounting an external scanner antenna on top of a TV mast just outside the room where the scanner is located. When it comes to VHF/UHF, height matters. The higher you can get the antenna, the better. Any external antenna will work far better than one mounted on the back of the scanner, provided you use good feed line. You'll notice that you'll be able to pick up far more with an antenna mounted up only about 20 feet or so than one plugged into the back of the scanner. However, if all you want to listen to is the local PD/FD, then the telescopic whip should work fine.

Get a copy of Police Call from Radio Shack & look up the frequency. It
should have the user listed. If you can copy the CW callsign ID, you can
look it up by callsign. You can even check the FCC website for
frequency/callsign info.

Oh, heck yeah! I've seen the 2006 scanners go upwards of $350 used. I would not pay that much for a used one (I would be an ebay sucker!), but that's just me, though. Yeah, there may be "suckers" on ebay that buy them for that much, but it happens. It's certainly one of the best scanners of it's time, though, at least when it comes to scanners with 800MHZ in them. If one can find them, the BC800XLT, and the MR-8100 (ahead of it's time back then) are fine choices in scanners. Not as feature packed as the PRO-2006, but they hold their own regardless. Congratulations on your cheap scanner find.

Cheers!

Were I not moving from Alaska, I would have put mine online. Unfortunately, what I hear isn't all that interesting nor is it very frequent since I live on Eielson AFB about 10 miles from North Pole and 21 miles from Fairbanks.

Let's just say that even if I *did* put mine online (were I not moving, that is), no-one would really have anything much to listen to other than the gibberings of the military frequencies and the occassional North Pole Policeman or Alaska State Trooper. Nothing like what is available in the Lower-48.

> Or is there something still even better?

You sound like you're relatively new to this (like me).

If so, why not just buy something that is suitable for the area where you live. Almost anything. You will be buying another scanner next year -- or next month -- anyway, so why try to start out with the perfect scanner?

Something priced in between the two you mentioned would be the Radio Shack Pro-2053 (Pro-94 in hand-held). They go for $179 when they're on sale (which is often). I wouldn't say that they're as good as the BC780, but they are almost as good. The technology is very current. Alpha-tagging, EDACS, computer interface (for memory management purposes), etc. I think they are the "best buy" that's out there at the moment.

Also, the 780 is due for an update later on this year. Buying one now might result in spending even more money in September.

You would *not* go wrong by buying a 895, new or used. It isn't current, but it does do trunking, and it is one of the best scanners ever built. When you get your next scanner, you will still find a use for the 895.

Good luck!

Harry

Message-ID: <kj1N8.93636$%J4.2191441@twister.tampabay.rr.com>
Source record: 47248

If I wish to get a winradio 1550e unblocked, is it the software that determines it or do I have to purchase a different box?

Is it illegal for me to purchase an unblocked unit from Europe or elsewhere?

Within the next 5 years I can see the analog cell system going away in the states, and that spectrum used by other services. It sure would be nice to be able to monitor them.

Also, anyone know the speed of the winradio 1550e in terms of channels per second or how it would compare to a 5 year old rs home scanner? My computer will be a 1ghz pentium III.

thanks!

Sean

>states, and that spectrum used by other services. It sure would be nice to
>be able to monitor them.

Dream on. That spectrum is worth big bucks. The cell phone companies
will find something to justify their hanging on to it and existing
regulations against monitoring it will be used to help further this
justification.

>Also, anyone know the speed of the winradio 1550e in terms of channels per

I don't know the Winradio gear that well, but I have to point out that
the speed of the scanner probably has more to do with how fast the
squelch circuit will respond to a signal than how fast the computer or
synthesizer is.

Man, you are so out of touch with reality it is painful!

When you are trying to hold a conversation with a friend or family on
a MURS channel and "THE BANDIT" keys down his 50-watt modified amateur
radio and says "FOOT...FOOT...FOOT", THEN tell us how ineffective
extra power is on MURS!

Hello!

Im lookign for a Desktop [indoor] Discone Antenna for my RS PRO-2035, but on the web, Im only finding UK sellers.

Anyone in the USA selling these Antennas?

THANX!
Mike

What are you using for an antenna? Don't expect to hear much without a
good outdoor antenna. MAke sure the 10 dB attenuator is not switched in.

According to what I have read they are supposed to be pretty good. I picked one up a couple of months ago on a Radio Shack close out table for $6.00 but have not had the time to put up yet.
You might check your local RS, never know, you might get lucky and find one.
The ought to be worth six bucks for scrap metal.

Depends on where you are!

I could be inundated (if I so chose to be) with good "traffic" just using the rubber duck. With a high, outdoor antenna, I could be doubly inundated.

As it stands now, with the rubber duck, I need to use the CTCSS feature on many of the channels to keep the interference down. An outside antenna would just make for worse problems, plus the additional problem of strong stations overloading things.

No thanks,

On the other hand, there are some things (Marine band, for one) that I don't receive well, and a high, outdoor antenna would help here.

Walt

Well it can do more than 100 watts too

POWER MOD For Icom 746
****
Remove bottom cover.

Find the voice module plug-in.Right behind it you will see 4 pots

R993 144 mhz power adj
R991 50 mhz power adj
R989 HF bands power adj
R990 AM power adj

You can tweak these to up the power suggest on hf doing it on 40 meters. you
can get close to180 watts on 40-75 meters about 125 to 150 on 20-10.

The pots are very small be careful not to use something to big. the are all
metal pots.

Not a problem, the two MURS stations running 2W, simply point their
12dB gain antennas at each other, and we simply ignore the fool.

If someone goes with an external power amplifier, we'll have to go
with higher gain beams.

"Problem solved"

It is entirely possible to find a PRO-2006 at a garage sale for $5. The average person has no idea what it's worth. Only that it's "old", not being used anymore, and taking up space.

I found an "old CB" at an estate auction once. It was actually a Kenwood dual-band ham rig, worth about $300. Opening bid was $20 and nobody bid against me!

Just curious, have you noticed it being directional? Someone mentioned that they put theirs on a small rotor and it seemed to help. Just looking at it you would think that it might be slightly directional.

I've been using my Rad Shack version for about
two months now and I recommend it.

It is a very hot antenna on VHF and UHF, but performs
rather poor on 800 MHz.

The DB32 from Optoelectronics may fit your need. It is a little
expensive for what it is but if that does not matter check out:

http://www.optoelectronics.com/accessories.htm

Scroll down to the the DB32

I have one and it is a cool mini antenna. It is also top quality.

Good luck.

And then one has to wonder why, if the rig is capable of 180 watts, why
Icom didn't ship it that way?

Could it be that running it at 180 watts can:

Severely shorten the life of the transmit finals?
Result in increased spurious emissions or IMD products?
Create more heat than the heatsink can handle, exposing the rest of the
rig to high temperatures and possible failures?
Exceeding the current draw ratings which could cause PC traces to burn?
Exceeding the RF power rating for the relays, PIN diodes and other band
matching components?

Just because it can doesn't mean it should.

I always laugh at screwdriver technicians circumventing good engineering
practice......

No. Basically, the Scantenna is a dipole, tuned for various frequencies. It's
only directional if you mount it horizontally.

SHINWA SR001 RADIO SCANNER FULL (nothing blocked) 25MHZ to 999.995MHZ range; NOT modified!; Remote control, 200 Channel memory.

Detailed Description
This is the SHINWA sr001 radio scanner. This features FULL (nothing blocked) 25MHZ to 999.995MHZ range; Remote control; Original owners manual; 200 channel memory (10 Groups of 20 channels); 2 Antenna connections: BNC and "N"; AM, FM-Wide and FM-Narrow operations. 3 resume scan modes: Carrier, Audio and Timer (programmable up to 19-second delay!); front headphone jack. The chassis is the size of a standard car stereo and uses a 12 Volt power supply.

This radio has been great! It looks VERY sharp and has an unbelievable frequency range! Selling because I don't use it any more as I recently purchased a handheld HAM radio which can do everything I need.

I have NEVER installed this radio in a vehicle. It has sat on my desk hooked up to a 12v power supply or been in the closet. I'm sure the internal battery condition is good (no meter or other means to test). The display is beautiful and has a multicolor signal meter!

Any questions please contact me!

Check out this auction!!

http://www.ubid.com/Actn/Opn/getpage.asp?AuctionID=527929689

4179. Portable antenna for scanner

Newsgroup: rec.radio.scanner
Date: 2002-06-11 13:43:53 UTC
From: post_to_usenet@hotmail.com
Message-ID: <b6b4e772.0206110543.4b34429c@posting.google.com>
Source record: 47293
Cross-posted to: rec.radio.amateur.antenna,rec.radio.scanner

Hi all,

This Saturday I bought an IC-R2 scanner (continuous .495 MHz ~ 1.3 GHz). I have no other scanners to compare to, but it has surprised me quite favorably. I thought it would only work acceptably well on VHF and would be just a toy on HF and UHF, but the question is that it works well (for me) on all bands. After changing the supplied antenna to a slightly longer Diamond (SRH-536) made for 144/430/900 it even receives many stations on HF and the strongest stations on AM BC. With a dipole cut for 15m placed at the side of a building (balcony) it gets foreign AM BC and many more on HF.

Well, that said, the question is: What portable antenna to use for it? I googled for it both in this group and on the web and found nothing specially good.

For portable use, I think for HF up to maybe 600 MHz I could use a home made dipole with two foldable telescopic whips (like TV "rabbit ears") ranging 10 to 50 or 60 cm (4 to 20 or 24 inches) with a short bit of coax to the SMA. That would allow me to "tune" the dipole to the approximate band I am scanning. For 600 to 1.3 I do not know what to use. Maybe two different size dipoles soldered straight to two SMA connectors (one for 700~1000 MHz and one for 1~1.3 GHz), forming a T with the receiver. If not, I had thought of a small discone made of copper sheet (not wires), but it might be quite bulky to carry in a small bag, so I think maybe the two dipoles would offer a not much worse gain (loss?) on that frequency span.

Opinions? Recommendations? Please advice.

Thanks for responses and comments.

Toni

What a jerk he ask a stupid question and gets an answer then acts like an ass he does this all the time what a low life!

I could buy that AND a case, fer crissakes! ...but I don't see the need for a case when the durned thing (Pro-93) has a nice belt clip. What am I missing? Protection from scratches?

I've seen similar duckies ...I don't suppose in my circumstances that I'd have to worry that they're specifically tuned for freqs used in auto racing, riiiiiight?

The forty-buck one is supposedly good for 100hz to 1GHz.

The only difference is price, Mil-air, I-call and some bells and
whistles. The 780 is rather weak in 800 sensitivty and you have to pay
another $50 for an external speaker because the audio sucks. And the
780 is rather slow because it stays on the control channel for one
second which is way too long. The 780 is nice but overated.

It depends on WHERE the bandit is. Fifty watts might interfere, and they
might not.
If there is a big hill between you, you might not even hear him. VHF is
line of sight,
and tends to get blocked by lots of things. In a car, you can be sitting in
one spot and
not hear one single thing. Move 3" and the signal comes in full quieting.

Jerry

Typical thinking: TURN THEM THAR KNOB THINGIES ALL THE WAY RA'HT,
BOYS!!!! Those 80 watts won't even be heard or registered on a receiver's
S-meter.
All you are doing is putting strain on the finals. If they had been meant
to run 150-180
watts, then the mfr would've MADE it that way. Pity that people have never
heard of
"headroom". (sigh)

Yes, I think all parties involved are severely leaning towards dumping
the Multi-Net system and possibly selling it to another agency.
Today, I've heard the Normal PD conducting reception tests on the
Cleartalk system. So, they are evaluating other options at this
point. I'm all for them dumping Multi-Net since there isn't a scanner
built today that can truck track it. Imagine my dismay when I found
THAT out. :-P

Martin County FL also has an EFJ multi-net system currently in service with
coverage problems. They're in the process
of scrapping it and going to a Motorola
(format unknown at this time).

For all who think i'm lying about getting the pro2006 for 5$bucks,
your just pissed that you laid out $$$ and I didn't, I got it at a
yard sale, obviously some old man bought the thing new and when he
died(or somthing like that) it got stuck on a shelf where a few years
later somebody found it not knowing what it was worth or maybe even
what it was stuck a 5$ price tag on it.

I have already modded it to speed-up and unhandicap it, I would like
to try the S-meter hack, but most of the other mods I don't yet
understand, before last saturday I had almost no knowledge of RF
scanning so take it easy on me.
I would be intrested in attaching the thing to a PC or a palm os
handheld(If anybody has even thought about palm/scanner interfaces),
but other than that what mods are intresting for the 2006?

I still am just using the colapsable stick ant. (0db, I know a little
about RF my grandfather was a HAM-op)I am looking at an outdoor I live
on the third floor of an urban apartment building in the northeast
U.S. So that should improve recption alot.

I am also looking for "police call" in any electronic format for
conversion to palm os format.
I have alot to learn so any informational links anybody has would help
me out.

So - let me get this straight - you are saying that folks in and around Disneyland would operate converted high-power radios on an unlicensed service like MURS.... or FRS???? Funny, I haven't heard of ANYONE (especially YOU!)complaining about FRS users being jammed at Disneyland.

Your true colors are showing, Randy... you just seem to dislike MURS for some reason... what could it be??? Uuummmmm, I don't know... maybe SATAN!!! oops that's the CHURCH LADY.... no it couldn't be SATAN... Ummmmm - I don't know... maybe DATA!!!!

Yes, Randy Hefner - DATA BIGOT EXTRAORDINAIRE.

I don't think you're going to find any difference between your discone
and the Scantenna. If you already have a discone up I would then
consider a mean such as the Antennawarehouse Scanner Beam. I have one
at 30' (no pre-amp) and pickup Air Traffic (both UHF & VHF) 200+ miles away.

Sounds like you are got a good Scanner Beam there I think that's the same antenna that Grove sells? Have you heard of anyone using any of the KMA Beams? They make two or three that I know of for Scanners freq. But when they are mounted vertical they should be mounted on a fiberglass mast pipe I guess.

Toni,
Almost any antenna will work, the longer it is the
better it is at lower frequencies. More important than
length is height, especially for the higher bands.
There is no 'one' antenna that's the 'best' for all
bands. Something you might try if you're close to a
'Wally-Whirl'... How about three or four of those "Have
a Nice Day" helium balloons, and a spool of #22 wire? Any
more than about 200 feet means you'd have to file a flight
plan with the FAA (I wanna see that one!), but it ought'a
be 'killer' on 800 Mhz! (LOL)

My mistake, when I was a Paramedic student at Community Med Cntr in 1994 I believe we were dispatched by the County and our patches to the ER Doc was made from a mini radio room down the hall from the ER. Here in Middlesex they are dispatched on 155.220 and they have an OPS freq which I have programmed in the scanner but can't remember the freq. I guess either my memory of the dispatch system down there is fuzzy or things gave changed.

Hi Doc,

Thanks for your answer.

> Almost any antenna will work, the longer it is the
> better it is at lower frequencies. More important than
> length is height, especially for the higher bands.

As you say, height is important, and I had overlooked it. I am now thinking of getting a camping tent(1) type collapsible fiberglass mast I can use to raise the antenna(s) some meters above ground. As for length, I cannot use a too long antenna, as these little things (scanners) tend to be easy to saturate. A short whip / small dipole is as good as it can get for HF reception.

> There is no 'one' antenna that's the 'best' for all
> bands. Something you might try if you're close to a
> 'Wally-Whirl'... How about three or four of those "Have
> a Nice Day" helium balloons, and a spool of #22 wire? Any
> more than about 200 feet means you'd have to file a flight
> plan with the FAA (I wanna see that one!), but it ought'a
> be 'killer' on 800 Mhz! (LOL)
> 'Doc

Yes, I know there's no 'one' antenna that's the 'best' for all bands (or this newsgroup would be over :-). This is way I was thinking of different antennas for different frequency bands that I could easily carry in a small bag.

As for the helium balloons solution, I do not doubt that gain-wise it would be a "killer solution" on 800 MHz, but I am afraid of it having a slightly too vertical pattern, and, besides, high pressure helium bottles for inflating the balloons are a bit heavy to carry in a bag ;-)

Anyway, as said before, thanks for the answer.

Toni

(1) Are them called "camping tents"? Composite words are hard to lookup in dictionaries!

4219. David Monroe in Canada

Newsgroup: rec.radio.scanner
Date: 2002-06-12 11:37:24 UTC
From: rugerp85 <rugerp85>
Message-ID: <ghcegu06ocb3jmgltkpsenfaqa9cjhvp0j@4ax.com>

Hi David Monroe in Canada,I have the most special of all 2006's awaiting to grace your mailbox.

Features:Case with no Plastic (totally redone with x-ray proof whimsidookle for shipping of highly explosive parts)

LCD Display has been modified for direct injection of Hydrochloric acid directly to your face.(Only activated if you tell a lie)

Power Modification has been all done,you can attach it directly to your balls for the most intense scanning you have ever seen.

Ah yes and the most of the most of mods.....The DELAY. Delay has been totally redone.I'm so excited ,the delay has been arranged so that when you sit for x amounts of minutes in front of this glorious rig,scanning,ripping people off,sending bogus newsgroup ripoff messages,it senses your tenseness and automatically redirects your computer to the nearest frapping site on the internet...

And for you David what does this all cost,for you I think it should be free,yes even with all these fantastic mods that have been included,you pay nothing....kinda goes along with what you are - don't ya think??

>
> Why does a car go 120 mph+ when the speed limit is only 55/65?
> Why don't car makers make the cars to only go a little over this speed?

Invalid analogy. A better one would be a car is rated to go 100 MPH all
day long. But it is capable of going 150 MPH. But at 150 MPH, you run
the risk of blowing tires, smoking the engine, or any number of outher
drivetrain failures.

>
> >
> > Could it be that running it at 180 watts can:
>
> > Severely shorten the life of the transmit finals?
>
> Doubtful

Doubtful? And what technical reference material can you cite to back up
that claim? The factory designs a circuit to have a adequate service
life, within the design limits of the devices. If you increase the
stress to any of those components, the first thing that happens is that
the MTBF goes out the window.

>
> > Result in increased spurious emissions or IMD products?
>
> Probable

Very probable. It only takes one reason to not turn up the power, so why
not this one?

>
> > Create more heat than the heatsink can handle, exposing the rest of the
> > rig to high temperatures and possible failures?
>
> Doubtful, and only slightly possible.

And I suppose you've got the thermal rise numbers to bear this out?

> > Exceeding the current draw ratings which could cause PC traces to burn?
>
> Doubtful

Maybe, maybe not. 180 watts is almost double what the factory setting of
100 watts is. That translates to an 80% increase in current. How much
extra current handling is built into the power circuits? I don't know,
neither do you. But it's certainly a possibility.

>
> > Exceeding the RF power rating for the relays, PIN diodes and other band
> > matching components?
>
> Doubtful

Really? You don't know Icom very well do you? I've already fixed radios
for guys (mostly 706's)that have popped out PIN diodes. Most of those
occur due to bad SWR reflected power problems. But it doesn't take a
huge stretch of the immagination to surmise that if the parts are so
close to their design limits, that they can be popped by simple SWR
problems, that upping the power by 80% MIGHT cause the same thing.

>
> > Just because it can doesn't mean it should.
>
> Just be cause it can doesnt mean it shouldn't

I tend to believe that the factory is the best judge of that.

> > I always laugh at screwdriver technicians circumventing good engineering
> > practice......
>
> Hmm that was right from a hams web site who performed the inital mods

Not all hams are all that bright, or morally consciencious. Many
nowadays don't even know a good electrical engineer, let alone act like
one.

I have it as well, and it's a very strong receiver. I think the directionality may be due to
its being mounted on a metal mast, which would act as a reflector, but if it's mounted on, say, a PVC mast, it should lose that directionality to some extent. Now that I think of it, I believe there may have been some mention of this in the paperwork that comes with it.

Hi Justice:

Well, of the few i've seen lately, its actually the LED that's gone bad!
Soooo, my best guess is that swapping it out will save the day.
Regrettably, i just gave the last of my supply of those to one
Dan Brinkman (a local techie); if you need me to have him contact you
with the correct style/color/shape'd LED, please advise.

Best regards,

Dave Lovell, W9DAG

>on a metal mast, which would act as a reflector

Yeah, I was wishing the other day that I had purchased 3 while the shack was closing them out. I'm thinking that you could mount them in a fashon like the old CB Super Scanner antenna and use some form of remote switching (think the super scanner used reed switches) to rotate them. You would always have two reflecting and one hot and be able to rotate them electronicaly.
There I go, thinking out loud again.

Using a GPS or a mapping program like DeLorme Street Atlas USA,
find the exact latitude and longitude of the tower.

Use those coordinates to search the FCC database for licensees
which have a transmitter site within a small distance of those
coordinates:

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/lat_long.hts

First, return it and get a Pro-93 at the local Rat Shack. Awesome units. Then e-mail me and I will personally assist you in programming (via e-mail) your new unit.

I bought the NiMH pack that PrimeCell makes for the 245 and have been using it now for about a year, works like a champ! Extend the charging time to 24 hrs, and you're good to go. I wouldn't say it's the best thing since beer in cans, as I prefer my beer in bottles, but it's a great improvement on the factory NiCad pack!

From: Jim Mac Donald <jmacdon@mitre.org>
Message-ID: <3D085F68.71EEFE6B@mitre.org>
Source record: 47179

Dave;
here are the MURS frequencies
151.625
151.700
154.570
154.600
151.820
151.880
151.920
I got the MURS out of a memory bank on a Radio Shack PRO - 90
This may not be all of them OR likely some extra ones.
Some may be "dot" frequencies or are itinerant allocations
hears a web site with more of the same
<http://www.fordyce.org/scanning/genfreq.html>
The site is an east coast outfit BUT they have information
that is nationwide in scope!
If you have a radio scanner with 200 to 500 or more memories,
filling up a bank or two with MURS, itinerant, "dot" or Family Service
Radio -
GRMS frequencies helps when coming across a unknown hand held.
Just bring up the bank of these low power business frequencies
or do a SEARCH in and around them and you'll find the users!
It's a great feeling of accomplishment to scan a bank or do a search
then find the unknown frequency and have the user coming over
the scanner radio receive. Lots of times you can see the person
as they are talking on the hand held, as your listening to them.
This is when a pair of walkman headphones or an earphone comes in
handy, discretion is always in order while working a radio scanner out
in a public places.
If your in a noisy environment headphones help with understanding
reception!
Even if a base station is the only comm gear available, having this mix
of
business frequencies in a memory banks can help out when unknown users
are in the neighborhood or around town.
A frequency counter can help find unknown frequencies. However
the counter has to be really close to a transceiver,
within ten (10) feet or one hundred (100) yards
with the more expensive units.

4267. WX Sat receivers and Ethernet QRN on 137.5?

Newsgroup: rec.radio.scanner
Date: 2002-06-13 13:31:18 UTC
From: Steve Uhrig <Steve@swssec.com>
Message-ID: <ui6hgucmtujov6j7vmior9ig3hr09kdolc@4ax.com>
Source record: 47182

Hi all,

Does anyone have any experience with Ethernet hubs generating loud signals on 137.5 megacycles, right on top of one of the WX sat frequencies?

I'm using a Hamtronics R139 weather satellite receiver and an inexpensive no name Pacific Rim 8 port 10/100 autosense hub. The hub has been working fine for a year or more, and I just finished building the Wefax receiver.

I'm hearing a loud strong dead carrier on 137.5 megacycles, the middle of the 5 sat channels. I traced it to the hub. When I kill power to the hub the signal drops completely.

Considering the receiver wants to scan all 5 weather sat channels, the strong signal locks up the scan. The receiver does not have the ability to lock out a channel, and that's not the ultimate solution.

The hub has 6 machines on it between two buildings, and the network works perfectly. But all those Cat 5 cables running around I can picture as being antennas, radiating that noise on 137.5 effectively all around.

The satellite receiver is located immediately next to a computer on the network, which is necessary because the satellite imaging software needs the network to print sat images on the color printer and laser printer both of which are in other parts of the building. It's not possible to kill power to the hub when there is a satellite pass, as the hub is needed for network operations which are going on more or less continuously, and I'm not going to look for specific sat passes, just let the receiver scan and suck up anything from any satellite it finds.

I can't replace the Cat 5 with Cat 5E, because most of it is buried in walls and was installed when the buildings were built or remodeled.

Has anyone else experienced this?

If anyone has a network with a hub or switch, could you tune a receiver or spectrum analyzer to the Wefax freqs and see if anything radiates from your hub/switch?

The freqs are:

137.3
137.4
137.5

137.62
137.85

I could simply replace the hub and hope the one I put in does not radiate anything on any of the above freqs, but I don't know if the interference is my particular brand or design of hub, or something to do with Ethernet and networks in general. Perhaps something at the 100 megabit network speed generates the 137 megacycle interference?

I'm looking for input from anyone who has the ability to receive at 137 plus has a network installed. My computer friends are not the types to have tunable receivers which will cover 137 megacycles.

The sat signals down there are wide, and the Hamtronics (and all Wefax) recievers are specially built to have wide I.F filters to accommodate the 38 kc deviation used for Wefax. So if you tune there, try both narrow and wide FM demodulators.

If no one else sees anything on the above freqs radiating from their hub or switch, I'll simply replace my hub with a newer switch and hope the problem will go away with that.

If the spur is associated with 100 megabit Ethernet, then I'm probably screwed at least on that one frequency.

Would appreciate any assistance from anyone who has the equipment to sniff their hubs.

Thanks ... Steve WA3SWS

Yes or no? Do you stand by your statement that extra power on MURS
will not help your communications?

>
> No... but, the fact remains - you are a data bigot.
>
> - Stewart

Now Stew. Why on earth would you label someone a bigot in relations
to a view on MURS radio? Resorting to this type of verbal abuse is a
sign of a weak mind. You assume I am against MURS. You could not be
farther from the truth! I intend to jump into MURS when the MURS
specific radios hit the market in sufficient numbers to cause price
competition. As for the "bigot" statement...It is REAL easy to use
such "slurs" when one HIDES behind a keyboard.

Stopped in today. Usual Situation.. Clueless.... Local store has a manager that proudly displays "3 Years of Service" Manager after only 3 years? Must have quite the turn around rate!

Anyway... Looking for some mica insulators for TO-220 transistors. "I have NO idea. If they aren't hanging up over there by the transistors, where you were looking, then we don't have them."

Another useless trip.

Does anybody have some TO-220 mica insulators they can sell me cheap? Where do you find these things without having to buy hundreds of them? Anybody have some laying around? I'll send you a stamped envelope, and whatever you want for them (within reason). All I need is two (2).

Thanks,
PH

In the Durham Radio catalog there is a portable scanner antenna, item number SCAN4, that is a 23" wire with suction cups on both ends and an 82" lead in cable with a BNC connector for the radio. Basically you could stick it across the inside back windshield of your car. Price is $12 Canadian... probably about $8 US. Phone number for Durham Radio is 888-426-1688. I highly recommend them.

Cookoo! Cookoo!

Yes, I know, Randy - it's Two O'Clock

Now, will you try to come back to Earth and read what I actually write, instead of making things up in your brain... go back to the original statement(which you've attempted to WARP into something else)... that "The use of External Power Amplifiers provides virtually no benefit on MURS and GMRS".

I'll tell you what - you can also quote me on this one: "The use of Mobile Radios is not a significant cause of interference on MURS".

But, now, try to use and understand MY WORDS and MY POSITION on the issues - not some words you've made up in your own head that you THINK represent my position.

Definition of a bigot: A person who holds blindly and intolerantly to a particular opinion.

Yes, Randy - you are a MURS data bigot... because it is impossible for you to be reasoned with on this issue.

Steve,

Have you tried power up the hub with all of the data cables
disconnected? Many times it is the power line that is letting the RF
out of the hub/device and not the data cables. Just a thought.

Glenn

In article <y64O8.20174$MW2.1090463@news4.srv.hcvlny.cv.net>,

99% of their salespeople wouldn't have a clue about this. That's normal. You need to get a catalog and supply the item number to them. Give them an item number and they usually become quite helpful.

From: JT <ff-micp@spamsuxattbi.com>
Message-ID: <IA8O8.175616$352.8884@sccrnsc02>
Source record: 47103

I sent in my 780 for repair in late April; they gave me a June 6th ship date (at the latest supposedly); on June 7th I called them, as the website didn't reflect the unit being shipped. They told me that the unit had been tampered with (not true), and that if I wanted it repaired it would cost $56. They had me over a barrel, so I did pay them. I am amazed that they had the unit for the better part of a month, and apparently didn't even touch it until June 6th. Here we are a couple of weeks after I have paid them, and no scanner, and it has not even been repaired yet. They sent me an e-mail saying it was due to be shipped yesterday, but it still is sitting in the warehouse as we speak. When I called a customer service rep today, the guy was rude and told me I'd get it "in a couple of weeks maybe" and nothing more.

Buyer beware; apparently customer service ends at the time of the purchase with Uniden.

4289. New Icom r/c software available

Newsgroup: rec.radio.scanner
Date: 2002-06-13 22:31:43 UTC

Check out http://www.parnass.org for some new Icom
radio-controllerware from Bob Parnass, a top-knotch/top-level
developer, technical writer and amateur radio operator. I don't own
any Icom radios so I can't vouch for how any of this software is, but
I've read some of Bob's articles so I don't think you'll go wrong in
trying them out.

That might work.

I had just been using the regular antenna that came with my bc780xlt,
collapsed and sideways, with the scanner on top of my dash. It worked
so so - well enough to hear the local PD, but not too much further
out.

This morning I went out and picked up a Radio Shack magnetic mount
thing (Part number 20-032). Holy cow what a difference that makes!

I've had frequencies programmed into this thing since I got it a year
and a half ago that I'd never heard traffic on. As soon as I hooked
that thing up, I was hearing all sorts of stuff.

So maybe I'll just stick with the mag mount. If I'm gonna go
somewheres where that is not an option, I can always just stick it
back in the trunk.

>
> Any suggestions?

You need to mount the antenna on the car, not inside the trunk. Putting an antenna in the trunk would shield the antenna from RF, so wouldn't work well at all. You would only be able to hear the strongest signals, and that's probably only if you're driving by the antenna tower.

If you don't want a big huge antenna, you might try one of those cellular look-alike scanner antennas. They seem to work well. On the other hand, get one of those splitters that you connect between the car antenna and the car radio. This will split the existing car antenna so you can use it for a scanner antenna and its original purpose.

I've been playing with his TK-75 software that controls the Icom R75. Aside from occasional bouts of locking up, it is a fine program. I haven't determined why the program locks up, but it may be my computer as nobody else has reported the problem.

No, I am not stupid, asshole. Someone insulted me a while back for mentioning "the b word", and I was just defending the product (although I won't defend their customer service, but that's another story). I am acutely aware of what Realistic produces, and who produces it for them, but they still don't SELL anything that is as good as the 780.

Not to break your bubbles but I also had a Older Uniden bearcat 600
XLT with no nothing working and paid via credit card the $50.00
service charge and as predicted per their web site and via tracking I
had my scanner back in 3 weeks fixed and as they said. Maybe lucky but
happy to have it. It is the one with the preamp and CTCSS tone board
underneath I installed a few years back. Why I wanted it fixed so bad.

4300. FYI: Pro-2053 Software that works correctly

Newsgroup: rec.radio.scanner
Date: 2002-06-14 00:55:02 UTC
From: scorp-99@nc.rr.com
Message-ID: <2ad43f3c.0206131655.6a8e967b@posting.google.com>
Source record: 47114

Anyone interested in using their PC to load/configure their PRO-2053
may want to read my comments on available software that I've tried.

Disclamer: I not trying to assist anyone with sale of their
product(s), I just want to pass info along for others that may be
going through the same thing that I did...

As I'm sure you may already know, the radio shack CDROM/Data cable
does not work for the PRO-2053 and they do not seem to be in any
hurry to make one available. After spending a few hours surfing for
information on cables and software, I found a combination that
works perfectly.

I found two places that sold cables:

1) http://www.pfranc.com/pclink/ScannerDeal.shtml# $22.00

1-way and 2-way cables, but requires you to also buy :
Radio Shack PRO-93/PRO-2053 you'll need both of these: Radio Shack
sub-mini to mini stereo adapter #274-397 and Radio Shack mini stereo
to mono adapter 274-368c

2) http://pro93.com/ 1-way and 2-way cables (Buy the 2-way) $23.00

Works without extra adaptors (Works for me!)

I also found 2 software packages, both of which is free that will
read/write the Pro-2053 radio.

1) http://www.blackbagsoftware.com/pro93.com/pro93accessories.zip

At first I thought this was a great tool, but quickly found that it is
full of bugs and the interface is not modeled very well. It also lacks
functionaility and requires two different applications to read and
write. I spent several hours with this package before giving up.
It started out looking good, but ended up a big loser.
This application would not always download the changes to the
scanner correctly and would leave the radios memory void of any
settings. Bad........, very bad...

2) http://www.starrsoft.com/freeware/win93/Win93.zip

After learning from the first package, I quickly learned to appreciate
the features of Win93. I also was very happy that it worked without
a problem. (no Out of Bounds errors and program faults!!!)
This application allows you to search on several things, copy/paste.
Move freq, tags and talk groups around and really control your
radios memory. I'm tickled with this application.

Conclusion... Use Win93 and buy a 2-way cable from Starsoft.
The cable is very simple and I may take the time to generate
the instructions for building one from RatShack parts in the future.

This is a radio shack pro 90 300 channel trunk tracker handheld scanner with
a brand new battery pack with nickel metal hydride batteries.
Freq range 29-956 mhz
Works and looks great condition.
Also has new belt clip.
Comes with ac/charger antenna and service manual.
You can download the manual from radio shacks web site.
$130 shipped lower 48 states ups insured.
E-mail me direct or for pics of scanner.

Thank you for the back ground on Mutes Radio Service activity and there capability
I would like to point out that the 154.57 "blue dot" and 154.6 'green dot" are long running 5 watt itinerant channels and apparently they're being shared with MURS.

I have noticed that if you mess with the radio (manually) the program has a
tendency to lock up.
I mentioned this to Bob and he said he was aware of that problem. Other than
that, it's a FINE program.

I have been using Bob Parnass's tk8500 for my Icom R8500 for the last month and it is great! For anyone who has used the Icom software for this radio, I would highly recommend trying Bob's software. Not only will it allow you to download a database file (*.csv format) to the radio, it will also let you download to an individual memory bank.I have been looking for a program to do that for some time now. A simple feature, but worth its weight in gold. If you have used the Icom software, you know what I am talking about. Real cute program, but not much practical use since its native format (*.RS1) is unreadable my anything I can find. Give Bob's program a try, you will really enjoy it.

Just wanted to put in a good word for Stephen Gulyas. He makes a BNC-to-SMA adapter, which you can purchase from him at gulyas@earthlink.net. Got it fer me IC-R2. Sturdy, works like a charm. Tested it with the antenna from my Pro-94.

Also, anyone got any suggestions for the replacement of the rubber ducky? Mostly use the R2 for 40 to 150 MHz range and 400 MHz and 900 MHz and thereabouts. Do I get a telescoping, or several tuned for specific freqs??? Thanks, and thank you, Stephen Gulyas.

I use the computer cable and software to program and save memory contents
of the ICOM
IC-R2 using this set up makes programing this little gem really easy. I
can do it manually,
by hand and often times will save a manually entered memory file onto the
computer floppy disk.
It's just a lot more convent to us the computer, with the R-2
Doing band searches with the TONE SQUELCH engaged helps find frequencies
using the same tone
the search will not stop on an active frequency UNLESS the tone assigned
is present!
This helps to find a radio user, that's using other unknown frequencies,
with a known tone squelch code.
Too bad the R-2 DOSE NOT support Digital Tone Squelch. But the Tone
Squelch Search feature helps
find out if a user has tone squelch and by comparing this to a frequency
directory and wed sites that
list frequencies WITH TONE CODES you can ID a station that is not giving
out their call sign on the air!

I use a RADIO SHACK FRS belt carry cast to protect and transport the R-2.

Let's set the record straight.

Some Citizen Band people being un-licensed and un-regulated think they can just move into ANY band or on frequency they damn well
chose and play their games.

Sooner or later and it's my belief "later", the FCC - Big Brother will pounce down on them with both BIG feet. The unfortunate
part is it's been way toooooo long for action.

I am strictly talking about the ones with big mouths who do as they damn well please without regard to any regulations.

For the most part CB people are no different than any other radio people, it's the ass holes that make them look bad.

Have a nice day from a REAL Old Timer.

Pappy
20Q2036 - My first CB license

PS: Against my normal policy I left the cross posting in place.

I think I may have located the problem. Occasionally with the RS-R75
software from Icom, it pops up with a box that says I've lost connection.
Apparently I have an intermittent connection problem at times. Bob's TK-75
software locks up if the program is run with the receiver off or otherwise
loses connection.

> any help would be much appreciated

Contact www.scannermaster.com and go to the "store" they offer
programming for the 780. But, it will cost you. I looked into it, I
forget exactly how much it was going to cost, but you provide him with
"ALL" the cities, counties and such, and he will program it for you.

If you get the winscan 780 program, I believe he can program all the freqs,
then just Email you the file. Load the file into the program, connect to
your scanner, and Viola' everything is done.

I also find it difficult to program my 780, but what I did, was buy one of
the 780 software programs, plug in all the freqs, and then send it to the
radio. I found it much easier, in fact, I haven't even read the manual for
my 780 yet. Most of the programs I have used (winscan780, scanpro,
trunkstar) all have the function of entering a freq, then using a pulldown
menu, you can select trunked, or conventional, Edacs, and so forth. So, if
you choose not to go the scanner master route, try the trunkstar 15 day
trial, and see if it works for you. Of course you need a 9 pin serial
cable, that either you can get from radio shack, or if you buy some
programs, the cable comes with.
Sorry for the run on sentences.
If you need more help, feel free to Email me.

Hope that helped,
breezyjr (joe)

4322. L-Band omnidirectional mobile antenna

Newsgroup: rec.radio.scanner

Hi all,
I have a world space satellite radio. I'd like to listen to world space satellite in my car. But they didn't supply mobile omnidirectional antenna. I can listen to it only by installing the antenna to the fixed direction. Is there any omnidirectional mbile antenna for GPS receivers or other satellite receivers ? World space uses 1452mhz ~ 1492mhz frequency.
Thanks in advance.
from Ernie.

4327. GE/Ericsson IPE-200 question

Newsgroup: rec.radio.scanner
Date: 2002-06-14 15:24:25 UTC
From: Tinkerer <Tinkerer8888@hotmail.com>
Message-ID: <JUnO8.16334$hF5.574529@news2.east.cox.net>
Source record: 47142

I have some GE/Ericsson IPE-200 EDACS radios.

They work fine except occasionally, they stay on a
channel after PTT is released, unsquelched making
noise. The next user of that channel is heard.
Sometimes, the problem will self-correct, sometimes
not. I can't find anything in the personality parameters
that will affect it. All radios fail in exactly the same way.

Anybody know what this is?

Doug

4328. Windsor, Ontario police and Border Patrol frequencies

Anyone got 'em? I'm headed to Detroit next month, and I hear the areas near the Ontario-Michigan border crossing can be pretty interesting in the early morning orders. 19 and 20 year-olds crossing into Canada to drink (where legal age is 19 vs 21 in Michigan), then trying to get back into the U.S. after the bars close and they've had way too much to drink. Should make for some fun listening. (hic!)

Hi Tom,

You've correctly described the situation.

An intermittant connection between the receiver and computer
will cause tk75 (and tk8500) to freeze. I wish it weren't
so, but it was a tradeoff I made when designing the software.

Have fun and thanks for your support.

I don't think it is a stretch or a misunderstanding of your words "The
use of External Power Amplifiers profides virtually no benefit on MURS
and GMRS" to state that your position is extra power on MURS will not
help your communications. The "benefit of MURS and GMRS is
communications. Amplifiers DO help with communications. If it didn't
everyone would be using 1/2 watt radios in EVERY radio service. I
would like you to answer this: Are you saying that extra power does
not help your communications capabilities?

>
> Definition of a bigot: A person who holds blindly and intolerantly to
> a particular opinion.

I don't know where you get your definitions, but the definition my
dictionary has for bigot is:

bigï¿½ot
n.
One who is strongly partial to one's own group, religion, race, or
politics and is intolerant of those who differ.

The inplication of "intolerant of those who differ" would be those who
differ to his/her group, religion, race, or politics.

Those who are losing the arguement will resort to slurs such as
"bigot".

I received an e-mail from Scott Carpenter (of Uniden) offering help on resolving the scanner issue with Uniden, which I appreciate. Fortunately, Lanastasia Newton at Uniden had already gotten to the bottom of things with a couple of e-mails (which I'd suggest using in the future; the people that answer the phones all had different stories, and no one seemed to be able to do anything about getting things moving), and the scanner is on the way back here at last, hopefully repaired.

It seems that maybe someone there does care after all; just not some of the people that answer the phones.

Not as exciting as it sounds... we dont have a foot bridge, so it's done
via automobile. There was talk of giving the customs agents the power of
arrest in regards to drunk drivers also, and from what I remember, I think
it is the law now.
The most fun I had while 19 or 20 and performing the border crossing, was
saying 'You Ass' (US with a drawel) when asked my citizenship.

4338. BC 147XLT repair ?

Newsgroup: rec.radio.scanner
Date: 2002-06-14 20:57:17 UTC
From: Lou <tech@dp.net>
Message-ID: <aedmqg$5jf$1@news.dp.net>
Source record: 47054

Anyone repair OR have info for repairing the BC 147 XLT scanner?

Maybe even an owners manual info would work. I have one here which "seems" to refuse to hold frequencies in memory. I have absolutely no information on this unit.

Problem: If I program it, leave it on, it works fine. IF I unplug it as I did today for about 3 hours or so, it is wiped out when I turn it back on. I get an instant "L". When doing a review on any channel, it shows all 00000s.

1. What is the time frame for memory retention?
2. How is it done?
3. If this thing is in need of repairs (which I could do), are the parts and literature available to do it ?
4. IF ANYONE reading this has the repair info and would be willing to sell a copy (provided the parts are available to do the job) then I'll gladly take a copy if you let me know the cost. IF the parts aren't available, then there is no sense wasting time.

Please reply directly. Thanks.

Memory is retained using power stored in an electrolytic capacitor. Check R104 which should be 560 Ohms and C104, 1000uF 6.3 volts rating. If you decide to replace the capacitor, put in the biggest one that will fit to extend the backup time like 4700uF 6.3V.

I got mine on ebay, seemed the easiest way at the time, ck the scanner area. Here's PrimeCell's info: www.primecell.com 4.8v 1650MAH (NiMH) p/n PC-BP1600-NIMH $24.50 Or here's another source for you: Battery-Tech, Inc. www.ebatterytech.com 4.8v 1500MAH (NiMH), p/n HI-092CM-BCSM w/plug $29.00. According to the flyer I picked up at Ham-Com, they are offering an internet introductory special - free shipping on your first order.

PrimeCell's battery is a bit bigger and a bit cheaper, but you pay shipping, take your pick.

Another good source is Lee's Electronics. http://www.leeselect.com. They have a 4.8V 1700mAh (NiMH) for $24.50. Largest out there, as far as I know... I own one, and it works like a charm... Runs the scanner forever!

Honestly, I should have thought of it, but I figured it was just not
available from Radio Shack, as the local place carried the insulators for
the TO-3's, but had no place at all for the TO-220's. I just assumed that
it was not a supplied product, or the store would have had it available...

Read the rest of my post, not just the Quoted portion! I'm beginning to think some people are only interested in half the story!

Quoted for your convenience, as I see you were already too lazy to look on your own:

"And if I were as RICH as you, and could afford to fork over the money for a catalog, I would have had one that I could have looked in... Go ahead, tell me they are free with a purchase... BULL SHIT. Not around here... Nothing is free. Ask for one and they laugh in your face..."

It appears that you are mistaken... Who created it? According to one of the major Newsgroup providers (Supernews) no such group exists, nor has a request for such a group ever even been documented... See below:

****
In article <ugkerneq7eof51@corp.supernews.com>, FeMaster wrote:
> Supposedly there is a new newsgroup that has recently been created.
> Hopefully you will be able to add it. It is rec.radio.scanner.marketplace
.

as far as I can tell this group exists solely in the imagination of one poster. It certainly hasn't been through the RFD/CFV process required for new groups in the big-8 hierarchies (which include rec.*).

--
Andrew, Supernews
http://www.supernews.com - individual and corporate NNTP services

****
I don't expect SN to add it. Rec is part of the big-8 and no such newsgroup has gone through the approval process. There isn't even an archive for a bogus newgroup message at isc.org.

Jim

****
You might want to reply back that unlike alt.* groups there is a strict procedure for adding a rec.* group to the internet. Even an alt.* group wont be added to supernews unless a control message is created but at least with alt groups just about anyone can do that. The orignial 8 hierarchys like rec.* have a long discussion and approval process.

Some places might add it and so some people may claim to see it and be able to use it but it wouldnt amount to much more than a local newsgroup like an ISP might create for its own in-house use.

Source record: 47094

For Sale: like new Yaesu VR-5000, all mode, 100 kHz - 2600 MHz
communications receiver. Purchased new from AES, Orlando. Less than 10 hours
operating time. As new, in box with accessories.
Price - $550 including UPS shipping in 48 US states.

Reason for selling? - Yaesu never produced promised software programs for
computer control and now says they will not be doing that. My application
requires software control and I do not have the time nor inclination to
write my own. The easiest path is to start over with another receiver.

If interested, email to: LPrice@ieee.org

Hi Jim,

Appears that you need to add a line to your
C:\autoexec.bat file, then reboot:

SET tk75=C:\tk75

If you are running Windows XP, or do not want to
alter your autoexec.bat file, here's a different strategy:

Create a new ASCII batch file, named C:\tk75\tk75.bat

It should contain these lines:

SET tk75=C:\tk75
"C:\tcl\bin\wish83.exe" "C:\tk75\tk75.tcl"

You can run this batch file, C:\tk75\tk75.bat, to start the program.

If you create a shortcut to the batch file
the shortcut works best if it is set up to run minimized
and close on exit.

Good luck,
Bob Parnass, AJ9S

[snip]

There's an item on the site that says he's about to have a batch of
cables that won't need adapeters.

>1) http://www.blackbagsoftware.com/pro93.com/pro93accessories.zip
>
>At first I thought this was a great tool, but quickly found that it is
>full of bugs and the interface is not modeled very well. It also lacks
>functionaility and requires two different applications to read and
[snip]

If you check the properties of that program, and maybe browse through
it looking for legible text, it appears to be a developmental version
of the program GRE was writing for the 93/2053. It was set loose
anonymously. No idea by who or why. It just loads the scanner.
There are two programs available to transfer from the scanner to a PC,
but with Win93

>http://www.starrsoft.com/freeware/win93/Win93.zip
[snip]

there's no reason to bother.

Signal Intelligence has a package that does both the 92/2067 and
93/2053:

http://www.scanstar.com/ts9293.htm

I have not seen *any* reviews or user reports on that. For a good
rundown on everything available for these scanners, visit
www.pro-92.com . That includes build-your-own cables.

>Conclusion... Use Win93 and buy a 2-way cable from Starsoft.
>The cable is very simple and I may take the time to generate
>the instructions for building one from RatShack parts in the future.

If you do, try to put it up on the file areas at www.pro-92.com and
the Yahoo! PRO-92 and PRO-93 groups. Or at least post to those boards

the link to where you have it. I think there are a lot of people who would be bold about building their own if they had that info - especially a list of RS part numbers.

Yeah, if it was the one I am thinking of, that is correct. That is the only one I can think of that was specifically designed for in-dash use, but I could be wrong.

I am very new to this, thus my question will be fairly basic... I club race (SCCA) and would like to be able to listen to corner workers about the stuff that is happening on the track. What is the best unit for me? is the the Radio Shack PRO-89, or is there a comparable Uniden model or a different brand scanner ?

Thanks in advance!

I am looking to get a new scanner to use in the car - tired of moving the ol bc780xlt between there and the house.

Actually, I picked up a PRO-2067 this morning, but ended up taking it back - I wasn't real happy with it.

I was sorta thinking of another 780, but its kind of big. I liked the small size of the 2067, but didnt care too much for the scanner itself. (Didn't like that i'd have to order a $70 package to program it with the computer, either)

Anyway, what are you guys using in your cars? I'd like to find something maybe a little more compact than the 780....or....maybe I'll just move the 780 to the car and get a new base scanner. Hmmmm decisions decisions!

If you're unhappy with the 2067, sounds like the only choice you have
that remotely compares to that is another 780. I just bought a 2067
for my car, and I'm fine with it (but I'm using freeware and a
home-made cable). But it sure ain't a 780, although it is $100 less.

At Mid-Ohio, I've used a variety of handhelds, all of which will work fine for race control, safety and all that. Even the cheapest, oldest scanner can handle a few common freqs. But, do you want to listen to the other guys while they're racing? If so, maybe you want something with alpha tags, like the Pro-92 or -93, where you can put the drivers name in with the freq so you know who you're monitoring (unless you have a really good memory).

I am in the same boat; constantly moving the 780 between car and house. I am going to get the 785 when it debuts, and I'll put the 780 in the car, which I think is the only option after getting used to the 780.

The $70 package has been discontinued. But that doesn't matter,
because you can do better for less than half that.

Visit www.pro-92.com, and look for the software and PC interface
pages.

Free Logging Database built with Access2000 available, complete with Station
Locator containing
over 5000 International Broadcast Stations.

Perfectly suitable for both HAM operators and Shortwave Listeners alike.
With the "UserID" field, will also suit Radio Clubs.

Records the following:

* User ID
* Date
* RX Freq
* TX Freq
* Pwr
* Mode
* Station ID
* Station Class
* Tx Site
* Tx Type
* Country
* SoundRecording Path
* SINPO
* Equipment Used
* QSL Record
* Free-Hand Comments
* AND MUCH MORE

In addition to the above, there are a wide variety of printable REPORTS
based on the information logged.

Feel free to find out more at :
http://web.ukonline.co.uk./sadmutha/ar3000/mcqlog.htm

It's FREE - no silly adverts or registration!

I was thinking about holding out for the 785, but I don't need the
digital option.... and I'm also a little torqued off at uniden for
making a 1000 channel scanner with only 10 banks. Seems wasteful to
me.

I'll probably end up getting another 780.

Hmmm hadnt thought about this before but the 895 might work in the
car.... it's a bit cheaper than another 780

I got a second 780 to use in the house because like you I got tired of moving the first one back and forth. There
just isn't a better scanner out there right now.

Go to http://www.qth.net and read through the PCR-1000 message forum archives. There are at least 2 freeware programs out there that will reset your radio's eprom with factory defaults. The freeware program PCR1000BUR will do this and also will unblock 800 MHz frequencies if your radio has an early serial number. Check out the forum for further info.

I hear ya there.... I think the 780 has spoiled me. It's easy to use,
easy to program via the computer (no funky cables needed, just the
serial cord), reception is pretty good. it trunk-tracks, what more
could you want?

Well I do wish it held more channels, but oh well. I'd hop on that 785
in a heartbeat when it comes out, if only they'd split those 1100
channels into more than 10 banks!

I had a thought i would just like to share and see what others think. My local RadioSchack has a 1 channel cb radio on sale for $4.00 I was going to buy it, open it up and replace the crystal with one from a broken cordless phone, or maybe find a crystal thats the same freq as a local McDonalds. This is just so i could transmit and have some fun. Looking for others thoughts.

My thoughts? I think you just announced - quite literally to the entire world - that you intend to break the law if you can. Besides which, a CB radio will no doubt NOT transmit on a McDonald's frequency even IF you could get a crystal for it AND the proper CTCSS or digital tone that most fast-food radios use.

I think you need to get a life.

i think the uniden "sport cat" might be the sort of thing you are looking for. It seems to be designed for racing monitoring and doesn't have all the air/public safety sort of stuff that other machines do (like trunking, milair frquencies....) but others here who actually do racing listening might know more.

Right now I'm using a RS PRO-2026. Another good travel scanner is the Uniden BC700XLT. It has 50 memory channels, plus will scan service scan at the same time. The scanner doesn't have a keypad, so memory channels have to be entered by tuning to the freq and then pressing the enter button. This is a good scanner for mobile use as you don't have to keep entering different frequencies when you move from region to region.

The 2026 also has service scan, plus keypad and 50 more memory channels. It is only slightly larger than the BC700. The only thing I don't like is that the display & buttons seems to be a mite too small for mobile use.

Also, the CB will transmit in AM and the McDonald's drive through uses FM mode. Crystals aren't really that easy to find for the right frequency, and if you do find them they're usually somewhat expensive. I believe that the RS handheld CBs use crystals with a 455 kHz offset, so it may be unlikely he'll find the right crystal.

I really don't see how. The only way you would damage your scanner is if you hooked it up to a transmitter with the same antenna. That would fry your scanner when you transmit. But two receivers would work fine without any problems.

Well, I put a 2067 in my mobile, and have been mostly pleased with it. After I bought the RS programming pkg, I picked up a second one (for the cable - spare) for FIVE DOLLARS at the Ham-Com hamfest in Dallas! I'm not sure, but I think these are the people: www.shopjubilee.net give them a try and see if they have any more. The 2067 has some great features, and a few drawbacks, depends on your needs.

Currently I use a BCT 7. It's not the best of scanners, but is effective. Eventually I'd like to move up to a "real" scanner (One I can program what I want to scan, not just a generally search). The replies to your posting have been somewhat helpful to myself so far.

Good luck on your search,
PH

It's a sad trend, but it does seem that way... I find that if I need
something, Radio Shack doesn't have it; and it's not just electronic
components either.

I think it's high time for a name change for them. They are so far from a
"radio shack", that it's not even funny. They scarcely stock anything that
anybody would use in their radio shack. It's turned into a junk store for
the RCA brand name...

I find it funny. on our RS canada site. they have this posted.

RadioShack Canada is blowing out thousands of electronics at incredibly low prices. These products must go! These items include the hottest names in computers, audio sound, video, gaming and more. Now is the time to get that new stereo, upgrade your printer, or get a better answering machine. Chances are we'll have just what you're looking for. However, these Inventory Blow-Out items are available in-store only. Limited quantities, No Rain Checks.

I really don't mind the price on the 2046 though.

$129.99
Save $170.00
reg $299.99

But I guess the electronic store is better now.

Dev

4426. Is Motorola SmartNet Trunking MSK or FSK?

Newsgroup: rec.radio.scanner
Date: 2002-06-17 17:02:42 UTC
From: johnfofawn@hotmail.com
Message-ID: <d89364bd.0206170902.476080e1@posting.google.com>

I know lots of people use an FM discriminator to demodulate Smartnet,
but I've been looking at some plots of signals I recorded and it looks
more like MSK than FSK. Can anyone else confirm this?

I am sampling the IF output of a receiver so there is no FM demod
taking place prior to my sampling. I brought the signal in to Matlab
which I'm using for analysis.

Smartnet is 3600 bits per second (baud) and the tone spacing is
3600Hz. Right?

Thanks,
John

Let's not forget that the 780 has a 'normal' (DB9) serial port on it. You don't need an adaptor anymore to connect the serial cable from the 780 to your PC. In fact, you're almost better off running the 780 from a PC because of all the settings involved. Not to be putting down the 780's user interface, it's quite intuitive once you get used to it.

Of course, all the new laptops are missing a DB9 serial port, and only
have USB ports. So one still needs an adapter, just a different one,
USB-to-DB9, which may, or may not, work well.

I have a 2006 mounted in the console storage compartment of my 2000 Grand Prix. Secured it with a few pieces of foam rubber to eliminate vibration and hooked up a Radio Shack amplified speaker mounted under the driver's seat. It's a bit hard to see the display, but works great! When you close the storage compartment lid, you can't even tell it's in the car.

I am offering Maxrad BNC antennas (NEW) for sale:

I have VHF-Airband (122.90MHz), 140-150, 150-160(public service),
160-170MHz(railband, WX, Federal) $9.50 each

UHF-Mil-Air $8.50

UHF 430-450, 450-470MHz stub ducks $7.50 each

They are available in straight BNC (exposed or covered BNC) or right angle
BNC (for rear of scanner mounting). Covered boot covers below BNC by 0.085"
forming a water-resistant seal & added support of antenna!

Add $3.50 USPS Priority Shipping for up to 6 antennas...

JPGs available (specify type of interest) via email. Please reserve yours
today via email along with your shipping address for further details &
payment information.

Write me for all your antenna needs or to order a special frequency!
Emails, orders & questions promptly answered!

Thank You,

Chris

Okay, now I'll follow-up on my own message.

First off, thanks to those of you who took the time to give me serious answers. I had read the manual, but homing in on a particular category of potential activity (local fire sirens, for instance) hasn't been all that intuitive. It hasn't been for me, anyway, It isn't like changing channels on the television. The scanner does too much, too fast. (Just like it's supposed to do.)

Simply bumping the scan button doesn't get it. Unless something happens to be going on at that particular instant on the frequency(ies) that I'm wanting to listen to, all that usually does is to take me right back to the same bullshit conversation I had previously been locked up on and was trying to get away from. Either there, or to some other bullshit conversation.

The key seems to be in organizing the frequency hierarchary into sensible banks, and then being able to quickly lock into / out of entire banks. The scanner is designed so that is capable of doing this. It's mostly a problem of setting things up logically -- and again, this isn't all that intuitive. Not at first.

On the next level down, the problem seems to be to lock-out specific channels or to go manually to a particular channel. This isn't by any means difficult to do, but it's not something that I think any newbie can do right out of the box. They might know how to do it in a technical sense, but they probably can't actually pull it off in the real world until they get familiar with the local frequencies.

I still don't have it all worked out yet, but I'm getting there.

I do think it will be a big help to be able to hook the scanner up to the computer for memory organization.

Thanks again to those who answered seriously.

Harry ;)

usually on some RS scanners. if it locks on a channel. press scann again. it
should not stop it. just go to scannin again. then press manual or whatever
the name of the button is on yours to stop it. You can always just press
manual and manual scann to that channel.

> Either there, or to some other bullshit conversation.

Part of your problem is that by the time you hear sirens, the call has already been dispatched. So you've missed the initial dispatch which will give you all the basic information about the incident.

Once you hear sirens and have already missed the dispatch, the logical step would be to manually select the channel you have the local PD, FD, ambulance, etc on. I normally keep them in the priority channels, so if I hear sirens I just have to press the PRI button. Once units get on scene, you can normally figure out what kind of call it is from their ensuing traffic.

Hi all,

I have posted my last PRO-2006 up on ebay for auction. This is the nicest one I've had, and the nicest used one I've seen. It's truely in near new condition. I'm offering a warranty on it if the buyer is not satisfied. Please have a look at:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1360940145

thanks!

Stop smoking the crack! You can get a Pro-93 or Pro-2053 on sale at Radio Shack for around $160 to $180. These sales come up very often and these scanners have complete trunking abilities, alpha numeric tagging, computer programing and more... lower that price quite a bit and you might sell it.

This is one of the things that was frustrating me.

Probably due to having watched too many television shows, I expected
that the fire (or police) vehicles would be almost continuously
transmitting while they were in route.

Not so.

The initial emergency dispatch calls typically go down very fast, so
they can be easy to miss. And there are rarely any in-route
communications. Usually none at all.

I should have mentioned in my previous post that I also did not have
my priority function sorted out well. That's an understatement -- I
actually had it set to catch the trains that run through town.
Since I like trains, doing that seemed to make sense at the time.

Another problem I have is that I live in central Virginia. This may
not make sense to people who live in urban areas in the North, but
Southerners can be: a) maddeningly slow when they're not in a hurry;
and b) extraordinarily fast when they are in a hurry.

The upshot of this is that it's perfectly possible for, for
instance, a Sheriff's unit to take several minutes to run a routine
28 on a couple kids, while a fire dispatch call can go down in a
heartbeat. The scanner would keep going back and catching the
danged deputy, who invariably seemed to be talking as slowly as
humanly possible -- pausing, sniffing, and correcting himself while
leaving his mike keyed.

The dispatchers -- who are usually females here -- are usually much
better. They tend to be more consistently efficient than the boys.
But there are a few of them that are every bit as bad, if not worse.
There's one who seems to think she's on a cell phone.

Yet one more mistake I think I made (as a newbie) was to try to scan
too many jurisdictions / frequencies. My main real interest is in
the very local stuff, but I had plugged every possible frequency
into the scan banks.

The scanner is so sophisticated that it was very easy to hunt down
all the active frequencies within listening distance -- without
having any idea who or what they are associated with -- and then to
collect them into memory. So, that's exactly what I did.

In retrospect, I think this was a mistake. I had more going on than
I was capable of listening to or of managing. I think most newbies
would be better starting off with a smaller, more targeted bag than
I did. Once they (we) get used to operating the scanner, then that
bag can get bigger.

> Once you hear sirens and have already missed the dispatch, the logical step

> traffic.

This is what I'm now figuring out how to do,

They do consistently report their arrival, and there are usually
some follow-up calls that give the location and so forth.

Based on all the above, the strategy that I'm going to is this:

- Reduce the number of frequencies that I scan

- Organize the banks in a way that works for me

- Get the "right" local emergency frequencies on the priority
function

- Get good at locking-out and locking-in

I used to work for a newspaper, and I have some thoughts about doing
that again. So, the next steps might involve being prepared to get
to scene with a camera and a press-pass. Those are every bit as
complicated, but I'm more familiar with how to accomplish them.

Thanks!

Harry ;)

If it's the long antenna whip for the top, it will reduce your reception on the low bands (30-50mhz). If it's got elements similar to it, in the actual cone shape of the antenna, it's loss will probably not be missed much for reception purposes.

One of my pet peeves is officers who clear from a minor call, such as a noise complaint or parking complaint, and give me a two-minute disposition when "10-8, problem resolved" would work. It seems like they always do that when I'm waiting to dispatch an alarm or domestic call or something, or else the phone is ringing.

Friends--

Can someone supply known freqs for air support, fed fire management,
and anything else useful. Please. We are starved for information in
the Durango area during the Missionary Ridge fire (summer 2002).

Besides the regular SO listed frequencies, the only useful one I've
found is 155.400 MHz, for the OEM channel, the local (and amazing)
county emergency management folks. The feds have command
of this fire now, and scanning has not found anything useful.

Any help is greatly appreciated.

##

3 Shot in Racist Rampage
2 women overpower gunman
on suicide mission

By ALICE McQUILLAN, DEREK ROSE and BILL HUTCHINSON
Daily News Staff Writers

A heavily armed black man screaming, "White people are going to burn tonight!" shot three people at a trendy East Village bar yesterday and doused patrons with kerosene before he was overpowered, police said.

Steven Johnson, 34, of Brooklyn, was on a suicide mission when he burst into Bar Veloce on Second Ave. and 11th St. with guns blazing and hate spewing from his mouth, said Police Commissioner Raymond Kelly.

"I wanted to kill as many white people as I could," Johnson told detectives after the 40-minute siege, which left Johnson and three victims with bullet wounds.

Patrons said that after he poured kerosene on them, Johnson yelled, "Everyone's wearing gas shirts now!"

"Do you want it hot?" Johnson asked terrified hostages as he began flicking a barbecue lighter.

Before leaving home, Johnson wrote a suicide note to his 10-year-old son and scrawled on the wall of his Williamsburg apartment: "Tell the boys in blue, I won't go easy," cops said.

"This individual is clearly deranged" said Kelly, adding Johnson was carrying three guns, a 30-inch samurai sword, 153 rounds of ammunition, a box cutter, 100 plastic handcuffs, a kerosene-filled bottle and the lighter.

Johnson ï¿½ whose rap sheet for weapon and drug arrests dates to 1985 ï¿½ also was wearing knee and elbow pads, police said.

"He wasn't very eloquent, but he made it clear it was racially motivated," said Ann-Margaret Gidley, 23, one of two women police praised for tackling Johnson and ending the standoff. "We all knew he had a gun and a lighter and we didn't want to die."

The drama unfolded around 2 a.m. when Johnson accosted two men and two women at Second Ave. and 11th St., cops said.

Johnson ordered Jonah Brander, 28, of Fort Lee, N.J., to hand over his wallet. But as Brander reached into his pocket, Johnson said, "I have a problem with you" and shot him in the torso, police said.

As Brander staggered into Bar Veloce, Johnson grabbed one of the women, Elin Juselius, 20, and followed him, firing wildly into the air. Before reaching the front door of the popular wine bar, Juselius broke free and ran.

New York University student Melanie Kaye, 20, was seated near the front door when Brander stumbled in holding his stomach and pleading for help. "Everyone thought it was a joke," said Kaye. "Then the shooter came in."

Kaye said Johnson shot Brander again in the torso and began screaming, "Get back!"

Some customers ran into the basement, broke through window bars and escaped. Others ran into a back dishwashing area, but there was no way out.

Johnson grabbed Robin Arzon, 20, by the hair and ordered her to bind people's hands with plastic handcuffs, witnesses said. He began pouring kerosene on people and threatening to set them ablaze, witnesses said.

At one point, Johnson attacked a born-again Christian woman who cursed Satan, witnesses said. "Don't you mention Jesus again!" Johnson told the woman, knocking her down and kicking her in the head. "Where's God now?"

Iso Shoji, 54, owner of a restaurant next door, heard the commotion and went to investigate. Shoji said that when he poked his head in the rear door of Bar Veloce he was shot.

Steven Johnson
"It happened in one second," said Shoji, who suffered a bullet wound to the left wrist.

After Shoji was shot, Gidley sprang into action. The slender, 5-foot-4 blond jumped on Johnson's back and another hostage, Annie Hubbard, 34, of Manhattan helped tackle him.

During the scuffle one of Johnson's guns went off, wounding Hubbard in the right shin.

Cops then stormed the restaurant and one Emergency Service Unit officer fired a single shot that grazed Johnson in the head.

"It was do something or die," Gidley said yesterday. "I didn't think it was time to go yet."

"They were very brave," Kelly said of Gidley and Hubbard.

Brander was in critical condition at Bellevue Hospital. Johnson and the two other wounded victims were in stable condition there.

>this will effect reception?

One missing won't hurt it greatly, but it will reduce the reception somewhat in that direction.

You can order the radials from Radio Shack, about $7 each, last time I checked.

In fact what the hell does it have to do with any of newsgroups listed?

Your need to get your head and your ass wired together.

This a fairly classic neo-Nazi recruiting post. And our winner of the DFC (dummkopf, First Class) has this strange agglomeration of groups assigned to him. If he succeeds, his grupenfuehrer has promised him promotion to ueberkellner.

Best leave him to goose-step in silence.

It was worth $175 five years ago, but with everyone wanting trunking and cell phones going digital, values for older scanner have been on the decline. I've picked up PRO-34s at hamfests for $35 to $50 over the last few years and that price range is dirt cheap for one. I'd expect $100 to $125 would be suitable.

That's a 20-014, it's a monster as far as scanner antennas go and had great write ups in the scanning magazines. Radio Shack closed them out about 2 - 3 years ago.
I picked one up but still have not got it up yet.

Police said Johnson's rampage may have been sparked by his battle with
AIDS and the March 4 death of his wife, who also had the disease.

> >

For Suspect in Rampage, Depression, and an Arrest Record
By ANDY NEWMAN

bout a week before a rampage in the East Village in which the police say Steven Johnson shot three people and used kerosene and a lighter to terrorize a bar filled with hostages, he called his father in North Carolina.

"He seemed to be doing good," Samuel Johnson said yesterday. "I asked him if he had any problems, and he said `Yes,' but nothing he couldn't take care of."

Advertisement

The elder Mr. Johnson knew from his daughter Michelle that Steven, who the authorities say has a long arrest record, had been very upset by the recent death of his girlfriend from AIDS. "He'd been quite depressed since that woman died," Mr. Johnson said. "He could walk through the house, hear her voice talking, he could smell her."

On Saturday, Samuel Johnson said, Steven visited Michelle at her apartment a few blocks from his home in Williamsburg, Brooklyn. "He was in good spirits," Samuel Johnson said. "He was laughing."

Later that night, the police say, Steven Johnson, 34, carrying three guns, a sword, and a spray bottle of kerosene, shot a man on East 11th Street in Manhattan. He then stormed into a crowded wine bar shouting anti-white invective, took hostages, doused patrons with kerosene, and shot two more people before he was tackled by two women, the police said. Mr. Johnson was shot twice by the police who arrived during the mayhem. None of the injuries were life-threatening.

Law enforcement officials said drugs appeared to play a part in the explosion of violence. "He is a lifetime drug abuser and criminal for 20 years," one official said, adding that Mr. Johnson's arrest record dates back to 1982.

Mr. Johnson was once a sought-after barber in Williamsburg. But Luis Marrero, a barbershop owner, said that in recent years he refused to hire Mr. Johnson because he appeared to have been using crack.

In addition to dealing with the death of his girlfriend, the mother of his 10-year-old son, in March, Mr. Johnson has AIDS and may have learned this only recently, the authorities said. But no one could account for the rampage the police said he took part in, or for the comments witnesses reported him making, that he wanted to kill as many white people as he could. Half a dozen people who have known him over the past 20 years said that as far as they knew, Mr. Johnson, who is black, had not expressed anger toward whites.

Samuel Johnson, a retired bus mechanic, said his son had no love for schoolwork as a boy, but that he took a haircutting course at a vocational high school and found his niche.

"He used to cut my hair," Mr. Marrero said as he stood outside his Quikuts barbershop in Williamsburg. "He was real good." Mr. Johnson, he said, was one of the first in the neighborhood to master the shaved-side haircut known as the fade.

"Back in the day," said Andy Cardona, who works at another shop owned by Mr. Marrero, "people would say, `I'm going to go get my hair cut by Money Steve.' "

Fred Rodriguez, the owner of the Metro Flicks video store across the street from where Mr. Johnson once lived, said he had a different haircut almost every time he came in.

While friends described him as peaceful, Mr. Johnson had at least 10 arrests, for robbery, weapons possession and drugs, the police said. In 1999, he caused a disturbance in Orlando, Fla., and was charged with disorderly conduct and resisting arrest, the authorities said. His most recent arrest was a drug charge in Brooklyn in February.

Sometime before he left his apartment in a public housing building on Humboldt Street in Williamsburg over the weekend, Mr. Johnson scrawled on the wall, "Tell the boys in blue I won't be easy" and left what appeared to be a suicide note telling his son he loved him, the police said.

Around 2 a.m. Sunday, the police said, Mr. Johnson burst into Bar Veloce on Second Avenue in the East Village. As he barked out orders and threatened kerosene-soaked hostages with a lighter, a 23-year-old waitress named Ann-Margret Gidley said she jumped on him.

"I saw the headlines, `Sixteen people go up in flames,' " she said last night. "I thought to myself, `This is not what my mother's going to see tomorrow morning.' " She slid out of the plastic restraints he had put on her and pushed herself into him.

"The sheer force of me didn't knock him over, so I started hitting him," she said. "He fell to the ground face down, and everyone who had arms uncuffed just started grabbing at him."

I've used my Uniden SC200 at races for a couple of years now and absolutely love it. My dad has a RELM which is a fine and more expensive unit, but mine has all of his features and then some.

With 200 channels and Alpha tags for labeling, it has all of the features you need in a race scanner including CTCSS and DSS.

I also have the WinScan Sport software which allows you to program the scanner directly from your PC. Several services provide downloadable files with all of the racing frequencies you need, especially for NASCAR. This software allows me to save and load different profiles for my scanner, as my channel setup at home is much different from the race setup.

I remember them selling something similar in the early 90's that I used on my scanner; preamp and antenna kind of deal. Really, it just added more noise and didn't help much (although I live in a more urban area, so it may be of some use out in the sticks).

Regardless of this guy's background, what he did was inexcusable, and I wonder if he'll be charged with a "hate crime".

This whole thread is stupid, and has no place in any of our newsgroups. The original poster should have his ass kicked for the subject that he posted. If he wanted to pass on some news, he definitely is going about it in an ignorant manner.

I'm thinking scanner because I don't believe they would have used the Motorola type jacks on any thing for HF/shortwave. Plus it looks like it was intended for mobile use which also makes me think scanner. Did you have the antenna that was supposed to be used with it?

430's have a "known failure mode" for the final output transistors. This is a combination of a circuit board that is a little to light duty and riveted transistor connections. I have fixed 2 of these, and one acted very much like yours with a pll / vfo "unlock".

Having received Grove material for many years I would almost bet
anything that power antennas were to be used on shortwave radios.

Heh heh heh ... I think every scanner buff has felt like this at one point.

First, instead of putting channels in the banks by service ("Fire," "Police," etc) try putting them in there by geographic area. You may have to duplicate some channels that cross city boundaries, but in a scanner with 100 channels or more, that's rarely a problem.

The scanner in my car is set up for the areas I drive through. Bank 1 is A-town, Bank 2 is southwest part of county, Bank 3 is northwest part of county, Bank 4 is interstate highway patrol, etc. As I drive, I turn on different channel banks. For a home scanner, set up one bank that is only for your immediate neighborhood ... police, fire, EMS, etc.

Second, I have an old 8-channel crystal scanner that's only crystalled for the local dispatch channels. Most of the time it's silent, until something happens.

Then, when I want to hear what's going on down the street, rather than scanning through 200 channels (where I'm more likely to hear some yokel school bus driver) I only have to scan 8 channels at a time. The programmable scanner can chatter away all it wants in the background.

Crystal scanners can be picked up for $5 or so, with crystals $3 to $5. Alternatively, you can find an old programmable 10 to 20 channel scanner and do the same thing.

Good luck. With patience, you will soon get better at the hobby (like any hobby)!

Even if it did have SSB capabilities, it would probably
not work to well (especially with narrow band crowded stuff) because of it's poor
selectivity.
But it is a great little receiver for what it does.

I have three of them so feel free to bid on any. Archer All-Band 3 element antenna. This antenna covers 30-60, 140-180, 400-450 and 450-512 MHz band. Assembled antenna is 70" tall and has ground plane 13' in diameter. Antenna is NEW and it is packaged in original box 4'x4" aproximately. It has PL-259 conncetor type for connection to scanner. No coax included.

New Features / Improvements:

- "Resume on Identified" feature now supported on BC780XLT and BC245XLT.
- "New ID Alerts" now set for each bank.
- Added backup file creation. A backup copy of each file is created before the new file is saved.
- Improved program response and reduced CPU usage by 50 to 75%.

The last improvement in my opinion is the biggest improvement. The performance was tested on 2 different systems. On one system the cpu usage was reduced from 18% to 5%. On another system the usage was reduced from 8% to 4%. These improvements go toward my original goal of have a low impact program. These improvements were not gained by sacrificing performance but actually increased program response time.

ID Tracker Version 1.8.0 and VB5 source code can be found at:

Open the case and you'll find a blue pot labeled "low pwr" or
something similar. Connect a power meter and dummy load and adjust
the pot till you get 2 watts. Power can be set anywhere from almost
nothing to 5 watts.

That looks like a good choice.

I've got a PRO-92, which has alpha tags and performs quite well at
races. But it's kind of on the heavy side. I played with a firend's
SC200 for a couple of days, writing software for it (got that about
90% done), and was impressed with how much lighter it is than the 92.
Does less stuff, but it does all you need for race scanning.
Including alpha tags.

And writing software for it was *much* easier than writing for the 92.

I remember reading the article up at Barnes & Noble a few months ago.
It had something to do with modifying the radio to allow you to
monitor a resonant frequency or something. (I skimmed thru it, didn't
buy the magazine, so I don't remember for sure)

no I don't have the antenna but I did get a hold of Grove and yes they
are for scanners....here's what they sent back,I do appreciate your
response at 100%

The unit is a Preamplifier for VHF-UHF reception, the same as our Pre4
which
was manufactured ages ago and has since been discontinued. You need 1
patch
cord. You connect your scanner antenna to the antenna in side and a
small
patch cord from the receiver side to your unit.

I had the same problem (as does so many other people). I ended up taking my RS discone down and replaced the radials (hollow tubes crimped onto theaded studs) with "all-thread". I don't remember the size, but I think it was a no. 6 or 8 all-thread. I bought pre-cut lengths (36") from a local hardware store (Home Depot) and just threaded them in.

The reception does not seem to be affected at all. And, I don't have to worry about the radials falling off any more.

Good luck,

sward

4532. Cheap Air-band antenna?

Newsgroup: rec.radio.scanner
Date: 2002-06-20 12:58:19 UTC
From: anonymous@spamhole.com
Message-ID: <940a228f.0206200458.230305aa@posting.google.com>
Source record: 46848

Hello-

I see that Radio Shack is selling their "High-Gain FM-Stereo Antenna",
part #15-2163, for $19.95. The catalog claims 120 mile reception.

I recall an article in Monitoring Times or Popular Communications
which talked about using FM-radio and TV antennas for scanner use.

My question, would this make a good cheapie-antenna for VHF aviation
listening, if mounted on my rooftop?

THANKS

Bill

4533. Looking for Shack Photos

Hello All,
I'm looking for onLine photos of other peoples radio shacks. I'm starting to accumulate a lot of radio equipment and my table just isn't working out (too small, no shelf space). I want to see how others have their radios arranged.

Plus this might be fun as it will get some URL's of shack pictures out where others can get some ideas.

I'll start with mine at http://www.MilAirComms.com/shack.html

Thanks
George

If you use a large external antenna, it might overload the radio.
No, it can not trunk and do conventional freqs at the same time.

Due to some changes in my situation I'm having to reduce my
radios just a tad bit and am offering the following for sale:

1: Sony "Wavehawk" 300 channel handheld. Great coverage,
receives military air. Radio is in mint condition. Includes
original box, antenna, and wall-wart. Sorry, I cannot find
manual but will certainly forward it to buyer if I should find
it in the future. $135.00 plus $10.00 shipping and insurance.

2. Uniden Bearcat BC780XLT Trucnktracker III base scanner.
500 channel with alpha tagging. Many more wonderful features.
Radio is in mint condition and in fact has less than 10 hours
total use on it. Box, instructions, wall-wart, and antenna are
all included. $275.00 plus $10.00 shipping and insurance.

3: Radio Shack Dx394 table top shortwave radio with Kiwa
modifications. I hate to part with this radio, but haven't the
time to use it at all anymore. Radio is in mint condition.
I do not have the original box. The instuction manual is
is nicely looseleaf bound and included the service
manual. Also included is original screw-in antenna.
$175.00 plus $10.00 shipping and insurance..

I'll sell all three for $550.00 plus $25.00 shipping and insurance.
I can only accept United States Post Office money orders and will
only sell/ship to continetal United States.
If interested, please contact me via e-mail at
rroewer1@tampabay.rr.com

Best regards,
Ray Roewert

>Anybody monitoring the band that can share their scanner recommendations????

Part of the reason why the band is "blocked" is that aviation radio
communications use Amplitude Modulation and many scanners only receive
Frequency Modulation.

Before you decide to listen in to the band, ask yourself what you're
scanning for --otherwise what you hear will be a bunch of
incomprehensible gibberish and you'll get bored pretty quickly.

First, consider that unless you're very close to the ground based
transmitters, you probably won't hear them. However, you will hear
virtually every aircraft for at least 200 km in every direction.

Second, unless you have a reasonably up to date aviation chart of your
vicinity, you still won't have much idea what's going on. The charts
typically depict approach procedures, airways, intersections,
checkpoints, frequencies, altitudes of various airspaces and so forth.

Most airports have a general aviation terminal or office where they'll
be glad to sell you charts, and airport directories. If you're really
cheap, and you happen to know a pilot, you may be able to get some out
of date books and charts (I often throw away my out of date charts and
book). They change, but not all that frequently.

Good Luck and Happy Listening!

Since 99.9% of my listening is Aviation (both Civil and Mil) I can say that it is more exciting than monitoring Police or fire comms! Out of 10 scanners in my shack only 1 is programmed with police/fire, the other 9 are aviation related freqs.

Not sure if you're looking for hand held or base but if you go to http://www.milaircomms.com/shack.html you'll see all the scanners I use. Everyone on that list is capable of receiving the Civil Air Band

(108-136 MHz). Most on my list can receive the MilAir freqs as well (225-400 MHz).

For a base scanner my favorite is the BC 780XLT, covers both MilAir and civil air. If you're looking for a handheld the PRO-94 does great for Civil air but lacks MilAir band.

I think it's kinda funny how much people clamor to modify their
scanners to hear cell phones. Back in the day when I still had my old
scanner that could pick them up, I never, ever, heard anything
interesting.

Perhaps it's just the "forbidden fruit" aspect of hearing them that
draws people?

Not to mention that about 80% of cell phones are now digital. Anyone who is a frequent user of a cell phone is
going to be using a new digital phone.

we were part of Fujitsu/ICL and there engineers kept saying 95 is the best.

i had 8 pcs in my area,all capable of differant things,all set up in
differant ways,what you could do on one,you could not on another,the
shipping software we was using was designed in 1989 and regularly crashed.

never mind,not my problem any more

well. you must be on flat land. here in the rockies. I hear still alot of traffic on analog. due to the fact of all the fringe area's. Here. you are 1 second on digital. 1 foot over. analog, then one foot over you are on digital again. almost every analog channel. besides the CDPD ones are used all the time here. the odd day like sunday. but. it is boring. and since it isn't illegal here. Makes it more boring. Much better to hear people you know. Then atleast you know if they dispise you and are plotting things on you.

Yes, a CB antenna will work fine, especially with low-band stuff. However,
it may not work as well for the UHF & 800 MHZ stuff.

> listening, if mounted on my rooftop?

I wouldn't see why not. The FM broadcast band is just above the aero band,
so you won't have to worry much about tuning the antenna.

However, if you're into building antennas, you can build one for next to
nothing.

In some places you need it if you really want to know what the cops
are up to. Where I live most of the the cops carry cell phones and use
them a lot and many of them are analog. Many of the conversations are
of the type that would otherwise only be conducted face to face,
including ass chewings, politically incorrect ethnic references,
potentially libelous suspicions, etc. They mistakenly seem to think
that it is more private than the encrypted digital mode that is
available on most of their car radios.

Brad,

If you hook your BC-895 to a computer and use WinScan 895, you can do both conventional and trunking at the same time. I use it and it works great. WinScan is about $60....

Good luck,

Jim

Sure you can use it mobile. Radio Shack used to sell a mount for it that wrapped around it and was made of metal with a rubber liner. Best you can do without it is just put it into a box and mount the box. I keep mine in a box in the passinger seat, attached to the back of the seat with string so it won't fly down and break when I stop suddenly. The wire for a 12 volt unit like this is about $4 at Radio Shack. No voltage adapter is needed. And the antenna could be a magnetic mount from Radio Shack, or you could get about a 30 inch whip from a local radio installer company, or buy an antenna from one of the internet sites that sell scanner antennas.

all depends if your emergency teams are digital or trunked or still our
normal analog. Some fire, police, ems are. Should give some info on what
town you are in or close to. someone should be able to help you.

Source record: 46896

Hello!

Im located in Monmouth County, NJ
Im getting on 160.9050 MHz Unknown Police Dispatch; but it sounds like New York City

Any info on this?

PS: I'm new at this so bear with me. I got a used Radio Shack PRO-2035. Great little unit, and was looking to get a nice indoor antenna. Tried a few, then bought CCrane 'Coaxial Scanner Antenna' today. 15 feet of coax on a BNC connector; then the coax splits into two different length sections; which you pin to a wall. Anyway, my reception distance/clarity seems to have doubled. Impressive.
PPS: Im clueless on getting AM Radio [770 AM, WABC New York, for example]; on the Proscan.

Ebay has some very small, 2.4GHz directional antennas on a regular basis.

Isn't it weird that probably some of the biggest household noise generators are plonked right in the middle of the "modern" shack. Some even have a few different noise generators, just for good measure.

I'm talking about PC CPU's, PC CRT monitors, TV's, electric heaters, etc.

When I started SWL 22 years ago, there were no home PC's and TV's were not to common either (not one in every room, anyway).

When I got back into SWL 8 months ago, I started in my garage with no noise, then moved to my study with lots of noise from CPU/CRT.

Since then, I've made my receivers portable (with external battery and easily deployed antenna) and I hear loads more. In the garden, in the garage, in the spare room, in my car up the mountain or at the beach. It's a whole new world.

Break away from your PC's and explore! (carry your WRTH or a notepad for ID's on RLDB later)

Todd

If done correctly PC's and Scanners/SWL Receivers can live together with no noise. My shack photo (http://www.milaircomms.com/shack.html) only shows one PC, however on the other side of the same room there are 3 other PC's. All are connected together via a network and a Hub (from what I"m told Hubs are very noisy RFI generators).

I have yet to have any Computer generated RFI problems. I think the big thing is to get the antennas outside and use well shielded Coax. I do have a Discone in the attic (right above the shack) and it does pickup some very minor RFI however the rest of the 10 scanners and 4 HF rigs don't.

From: Walt Bertram <wbertram@optonline.net>
Message-ID: <3D134933.C4F60BAC@optonline.net>
Source record: 46803

The frequencies in the range of 160.215 to 161.565 MHz are assigned to railroads. 160.905 is Railroad Channel 53.

The 2002 Police Call lists that frequency as being used by the NYC Transit Police.

I also have an X10 steup for sale. This package has three camera's, 1 receiver, 1 battery pack, 3 modules for remote operation and many extra's. I paid over $300 from X10 at the time. In my apartment complex the distance I needed the signal to travel was to far so now I have all this equipment sitting. Will sell for $150 and you pay shipping from Wisconsin. email me at prc2u@aol.com and please be patient for a response.

Hey, I was certified dyslexic at age 11 and it shows in some posts where
the spell checker doesn't rescue me, but it's still no excuse for bad
punctuation or actually not bothering to use a spell checker.
Punctuation has a purpose, it makes things easier to read. Whilst
criticising bad punctuation is ignorant, failing to use punctuation *at
all* is just laziness!

whats wrong with laziness its my right to write how i want,i do not have any problems like that,what i meant is thatyou have no right to critiscize people for spelling or punctuation.

net nazi i think that applies to you and the guy who critisized my spelling and punctuation.

i dont believe in being tied down by coventional language,thats in the past get real we are in a new world nowi am in a hurry i dont have time to waste adding in ll the crap i do from time to time but as long as youn can rea it and of course you canif not it dos notr say much dfor you,my stuck keyboard is a pain in the arse but again you can read it so whats the problem????

The only software I'm aware of is a program called "Windows Cloning Software" by RT Systems, Inc. out of Kennesaw, GA. I wouldn't call it good, just fair. The main problem I have is when loading frequencies into the software program, only one bank can be bulk loaded from an outside file. Any more banks have to be loaded one-channel-at-a-time. However, the price was right...free, and it's easier to hand enter each freq on my PC rather than entering using those tiny keys on the receiver. Those outside files of frequencies can be obtained through the Icom website.

Hi there. I may be on the brink of buying one of these and I just have a few questions. For one, what is the equivalent Bearcat model #? There usually is one as I recall. Two, is it a decent unit? Three, can it be interfaced with a computer? And can it imultaneously track a trunked and non-trunked system at the same time? Can it scan two different trunked systems at the same time? Can it store more than one trunked system at a time so I can use it for listening to, say, local cops and then cops on a trunked system in some other city without having to reprogram it?

Oh yeah, what did these sell for new?

Thanks.

Jeff

Please post a response here but also e mail one to me at swordfish@grandecom.net. I may not ghet to check back here soon and my server is iffy about getting my posts delivered to it's own NGs.

Yes, all 10 banks can be used to store trunked systems.

> Oh yeah, what did these sell for new?

$299.99 in the 1999 Radio Shack catalog.

There are two versions of the PRO-90. Catalog number 20-520A added an
attenuator and tone disconnect detector disable.

I have a mint 20-520A with extra battery pack that I'd consider selling.
Post back here if you are interested.

Source record: 46829

I checked that model, and it's a directional antenna, which means that you'll get a good signal
in the direction you point it at the expense of whatever's in some other direction. You need an
'omnidirectional' antenna, and RS is selling what you're looking for at the same price. It may not
pick up many things 120 miles away, but it's what you'd need for general scanning and will greatly improve your reception. The catalog # is 20-176. Take a look at it on the RS website.

You WILL get quite a range of distance on aircraft frequencies, if the aircraft is at high altitude, but generally a directional antenna has more gain (but only in the one direction) than
an omni antenna. You could use it with a rotor, but you're complicating matters going that route.

I live north of NYC, and with a roof antenna, I can hear aircraft talking to various Centers - Boston,
NY, Washington, and even Cleveland. The higher the altitude, the further the signal will travel - it's line
of sight. You won't hear the ground transmissions for very far, though.

Use good coax, like RG-6QS (quad-shield), also available at RS, and you should do very well with
the omni. And get a roll of 'Coax-Seal' (again at RS), to protect the connections from the weather,
so you don't have a problem with the coax degrading from moisture.

Two questions:

Does Portland have the only trunked local government system in the state?

Does Nextel or any independent SMR operate in or near the Farmington area?

I've noticed that Nextel has nine transmitters in Portland, one of which appears to have once been licensed to an independent SMR.

I'm spending the last full week of July in Farmington. Flying from Louisville, KY to Manchester, NH and driving from there, going through the Portland area on the way.

Message-ID: <5306-3D150F84-23@storefull-2394.public.lawson.webtv.net>
Source record: 46747

I don't have a 2002 Radio Shack catalog, but every single one of the base & hand-held scanners in their 2001 catalog covered the 118-136 MHz aircraft band. The 225-400 MHz aircraft band was eliminated from their equipment in the late 1990's, however.

Aircraft two-way radio communications is all that I've listened to since 1975 and I've owned many good Radio Shack scanners over the years. Scanner World & Grove both sell excellent equipment also, but if you decide to purchase something from Radio Shack, you don't have to wait a minimum of 2-3 days to receive it. The biggest decision depends on how much you're willing to spend.

Listening to aircraft communications isn't limited to just the vicinity of an airport. On a Monday-Friday basis, 800+ airline flights & freighters plus another 150+ business jets & military aircraft are heard within a 250 mile radius of me in the ARTCC high sectors above 24,000 feet each day. Being able to track airline flights at one or more websites adds to the enjoyment of the hobby for me.

4625. What trunking system used in my area? (San Marcos, Texas)

Newsgroup: rec.radio.scanner
Date: 2002-06-22 23:09:31 UTC
From: jeff <equinox@thegame.com>
Message-ID: <2206200218093111131%equinox@thegame.com>
Source record: 46840

I live in Hays county, town of San Marcos, Texas. I know for certain that the cops in my area are on a trunked system that is part of the LCRA (Lower Colorado River Authority) radio system, while most other San Marcos municipal radio usuing agencies (fire, ambulance, etc.) are not. Thus, what kind of system the LCRA uses (EDACS, Motorola??) makes all the difference in the world as to what kind of scanner I'll have to buy. I'd rather not invest heavily in a new frequency guide or onlline freq service until I know if I'll even be using a scanner in this area. So could someone please look in their "police call" book or wherever they may have such info and let me know if they use GE/EDACS or Motorola?

I do not need the actual frequiencies or other data.

Thanks, any help appreciated.

Jeff

Hi,
im using a realistic pro-25 scanner which has served me well for a few years.... that is until I plugged it into my car cigarette lighter socket (using the correct voltage adaptor). I turned the car engine over and the screen went blank.

Now when i plug it into its normal power supply, or run it from batteries the screen does the same thing - it goes blank, theres no sound but it makes a click when i turn it off.
The only way I found to make it work is to run it from a very well regulated +5v supply.

Im guessing that the voltage regulator IC has gone, but I need some schematics so that I can do some testing. I'd assume that all of the power supply parts of the circuit would be the same in most realistic scanners, so if anyone has anything that could help us out would you mind sendnig it to us?
Or even if someone has had similar problems please get back to me..

Thanks

Whichever scanner you end up buying, look into obtaing a good headset
to use with it. You will need a "sound attenuating" headset - not the
regular type you would use in the home. It is well worth the
investment! I use mine at Nascar races. It blocks out the car noises
so I can hear the radio communications nice and clear.

well. you must be on flat land. here in the rockies. I hear still alot
of traffic on analog. due to the fact of all the fringe area's. Here.
you are 1 second on digital. 1 foot over. analog, then one foot over you
are on digital again. almost every analog channel. besides the CDPD ones
are used all the time here. the odd day like sunday. but. it is boring.
and since it isn't illegal here. Makes it more boring. Much better to
hear people you know. Then atleast you know if they dispise you and are
plotting things on you.

I tried it once with the 2006 ... B O R I N G.
I'm sure there are people who get off on eavesdropping a private call.
I'd call them "twisted".
Not to mention that about 80% of cell phones are now digital. Anyone who
is a frequent user of a cell phone is
going to be using a new digital phone.

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

Some that I have found for Hayman and Snaking fire and others:

FS:
168.725
168.625
168.600
166.675

Unknown org, possibly FS:
171.120
172.375

Air to air:
126.025
125.025
124.660
123.720
122.920
127.725

And a whole host of local fire/police depts in the 151 to 159 range
depending on the local area.

If it was un-blocked from the factory, or if it is capable of being un-blocked, but has not been modified, then it would be perfectly legal to sell to anyone in the U.S.

If it is capable of being un-blocked, and has been modified to receive Cellular telephones, then it "might" be a problem. The current laws say it is illegal to un-block a scanner. So if you're selling one that is un-blocked, and someone wanted to make an issue of it, they might be able to cause you some greif. But I think it would be very unlikely.

HI all
I would like to know what you think about limited police communications being allowed to be monitored legally.

This group is set up to discuss weather it would be a good idea for limited police transmissions to be openly monitored.

E.G. A car is stolen, an obviations call goes out... would it not be better for a couple of hundred truckers on the roads to look out for it rather than ten or so police patrols ???

So not to clog up this group or annoy any un interested party's I have set up a group at http://groups.yahoo.com/group/policecoms/ for the sole purpose of this discussion.

RICK

4649. Re: Cheap Air-band antenna?

Newsgroup: rec.radio.scanner
Date: 2002-06-23 16:57:28 UTC
From: Network Dude <netdude@adelphia.net>
Message-ID: <Y5nR8.1925$wD6.856231@news3.news.adelphia.net>
Source record: 46765

FM Broadcast ~88-108mhz is BELOW the aircraft band of 110-137mhz. Phone (voice) communications in the aircraft band is between 118-136mhz 110-118 is for navigation.
Also, the aircraft band uses AM, so the FM amplifier most likely won't help.

The radio shack discone (20-043) is a wideband antenna that does pretty good in the aircraft band.

Looks very simular to the AntennaWarehouse's Scantenna for $37.00. Waht
is special about the 5094?

I would rather be paying for the increased police effectiveness of
maintaining stealth and the advantage of surprise. Why risk tipping off the
crooks?

For example, if I was being held hostage/kidnap for ransom I would not want
my captors to be able to monitor Police or SWAT commo adn put a gun tomy
head as SWAT was about to execute an entry.

Another example is consensually monitored (wired), undercover ops. In many
situations it would be very dangerous for the undercover agent if bad guys
to be able to monitor undercover ops.

Those are not "routine" communications.

Referring to a black neighborhood as "gorillas in the mist" was a
routine communication.

Cops cannot operate in a vacuum.

I don't know about the US but a case a few years ago in Canada got Burnaby Radio Commutations in hot water. They were selling un-blocked Ham transceivers to the fishing boats. After 2 were found on the police band the store got nailed with a $500.00 fine but is still in operation they will tell you how to un-block the radio yourself and let you do it. They also sell 11 meter amps and un-blocked scanners, (un-blocked scanners are not illegal in Canada).

A case in Vancouver BC Canada a few years ago led to cops getting killed because of a scanner in the wrong hands. The tactical teem was about to force entry and when they did they were shot in the heads. The bad guy knew when they were coming in and ware. He also knew that they were using body armor so he did head shots and took a few out. He was listening on the scanner. Take a look at the movie The Fast and the Furious and see what a scanner can be used for in street racing. There is also the chance of vigilantism and the trucker or someone listening may try to stop the bad guy themselves and put their life or other innocent lives in danger. If the police want to tell us they can phone the radio station and put out a broadcast that way. I have seen cases of shootings and home invasions ware the news media listening on a scanner arrive before the police and pull up in front of the house to get the best view. Look at what happened in Waco Texas with the media tipping off the people in the compound. Many car thieves here use scanners to rip off cars and out maneuver police by knowing ware the cops are setting up road blocks or if a neighbor has seen them. I use to use my scanner when I drove Taxi to shoot around police road blocks and it works very well. Time for me to get off my soap box now. Happy Scanning

in the UK police do not use roadblocks.

anything we use can be used by someone for criminal purposes.

why not ban hammers,someone may attack someone one day,or cars armed robbers use them to get away from the police.

but at the end of the day the situation in the UK will not change apart form the digital and secure Tetra.

scanning has been generally tolerated by the authorities for everal years now,most prosecutions have involved the scanner operator being involved in some other crime.

many police controllers have in fact been helped by scanner operators phoning in and helping and that is the right way to do it,no need for groups do go around doing it,just if you hear a report and you are in a position to help with location of an offender then do it,you do not have to say how you know what has happened or indeed give your details

UNIDEN BC 147XLT

Last time.....ANYONE have a schematic or more preferably, the repair manual I can obtain a copy of? I've got a problem with one here. Need to try to get it repaired by this coming weekend or at least know that the info is available so I can stretch it a week.

IF you have said information in your midst, please e-mail me direct. Thanks!

Lou/Tech@DP.NET

The only point I get is that SWAT should use a scrambler.

I would be interested if getting feedback from people local to these areas,
as to the extent -freq bandwidth, power, modes affected; ie GPS 2M, police
freqs, or just cellphones.
If the emergency / public services freqs are affected and the jamming
contributed to an "event", who would be sued by the affected parties?

4666. Scanning While Camping

Newsgroup: rec.radio.scanner
Date: 2002-06-24 01:24:04 UTC
From: DP <jettaway21@hotmail.com>
Message-ID: <UwuR8.29034$Z6.337710@nnrp1.uunet.ca>
Source record: 46781

Hi Folks,

I have an antenna question for the experts.

My wife and I do a lot camping in our pop-up trailer (hard top tent trailer) and I always bring along my Icom R2 to pass the time. It still has the stock ducky antenna and it works quite well for the most part. I have been tossing around the idea of buying a base antenna (such as a discone) and setting it up on the roof of my camper when I arrive at the campground. Most of my scanning is in the aero frequencies and some of the trunked 800mHz frequencies, but a general purpose antenna would be best.

I have never owned a base antenna and was wondering if it is feasible to transport/setup/takedown these types of antennas? They look quite fragile.

Any advise would be greatly appreciated. Thanks

Darryl

Just strip back about 25 inchs of CO-AX cable and leave to outer brad hanging down to make a Di pole. Then pull this up into a tree with string. Or get a plastic PVC pipe about 10 to 20 feet or wooden pole as a mast to hold up the CO-AX if your camping on flat, open country with out trees nearby. The R-2 will work ALL BANDS! You can do the same with the discone, and the mast lashed to the side of your camper.
Jim

'Weather' ???? Do you mean 'whether' ?

And you have it spelled the same wrong way on the Yahoo site! What do we
have nowadays? A bunch of illiterates?

WHAT the heck is an 'obviations' call????? I gotta give you some credit for
consistency though, since you have the same thing on the web site..

I don't know if you guys are interested, but, if you want to have a quick listen to some police audio from Australia, we have some on our site.

The recordings are from Newcastle, New South Wales. They can be found at http://newcastlescan.tripod.com

just click on the "soundbytes" links to take you to the area

Garry

Our tac teams here have currently UHF radios on scrambled frequencies.
When we switch to 800 trunk in a few months, they will not only have
scrambled frequencies, they will be digitally encrypted. Otherwise, the
normal day to day patrol talk groups are open to anyone who has a trunking
scanner, and the ID codes to block out the dog catcher, and the electric dept
LOL

Hi all,

Just a reminder that the auction for my last PRO-2006 ends in just under
24 hours from now. I'm offering a warranty on this one since it's in such
nice shape. See the auction for details at:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1360940145

thanks!

You might want to pop the cover off and check to see that the ribbon
connectors are attached to the screen ok

Jim,

Many thanks for the suggestion on the antenna (the price looks great as well ;-).

If you don't mind, I have a couple of questions about this antenna. How did you come up with the 25" ? Is that length optimized for 800 mHz or ~125 mHz? Also, I was telling a friend about this and he suggested connecting a disk (coffee can bottom, or similar) to the braid. Do you have any thoughts on this?

Thanks again.

Darryl

[This followup was posted to rec.radio.scanner and a copy was sent to
the cited author.]

Hey Greg,

I use an AOR 8200 MKII handheld which is on a custom gooseneck stalk mount and hard-wired into the car. I also use a RS amplified speaker. The setup works great. I sometimes swap it out for my Yupi MVT-900 which has cell capability, depending on my mood.

The Yupi is much less suceptible to alternator whine (dead quiet, actually), while the AOR is more compact and somewhat easier to use in this application.

Also, I can drive the AOR with an Opto Scout, mounted right alongside.

Don't do this!!!!!! I did this when mine had the same problem, and it voided the warranty! I was told by a Uniden dealer that it was OK to open the case and check things out; he was wrong!. When I sent my unit back for repair (it wasn't the cables), they told me the unit had been "tampered with" and that I'd have to pay $56 to get it fixed.

I'd just send it to Uniden; just don't expect it back anytime soon (it took over a month and a half for me to get mine back).

> is special about the 5094?

The people that sell them don't lie about the performance like your
buddy at AntennaWarehouse. You can also ask the people that sell the
5094 questions about their claims and they will answer them, unlike
your buddy at AntennaWarehouse.

If you don't believe it, ask AntennaWarehouse which antennas they
tested their scanner beam against. They made the claim here and on
their WWW page but refuse to provide an answer. Their shill GeorgeF
says they told him the answer but he is sworn to secrecy and can't
reveal it. ROFLMAO!

So to answer your question George, everything is special and anything
is better.

To ensure operational security and officer safety the destinations and the whereabouts of law enforcement officers should never be openly broadcast.

Reminds me of when the Navy Seals landed on the beach at Somalia bathed in media floodlights.

We should forego our personal scanner entertainment in the interests of ensuring the security of operational data and the safety of others.

Police dispatch gives advance notice of police en-route and tips the bad guys to flee or to otherwise conceal their activities.

In the worst case scenarios when the bad guys are intent on armed confrontation, it provides the bad guys the info they need to set an ambush for the police.

Most police comms are routinely taped and archived for court evidence and for oversight purposes and review if/when questions arise.

Well, that's what I meant, but not what I wrote. That's what lack of sleep
does to you.

> Also, the aircraft band uses AM, so the FM amplifier most likely won't
help.

A preamplifier will amplify all signals, regardless of mode.

> The radio shack discone (20-043) is a wideband antenna that does pretty
good
> in the aircraft band.

I was unaware that the antenna the original poster was referring to is
directional, so just about any omnidirectional antenna will work better than
a directional antenna.

That's the main problem. If you don't use proper punctuation/capitalization
it makes it very hard for others to understand exactly what you are trying
to say. That's why punctuation and capitalization rules exist.

I don't mean to gyp you out of a sale, but you can build one of those for next to nothing. I built something similar (bicone antenna) out of a broom handle and wire coat hangers. Total cost around $4.00 ($3.00 for the broom handle, $1.00 for a can of spray paint). It and the plans can be seen at http://photos.yahoo.com/n2uhc.

Most of the time, these comms are carried on discrete frequencies. Our
department has a secret "Channel 16" for use by the SRT (Special Response
Team) that I haven't been able to find yet. And I work as a dispatcher
there.

This past weekend for field day I took along a 2 meter J-pole which I hoisted up into a tree by throwing a rope tied to a heavy fishing weight over a branch. This worked quite well.

Alternatively, you could get two 10' lengths of conduit, say one 1" diameter and the other 7/8" diameter, slide one into the other and use as a pushup pole. Drill two holes in the ends and bolt them together. You would need to find some way to anchor the bottom part of this mast, though. I've seen a mast anchor that someone made that was a mast welded to a flat metal plate. The metal plate was anchored by parking a vehicle on top of it.

Rick wrote:
>
> HI all
> I would like to know what you think about limited police communications
> being allowed to be monitored legally.

I don't know where you live, but here in Houston TX, police comms are legal to monitor. Even when mobile or pedestrian.
There are a few fairly unwritten rules though as enforced by HPD. #1, they don't want you EVER showing up at a "scene". IE: wrecks, crime scenes, etc. #2 They don't want you repeating what is said over other radios, etc. Actually, this rule is probably fcc related. I listen to the police all the time. Even my dual band hand held has all the PD channels in it. Same for my 706g. I also have a 800 mhz trunking radio that I want to rig up for police listenng. "Harris county", etc. The cops here could care less. Now, what will really get you in deep doo-doo around this town is being in possesion of a radio that can *transmit* on those frequencies. IE: motorola sabres, etc, etc. Now, it's not really illegal to have one of these, but HPD has had a problem with "squirrels" on the PD channels. If they catch you with a radio that can transmit, they will throw you in jail and ask questions later. I know a guy who was a police academy grad. He had car trouble and had to go to an auto parts store. While he was gone, the police showed up and checked out his disabled vehicle. They saw a motorola sabre radio on his seat. Now, he had never used it illegally, and also was a licensed ham, but they gave him hell, as they currently had a squirrel problem at that time. They threw him in jail. He eventually got out of it, but it was no fun at all. For this reason, I leave all my radios stock, and not "opened up". If you try to transmit with any of mine, they will error out, and not do a thing. The transmit light will not even come on. That could save my butt if I ever had a cop thinking I could talk on one. My 706 is quite capable , if it were opened up. It can even send the correct pl tones. Same for my HT. I leave all my radios stock just for this reason. Also, I don't want to have an accident, like listening to pd in my car, and sitting on the mike by accident. MK

Antenna Warehouse is no different from the guy offering it for bid. They are both grossly overpriced. Radio Shack had virtually the same antenna on closeout for something like $10.00 a couple, three months ago - and there may still be some around. Don't let AW fool you with any puffery about their having "tested" their model and "proved" that it has more gain. Ask them exactly what antennas they tested it against, when, where and how; and to identify exactly what they feel the additional gain actually is. If things run true to course, AW will refuse and Georgy-Porgy will claim that he knows, but is sworn to secrecy. Give me a break, George!

4701. NS Frequencies in Allentown, PA

Newsgroup: rec.radio.scanner
Date: 2002-06-24 20:25:53 UTC
From: William Carl Rooney <wrooney@andrew.cmu.edu>
Message-ID: <Pine.GSO.4.43L-024.0206241625230.11094-100000@unix6.andrew.cmu.edu>

All,

I am trying to find the NS frequencies used in the Allentown, PA
area.

I am particularly interested in
1) Frequency in the main NS Allentown Yard (along the Lehigh River)
2) Frequency of the small yard in Chapman (west end of
Allentown, This is the yard on the branch line that connects to the NS
main at Alburtis)
3) Mainline NS frequencies.

Cheers,
Bill

Source record: 46717

First, ask yourself why you need one.

1) Are you running more than a couple hundred feet of lossy cable?
(such as RG-58)

2) Is your antenna in a very rural/weak signal area?

3) Are you trying to improve reception on just one band?

If you can't answer yes to one of the three questions above, you don't need no steenkin' preamplifier.

If you do answer yes to one of those three questions, you need to consider how much gain you'll need, and whether it should be switchable.

You can't just put a pre-amplifier in front of a scanner and expect the signals to jump out of the noise. If it were that easy, all scanners would be a lot more sensitive. Too much signal from a pre-amp usually makes overall interference levels WORSE. The sad thing is that the problem typically isn't the pre-amp overloading; it's the scanner. The issue is one of dynamic range and it concerns a major technical trade-off of dynamic range versus sensitivity. If you don't understand that issue, I advise you to familiarize yourself with it before plunking down money on a black box that will probably make things worse.

In general, a pre-amplifier usually isn't worth the effort unless the receiver has a very selective front end (not the case with most scanners), the antenna is very directional (as in an eight element yagi), or you are forced to use small transmission line to the antenna for long distances.

The amount of gain you'll need from the pre-amplifier is another issue you'll need to consider. There is no magic "one size fits all" solution here.

Again, unless you know how much gain you need, and some idea of what noise figure you're trying to achieve, I wouldn't waste my money.

Ok, I have a 9 element Yagi cut for about 225-400 MHz. When mounted it will be about 30' high supplied with about 60 feed of RG-8/U. I want to get the most gain I can in the MilAir bank (225-400). What do you suggest for a pre-amp?

come to the UK most comms at the moment in the clear using the same freqs
use 15 years ago.

example President Bush comes on visit,SS guys nice and secure,only to have
our special branch and police helicopter giving out all movements on the
same channels

451.325 special branch
138.10625 for chopper

then using the motorola smartnet system as well with 5 special branch
protection talkgroups and 1 royalty protection all in the clear

does not matter whether UK or Foreign dignitaries same freqs used all the
time.

Yikes!

We've got one at work that I've taken apart a few times. Last summer,
the foam padding stuff with the sticky backing that's around the
plastic window was starting to slide down in front of the display. I
took it apart and fixed that.

Then a while back, I discovered a problem with the bnc connector for
the antenna - removed that and put in a new one.

(Employees have a habit of puting this thing in work vans and not
mounting it down any way, so it takes a heck of a beating - hence the
problems we've had with that unit)

It recently wouldnt power up, but I didnt feel like fixing it. Sent it
in, and they fixed it. Didn't say anything to us about it being
modified or opened up or anything.

Just search the rail band, 159.885 to 161.565 (15khz spacing, if you can select that) for a while, and it will be pretty obvious what is what. There's some UHF stuff too, but I hardly ever hear anything on it. I've never seen a freq list for rail freqs that really is accurate.

Jake,

I question whether your item 2) is a valid reason for using a preamp.
Unless the preamp has a lower noise figure than the scanner rf amp
(unlikely, since they most likely use the same class/type transistors),
or there is loss between the antenna and the scanner rf amp (possible),
a preamp isn't going to improve the signal to noise ratio. Much better
to get a better, higher gain antenna. Or, if you are marginally
line-of-sight, raise the antenna on a mast.

Walt

Secure comms in the US are often digital cell phones. Detectives and
narcs love 'em because they AREN'T recorded.

Hi all I appologize if I am violating your charter by posting this here. I hate to get rid of these but the wife is bugging me to clean out my storage. I have One old Tube type regency scanner. And a
great SBE Card Reader scanner. The SBE is rellay cool. They are both in working condition and the SBE has one card in the reader slot. If anyone is interested in these please drop me a line. I can answer all questions and can provide pics as well. Thanks

Steve

4719. Re: Scanning While Camping

The center wire is strung up into the tree or hung from atop a pole. The outer barb wire or braid is just hung loose
down below the antenna that is the center wire. Putting some weighed object on the braid may help to
keep the di-pole straight. If your can try to pull the stripped braid back down over the co-ax, this makes for
a neat looking antenna. As for 25 niches this more for VHF. If you want 800 Mhz go with 6 to 8 inches
there are formulas for cutting antennas for maximum performance the above is just off the cut specs.
For the past several seasons I've used a six (6) foot length of computer co-ax stripped back about 18 inches placed or
should I say shoved into the roof rafter of the lean-to where I'm camping. This is a slight improvement over the
rubber ducky on a RELM HS 200, for air band through UHF. Not much 800 Mhz in northern New England!
Down at the lake shore around dusk the BBC came in great on the ICOM R-2 using the stock antenna.

You can get frequency info for airports at www.airnav.com and Lat/Lon info
which is useful if you have a GPS.

you can see the charts at:
http://www.aeroplanner.com/

and you can see approach plates at:

http://www.aeroplanner.com/flightplanning/approachplates.cfm

have fun

I hope he sued the daylights out of them for false arrest or something
similer.

Besides cops are stupid. They busted a basketball star for DWI (just
because he ran a red light) and he wasn't drunk on the police tape
shown in court. Yep saw it on the news last night.

I don't like cops. Why? They never solved some crimes that happened to
me even though I reported them.

My truck stolen.
An apartment broken into.
I was even robbed at gunpoint with witnesses (they called the police)
and they never caught the robbers.

So Why The Fuck should I listen to them on a scanner?

>suggest for a pre-amp?

Nothing, yet. You don't have enough loss to overcome. Going through
100' of RG-8 amounts to maybe 6 dB of loss. Most preamplifiers have
much more gain than that. The extra gain would not help your
situation.

Incidentally, I've never heard of a "225 to 400 MHz Yagi." Assuming
the frequency range is correct, I suspect you're really talking about
a log-periodic antenna. They're not the same. A real nine element
yagi antenna would be more narrowband and it would have a much more
focussed beam. Log periodic antennas, though they do have gain, tend
to have more side lobes and thus may not be as good a candidate for
weak signal reception.

So the issue is really dynamic range. A preamplifier will often make
a mess of most scanners. Even high end scanners such as the ICOM
R-8500 can't do much better than 80 dB of dynamic range at 220 MHz.
Most higher end short-wave receivers, however, can manage 100 dB and
better. Take a look at the AOR 7030 for example. My source for this
comparison is the ARRL Product Review testing, Two tone third order
IMD dynamic range. This is why a preamplifier is so much more
commonly used on lower bands.

Please understand, I'm not trashing scanners in general. They have
their place in the world of wide band signal acquisition. However,
their wide coverage and bandwidth comes at a price: dynamic range. If
you're scanning specifically for certain types of signals and you're
willing to go the distance of erecting a narrow-beam antenna and
installing a pre-amplifier, then you really ought to reconsider what
receiver you're using.

My suggestion to those of you who really want weak signal reception
(biggest bang for buck items first)

1) Put your antenna up higher, as high as you can get it.

2) Use better coaxial cable. If you're using more than 100' of RG-58,
switch to RG-8X or RG-213.

3) Weatherproof your connectors and cable! Most signal loss problems are really the weathering of connectors.

4) Get a decent directional antenna. A log periodic antenna, set vertically polarized will work wonders.

And finally, if you've done steps 1 through 4 and you want to try a pre-amplifier, do it; but don't be surprised if it doesn't help much.

If you're really rabid about low noise reception at this point, I'd consider building a low noise down-converter at the antenna and then using a SW receiver. However, if you're going this far, you'd better have some pretty specific goals in mind, because you won't get good performance doing this AND keeping the system broad band.

If you'd like to see one company's preamplifier offerings, see
http://www.advancedreceiver.com/page21.html
I have no stake in the company except that I was a customer many years ago and I have no complaint regarding the quality of their products.

One final parting note: unless your feedline losses are around 10 dB or more, I doubt the preamplifiers will help more than they hurt.

Good Luck and Happy Listening!

I bought this from someone who makes them in his home. Here is the
picture/advertisement from which I purchased it from:
http://www.milaircomms.com/images/yagi1.jpg

The next two images I just took (5 minutes ago) of the actual antenna on
my "test pole", sorry for the crap pictures but its been cloudy today.
http://www.milaircomms.com/images/yagi2.jpg
http://www.milaircomms.com/images/yagi3.jpg

There are three driven elements, no reflectors. The length of the three
driven elements are 16 1/2", 15 1/4", and 14 7/16".

You tell me, more like a Yagi or more like a Log? I thought Logs were
all fed from the front (I have a log which is fed from the front, but
this ant is fed in the back.)

All three driven elements are connected together with the horizonal wire
as you can see in the photo.

It does VERY well for only being mounted 10' high right now. I want to
take measurements and reconstruct another one myself and put up on my 30

mast which has a rotor.

Thoughts??
George

I can't tell what the guy was thinking. It may have gain, it may not.
However, it's neither a Log Periodic nor a Yagi. The problem is that
a log periodic antenna requires that the phases shift 180 degrees
between elements. Your antenna has only the back three elements fed
in phase. A Yagi antenna has only one driven element. Yours has
three. I'm stumped.

I don't have any modeling software handy, so I really can't tell what
you have there or whether it's any good or not. I suspect that if you
are getting gain, that it probably isn't 18 dBi of gain and it may not
be all that broadbanded. But that's just a relatively uneducated
guess.

>It does VERY well for only being mounted 10' high right now. I want to
>take measurements and reconstruct another one myself and put up on my 30
>mast which has a rotor.

Higher will be better. If the antenna works for you, good. I suggest
looking at something a bit more, er, conventional...

Hi, I have a Pro92A version for sale
I just do not use it anymore since I got my 780
I have the leather case(from Radioshack)
"H" adaptaplug(no powerpack just plug) belt clip, battery cases
and 6 1600 MAh NIMHS
unit is in great shape and works fine
I cannot find the manual and box since I moved
I would like $150 Shipped for this radio
US ONLY
I have pictures up at these addresses
http://www.ameritech.net/users/tiny2nz/1600battp92.JPG
http://www.ameritech.net/users/tiny2nz/PR92disp.JPG
thanks for looking
I take CASH, money orders, or personal checks(wait to clear)
NO PAYPAL
thanks TiNy

This is an access database and does not require any form of
installation.
PLACE IN A FOLDER OR ON YOUR DESKTOP

As long as you have MS Access 2000 installed double click the file and
away you go.

I have downloaded and currently using it as a backup to my log book..

UPDATE WISH

In the next version perhaps a button to remove the example data for
inexperienced users would be a nice function...

I did this by going into Database design and removing unwanted data..

Other than that have found no faults or problems.

Run under Win XP pro, Win ME, Win98se

Best regards

Okay Karrl,
Got your suggestion for removing the sample data. I suppose I reckoned that those people who had Access2000 had enough working knowledge to know how to remove all records, but sure enough, there'll be some people who bought Office without ever having touched the "Access" portion of it.

Kind regards, Tom

ScannerBase XE is a pretty nifty frequency database, however now that I have XP it won't run. Is there an XP version?

Here's the web site...I didn't see a version for XP: www.csp-tech.com

Thanks,

Mike

4746. Siemens 4215 Gigaset 2.4 GHz Phone

Newsgroup: rec.radio.scanner
Date: 2002-06-26 02:35:58 UTC
From: 3518693@mail.com
Message-ID: <740cebc3.0206251835.6c21aaba@posting.google.com>
Source record: 46662

Question:

Does anyone know if this phone is true digital transmission? Is the actual transmission digitized, then spread spectrum, or some kind of 1/2 baked system like the old Panasonic phones, where they were digital one way, analog the other.

In short, if one were to break out their scanner and pop it up to 2.4ghz, could you hear the phone call, or sefments of it?

I am interested in buying one, but as a radio freak, know how easy it is to listen in to these things (no, I don't need the "it's illegal" lecture... I know... and its BORING too, but some people do it, and I want to know I am secure.)

Thanks

MW

Hi,

The Siemens web site says it's a 2.4 GHz full digital frequency hopping spread spectrum system.

I tuned my spectrum analyzer to 2.4 GHz and with my 4215 held next to the input I saw the frequency hopping spread spectrum pattern. Zero spanning on one of the frequencies showed a pulse (digital) modulation waveform. I don't have a scanner that goes up to 2.4 GHz, but I would assume that one would hear nothing intelligible.

Regards,
Stan

What is the best handheld scanner?
ICOM IC-R10 or YAESU VR-500, without considering the king of the hand scanners the AOR AR8200 (but with the problems of short autonomy of his batteries and his expensive price).

I want to scanner all mode (AM, N/FM, SSB & CW), handheld, that cover frequencies between 0,5 MHz and 1300 MHz minimum, and that has a good selectivity and sensitivity, these two models that I expose are the firm candidates, and only models that sell where I live (I do not want to buy at distance, by the problems of repairs while this in guarantee, either to buy used scanners, unless one says to me that the ICOM IC-R10 and the YAESU VR-500 aren't a good election).

Thanks,

Trondheim

I don't know much about scanners but this got
crossposted to a group I read and I'm perplexed.

If I set up a scanner to scan from 0.5 Mhz upwards
stopping on each AM, FM, SSB and CW signal for long
enough for me to decide if I am interested or not....

On what date does it reach 1300MHz?

> Does anyone know?

The difference between normal scan and turbo scan on Uniden scanners is that under normal scan, the scanner will scan each channel sequentially, i.e. Channels 1, 2, 3, 4, etc. In turbo scan, the scanner scans each channel by frequency, picking the lowest frequency in each bank and scanning upwards to the highest programmed freq in each bank, then moving to the next bank and doing the same thing. Scanning by frequency must save a lot of time in the processor, giving a much faster scan rate.

I had noticed that frequency scanning, however I never knew that was the
reason for it. I noticed it in my BC895... Always wondered about that...

Thanks for the info!

We have audio recordings of a situation that unfolded in our region yesterday.

A Police officer was shot and a high speed pursuit followed which ended in a siege with more shots being fired at and by police.

The police officer is in hospital and the offender is now deceased.

Having owned the aor 8000, 8200, yupi 9000 and the alinco dj-x2000 I
give the nudge to the alinco. the radio has many usefull features
that are not included or cost extra on the other radios. Having built
in record function for 2.5 minutes if useful, speech descrambler, ctss
decode, 2000 channels, exellent bank breakdown (40 channels per),
excellent construction, computer control, the list goes on. Only weak
spot is scan sped is slow but this is remedied by grouping
frequencies ie, 450 mhz in one bank, 150 in another, etc... or at
least keep them consecutive within the same bank. The scanner slows
when moving from one frequency range to another. Keith

Sure. You have a "Log Periodic Scanner Antenna" from AntennaWarehouse, the place you constantly shill. Now your buddy Tim at AntennaWarehouse claims in his ad that his "Log Periodic Scanner Antenna" "...have higher performance in the...225-400 MHz. Military Aircraft and Satellite band...than any other antenna we have tested in it's price class, and rival the performance of logs costing many times their price." I recall he posted on here he spent a summer testing this antenna. He to this day refuses to disclose the antennas he tested against but what do you expect from such a fraud?

Why the hell would you waste your money on anything else George? According to AntennaWarehouse you have the best already. Why look any further?

Even funnier is you talking about building an antenna. You all but filled your drawers when I suggested you drill 2 holes in a TV antenna to change polarization to vertical. Remember that George? I think you said you were incapable of drilling holes to turn a $15 TV antenna

into a AntennaWarehouse ""Log Periodic Scanner Antenna" " clone. You are a real funny guy George.

On the subject of directional antennas. I have a military surplus AS-1405 antenna that is a 225-400mhz beam antenna made for the PRC-41 radio. I use it mainly for monitoring the UHFSATCOM stuff in the 260mhz region, but it is also fantastic for monitoring the 225-400 military airband. They sell for $90 at Murphy's Surplus in California. Back to the pre-amp subject.... for my Satcom stuff I am forced to use a 30db 240-270 pre-amp, but for my other monitoring I just use good coax and if I am on a 100foot or longer run I use the litle inline Radio Shack 10db pre-amp. On the average, I get better results without the pre-amp and only use it when I have a specific frequency I am keeping an eye on.

> scanners the AOR AR8200 (but with the problems of short autonomy of his
> batteries and his expensive price).

If you use it for Ham use, the IC-R10 IMHO. Why?

After all, the 8200 has a far better SSB filter (the R10 & VR500 use their 6kHz AM filters for SSB so they're not that good on a busy band).

So as the 8200 has a half decent SSB filter (still not that good), why do I prefer the R10? One reason. The tuning control.

The 8200 has a useless tuning mechanism with a thumbwheel rather than a proper tuning knob. Not having a tuning knob in the conventional sense renders this radio useless for Ham use. Somebody better tell AOR that you need a tuning knob on a radio.

The IC-R10 & 8200 come with rechargeables and recharger in the UK but the VR-500 doesn't.

The computer interface on the R10 utilises the standard ICOM CIV interface so not only is it fully featured but there's lots of software that will work for it.

The 8200 has a fairly good computer interface too.

The VR500's computer interface is only there for cloning and programming the memories. No 'real time' mode like the 8200 & R10 have.

The VR500 is smaller than the R10 which is, in turn, smaller than the 8200.

The user interface of both the 8200 and the VR500 leave me very confused.

The 8200 has a better stock antenna as it is a telescopic whip. The other two have rubber ducks. The 8200 also comes with a small ferrite coil antenna which, unless you already have a decent antenna, is essential if you want to have chance at picking up anything below about 14MHz.

I noticed lots of internally generated microcontroller hash on the 8200 (mark 2 version) I've owned.

Compared to other vendors, AOR should be congratulated on their web product support for all their products.

At one time or another over the past three years I've used all these radios fairly intensively. I purchased the R10 first. And it's still the R10 that I prefer, and is the only one I still own and use regularly.

Tom, I was looking at your *projects* on your site and I have a question.

I have a 4:1 balun that I had at one time used with the thinking of
transmitting on it (which I never did) as well as receiving.

I have approx 200 ft. of wire outside, would it help at all in the receiving
part, and if so......how?

Would it serve any purpose to hook up that balun at the end of the wire by the
receiver like you did on your "bicone"? :-)

Sure, the FCCs search site(s) at either:
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts
or
http://svartifoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts
or
http://svartifoss2.fcc.gov/reports/index.cfm
or
http://gullfoss2.fcc.gov/reports/index.cfm

Best choice for that kind of search would be to choose either the
"State/County/Frequency" search or the "Frequency/State" search.
Choose and/or fill in the State (and county) and frequency. When the
return comes back, click on the "ULS DATABASE" ... it may take a while
to return, especially if it's a popular frequency, so give it time.

You "think" wrong. I did not say that I was incapable of drilling holes to turn a $15.00 TV antenna into a scanner antenna. If you will pull up the posts from that "go-around" you'll see that I told you that $15.00 TV antennas do not exist in our local stores including Home Depot as you suggested.

You will also note that AntennaWarehouse stated "higher performance than any other antenna we have tested in it's price class". Key word Glenn is Price Class. They never said it was the best antenna period.

I do own an AntennaWarehouse Scanner Beam and am very happy with mine. It is the best commerically available antenna I have yet to own. However as with most people we look to improve what we have, not put down what we don't......

George Phillips of Meridian, Mississippi was going up to bed when his wife told him that he'd left the light on in the garden shed, which she could see from the bedroom window.
George opened the back door to go turn off the light but saw that there were people in the shed stealing things. He phoned the police, who asked "Is someone in your house?" and he said no.
Then they said that all patrols were busy, and that he should simply lock his door and an officer would be along when available. George said "Okay," hung up, counted to 30, and phoned the police again. "Hello. I just called you a few seconds ago because there were people in my shed. Well, you don't have to worry about them now cause I've just shot them all." Then he hung up.

Within five minutes three police cars, an Armed Response unit, and an ambulance showed up at the Phillips residence.
Of course, the police caught the burglars red-handed. One of the policemen said to George: "I thought you said that you'd shot them!"
George said, "I thought you said there was nobody available

The only fairly easy way to program any of the keyless scanners is to program them by computer. Buy the programming cable and the software is a free download from Alinco. With the X3 you need to do a lot of dial spinning to get to the frequency and then enter it into memory. The easiest way to set up your banks is by frequency rather than by service.

Hi can someone explain what trunk codes are and how to use them? Here is an example:

I want to hear the scpd 4th precinct dispatch. There is no exact 800mhz code for this but there is a "fleet id". (54576) When I enter this into the scanner it says error. (i guess its not a frequency) How do I listen to this?
Please let me know, Thanks
Chris

receiving
> part, and if so......how?

A 9:1 balun is best for a wire for receiving, as it tends to be low-noise. It will help with matching impedances, but I have used a wire attached directly to the center conductor of the coax without any problems. I think it does work better with the balun attached.

> Would it serve any purpose to hook up that balun at the end of the wire by
the
> receiver like you did on your "bicone"? :-)

I didn't hook up a balun to the bicone, just a random wire. The balun was a 1:1 balun I had laying around. If I had one, I would have used a 9:1 balun on the random wire. But the bicone antenna is attached to both sides of the coax.

Do you have a "trunk tracking" capable scanner?

The manual will tell you this.

And should provide instructions for entering the System Type (Motorola,
EDACs), the frequencies, and the ID codes.

Oh, and ordering one on the Internet wouldn't work either. (wink wink
grin). I get it George.

> You will also note that AntennaWarehouse stated "higher performance than
> any other antenna we have tested in it's price class". Key word Glenn
> is Price Class. They never said it was the best antenna period.

That's not what they said George. This is where you get deceptive like
Tim at AntennaWarehouse. It makes you look slimey and dishonest
George. The rest of the sentence you clipped is "and rival the
performance of logs costing many times their price." Which logs are
those that it rivals George? What is your definition of "rivals"
George? How do you interpret Tim's claim of "and rival the
performance of logs costing many times their price."? Is he saying
his isn't near as good? No. Is he giving the impression his is
inferior to logs costing many times their price George? I don't think
so. Is he trying to say he and his scanner beam is in the same league
as "logs costing many times their price."? Please George, clear this
up.

> I do own an AntennaWarehouse Scanner Beam and am very happy with mine.
> It is the best commerically available antenna I have yet to own.
> However as with most people we look to improve what we have, not put
> down what we don't......

What have I put down other than your's and AntennaWarehouse's
dishonesty. I have a KMA antenna and I have used TV antenna converted
to vertical (that is what you are using and Tim sells). The TV antenna
does not rival it, at all.

George you are a bold faced liar and are attacking me to cover your
part in perpetuating a lie. On YOUR web site YOU claim in YOUR product
review and I quote:

"Create antennas are well over $400.00 and KLM's over $300.00 for the
same frequency coverage"

Not true George. Is this scanner beam resonant on 6 meters? Nope. A
log periodic that claims to "have higher performance in the 30-50 MHz.

VHF low band....than any other antenna we have tested in it's price class, and rival the performance of logs costing many times their price." would be resonant on 6 meters.

4796. REQ: El Cajon fire frequencies

Hi

I have an ICOM IC-R2 scanner and I want to ask if I connect a TNC to my scanner, is it possible to receive digital data such as APRS SSTV RTTY? If yes, which TNC I sould buy?

Thanks

I fail to see the point in spamming an auction "4 hours left" message
all over when Usenet message distribution is quite low priority and
can take in excess of a day to be distributed...

By the time many of us read the post it was already too late... (not
that I would EVER buy anything from a spammer anyways).

Define "rival". Rival doesn't necessory mean beat, it simply means

"close" which if you believe Grove's dB rating for the antenna it does.

Grove is claiming the antenna as a Max dBi of 12 dBi. When I was

looking at Create and KMA the Create claims a Max dBi of 13 dBi and

KMA claims 8 dBi gain. Now I would say that by looking at the Gain number that the Scanner Beam does rival Create and KMA in terms of gain. The above numbers are what is CURRENTLY advertised on Grove's and KMA's website.

>
> What have I put down other than your's and AntennaWarehouse's
> dishonesty. I have a KMA antenna and I have used TV antenna converted
> to vertical (that is what you are using and Tim sells). The TV antenna
> does not rival it, at all.

Do you mean that GROVE is liar???? HE advertised a max gain of 12 dBi for the ScannerBeam (converted TV Antenna so you say). He also advertised a max gain of only 13 dBi for the Create Log! only 1 dBi difference however the Create is many times more money.

Yep, I guess the cats out of the bank, Grove advertises a max gain of 12 dBi and on Groves page he advertises the Create as only having a max of 13 dBi. Now if you call AntennaWarehouse a liar you must also call Grove a liar as they both said the same thing just in different ways.

you can hook into a TNC to decode APRS or packet. slow scan and pretty much
any mode.

i have connected my vr-120 and other scanners to my kpc-3 with no problems.
just make sure you start with volume off and work your way up, so you dont
blow the tnc.

it might be easier to use your computer sound card to decode signals by
using one of the many programs found on the web

I guess I just got it confused in my head about the CIVILIAN BAND and the
MILITARY band.
I believe I've seen freq list, with freq's for LOGAN in the 300mhz range,
this is why I thought that my scanners didn't pick up all the AIR BAND.

Clarification made, as the saying goes: Light dawn's on marble---head!

I would like to get a scanner that covers BOTH civvie and military band's,
any recommendations???

The above top posted comment has lost me!

If you want to receive SSTV sent using SSB on a receiver without a BFO
or SSB setting then you are on a looser TNC or not.

On VHF SSTV is transmitted using FM mainly with most activity in the UK
being on 144.5000 MHz

Yes George , that is what I said above. Close or in the same league.
That is a lie George. You can keep trying to defend Antennawarehouse's
deception by pointing at Grove but it proves nothing other than you
can't defend your own review on your web site.

> which if you believe Grove's dB rating for the antenna it does.
>

We aren't talking Grove George, we are talking Antennawarehouse. Are
you now admitting that Antennawarehouse is claiming to compare their
beam to Create and KMA or KLM's?

> >
> > What have I put down other than your's and AntennaWarehouse's

So if you constantly say Grove is a liar that makes Antennawarehouse
lies better?

> HE advertised a max gain of 12 dBi

> Grove a liar as they both said the same thing just in different ways.

This discussion had nothing to do with Grove but it seems to be your only defense for Tim and Antennawarehouse's lies.

Yes George, the cat is out of the bag. You are a fraud. For some reason you selectively replied. Why is that George? Run out of lies and excuses. Let's see what George couldn't find a Grove excuse for.

****** George snipped **********
George you are a bold faced liar and are attacking me to cover your part in perpetuating a lie. On YOUR web site YOU claim in YOUR product review and I quote:

"Create antennas are well over $400.00 and KLM's over $300.00 for the same frequency coverage"

Not true George. Is this scanner beam resonant on 6 meters? Nope. A log periodic that claims to "have higher performance in the 30-50 MHz. VHF low band....than any other antenna we have tested in it's price class, and rival the performance of logs costing many times their price." would be resonant on 6 meters. These others are. What does that tell us George?
****

Why so silent over this George? No defense for YOUR lie?????

The fire is mostly in the Angeles Nat'l Forest, and the San Bernardino Nat'l Forest, so the Berdoo trunked system hasn't been a big factor.

But if you subscribe to socalfire @ yahoogroups, you'll find a number of people near the fire who can provide more info.

And for the hardcore listener that must have it all may I suggest the 108-118 MHz band. This is where VORs and localizers are located. You can listen to the Morris code ID and somtimes aviation weather (HIWAS and TWEB) of the VOR frequency, although you have to be very close to the station to receive it. Once again, this is only for the purist. Consult a VFR sectional for VOR locations and frequencies.

For some reason many scanners start the airband at 118 MHz. The PRO-94 does start at the lower 108 MHz.

No need to buy a TNC. There are programs on the Web which
will decode all you want using the computer's soundcard.

You might try www.indyscan.com for info about what cities are trunked .
Indyscan is the best site around for Indiana freqs & info related to
scanning the Hoosier State.

Ken R
Look and you will find it-what is unsought will go

4823. ID Tracker Freeware Updated

Newsgroup: rec.radio.scanner
Date: 2002-06-27 23:20:35 UTC
From: "David M. Hitchner" <biteme@spammers.net>
Message-ID: <J1NS8.13497$Ji6.1702865@e3500-atl2.usenetserver.com>
Source record: 46639
Cross-posted to: rec.radio.scanner,alt.radio.scanner

ID Tracker has been updated to version 1.8.2.

http://personal.atl.bellsouth.net/lig/k/d/kd5eis/IDTracker/IDTracker.htm

Updated items for this version:

* Decreased search times for existing IDs.
* Added check to prevent multiple alerts for the same ID.
* Corrected problem that prevented the ID list from being updated if the current ID was already first in the list.
* Removed sleep parameter in Settings screen. Performance is now self adjusting.

I have also started a list (short) of possible future enhancements.

http://personal.atl.bellsouth.net/lig/k/d/kd5eis/IDTracker/IDTracker.htm#The Future

I would like to hear from anyone running or attempting to run ID Tracker on Windows NT, XP, or 2000.

The smallest of the bunch is the Alinco DJ X2, the DJ X3 is also pretty small along with the Icom R2 and Yaesu VR 500 and VR 120. The X2 does a nice job but programming is a pain with out number keys. The only one out of that group that has number keys is the VR 500. All of them can be programmed by computer which is nice for the ones without number keys.

I tried selling here in the group twice before I posted it to ebay. I
never got a response. Yet, the scanner went for just as much on ebay
(more, technically) as I was asking. Go figure.

Do you actually own or have any experience with these radios, cas if
you do you would know that the computer programming socket installed
is a regular 9 pin RS232 and only requires a REGULAR 9 pin to 9 pin
cable to hook u pto your computer.

As for trunking, If by HORN type sound you mean CONTROL CHANNELS, then
no there is not a MOD as this is a valid data carrying channels and if
you were operating your scanner properly you would know that you cant
hear this sound whilt the radio is in trunking mode.

For any _REAL_ Radio Ham (This thread is, after all, SPAMMed into Ham Radio groups) the best hand-held scanner is the one that you design and make yourself.

Check out www.thiecom.de for online sales. Site is mainly in German
language. Prices 20-30% less than UK. I'm not connected, just a satisfied
customer. I just bought a Yupi 7100 from them for 314 euros including
delivery to Ireland - I think that's a pretty good deal.
One snag - they dont take credit cards outside Germany - u can order online
but u need to pay by post or cash on delivery.

If you purchase one of the computer programmable small units get the
cable and
software, if the cable is not included at the time of purchase!
Grove has a ICON IC R-2 used for $129.99 check the BARGAIN BIN

<http://www.grove-ent.com>

They carry them new, along with the other small wide band radios
right now ICOM offers free cable and soft ware
with the purchase of the R 2 or R 10. I got an IC R-2 last summer and
had
a great time at the air shows with it, along with a RELM HS 200 and PRO
-90 for trunking.
Keeping several diskettes with different frequency files for the R 2
helps to make each event unique.
The reason for the IC R-2 is the Military aircraft band coverage and the
ability to select
the mode I. E. AM in the 138 Mhz - 143.990 band. Other scanners don't in
this spectrum BUT receive only in nFM. The R-2 does CTCCS squelch but
not Digital tone squelch
and it will search out and lock onto the CTCCS tones , which can be used
with any frequency,in any channel!
It also has a frequency off set, press a button and go to a repeater in
put or other half of
duplex pair!
The Uniden BC 245 XLT is supplied with a computer cable and software is
widely available
THe PRO - 93 is programmable but the computer interface cable has to be
purchased separately.
US NiMH batteries they last 30 % longer and one thing about the BC 245
XLT is it's battery
pack. But Lee Electronics and Metro West sell After market NiMH packs
for the Uniden BC 245
and PRO - 90 also Uniden's Sportcat hand held radios all these us the
BP 1600 NiMH pack

Can anyone help I can not see the talkgroups when I scan . If you happened to know what I may be doing wrong let me know I have the ID (talkgroup) tags in the scanner yet when I try to "trunk" scan it appears to scan but i get nothing.. When I shut off trunk it appears to work I hear the conversations.. yet I can not get it to show any talk group IDs.... I have my pro93 set and it works good with the Mor 800 Type II system as "offset" before I switched it to "offset" it acted similar to this.. But, with the Uniden I can not see where to set it as "offset"

Any help is apprecuited..

Looking to trade for MINT Icom R75 or Drake R8 or R8A. Have to trade the following:

Uniden UBC 3000XLT bought new this year, full 800 MHz, 30 kHz steps for cell band, beautiful case, telescoping antenna with swivel, manual, battery pack, PS, barely used.

Also have to trade a Sony 7600GR w/Sony PS, manual, reel antenna, in excellent cond.

Also a Sony AN-LP1 antenna bought new this year.

My sentiments exactly, No disrespect intended to the folks in the US, but a lot of them will pay vast amounts of money just to have the 800/900MHz on the scanner. I don't think I have heard a mobile phone on ANY of my UK scanners for months and months, everybody's gone over to digital phones now. The bands are simply dead.

This is nuts. This thing went for $267.75 + $10.00 shipping. AES has it brand new for $279.99 and you might
even be able to get it cheeper elsewhere. I don't blame the seller but I would think the buyer would check
prices first.

To the best of my knowledge their are no scanners capable of decoding digital signals. Uniden, (Radio Shack) is working on one but it's not on the market yet. It will not be able to do encrypted digital and will carry a heavy price tag.

And it won't be designed to decode any digital signals other that "APCO P25" type, which will mostly be public safety agencies' communications. Railroads are supposedly considering using APCO 25 as well. The vast majority of digital stuff - and ALL encrypted communications (digital or analog) - will remain unavailable. I doubt cordless or cellphones will go to APCO P25... they have no reason to.

Hadn't considered the CHP freq's, but should have, obviously. I have always had trouble hearing much from the CHP, and have never once heard a mobile transmission on those freq's. The ones I'm using are right down around 6 meters, just under 50 MHz. I think CHP has used them for a long time, but a friend of mine told me they had switched to using repeaters, which obviously would be terrific for monitoring. I have no info at all on that. Since I've had so much trouble hearing much of anything on CHP, I don't monitor them very much. Thx for the help!

I would hope that the cops who showed up would cart this idiot off to the station for filing a false police report. Like any efficient organization, cops will prioritize calls and respond accordingly. How about those folks who had more urgent matters happening, who did not get the appropriate attention due to this person claiming he'd shot some people?

One time a friend of mine at the gas station I worked in got into a shoving match with a customer, and hit the panic button. When the cops showed up expecting an armed robbery, guns drawn, they read him the riot act.

Thank you very much my friend, it's true, in www.thiecom.de, the YUPITERU MVT-7100 is cheaper than other sites, 298 ? without delivery.

I have found another site more cheap, in an Australian store: http://e5.eon.net.au/E5.cgi?ST=syncro&CMD=Category&Category=Scanners&Company=Yupiteru
282,15 ? (without delivery), but I prefer to buy it here in Europe, so possibly I buy it in www.thiecom.de, for only 16 ? plus ;-)

I do not have sure is if the repairs within the guarantee period, can be also carried out in our own country, having bought scanner in Germany.

Many Thanks,

Trondheim

Have the following items for sale or trade for Mint Icom R75 w/DSP or Drake R8 or R8A:

Uniden UBC 3000XLT bought new this year, barely used, beautiful case, ps, swivel telescoping antenna, manual, full 800 MHz, 30 kHz step mod, $285 + shipping or trade

Sony 7600GR, Sony PS, manual, reel antenna, case, $145 + shipping or trade

Sony AN-LP1 loop antenna with all accessories, bought new recently, trade only

Looking to trade even if possible.

Source record: 46588

George, the other day you exibited what you are worth with your phone call to my house.

Have you called your Lawyer yet George? I mean you didn't once defend or complain about my accusation that you are a liar and a shill but you threatened me with your Lawyer if I called you a FRAUD again? If you don't like the moniker don't makes claims you can't back up.

Throughout our phone conversation your only defense was "have you seen what Grove does" or "Grove does it". Wait you did make the claim that all you have to do is go on the Web and get specs of antennas to compare them. Even funnier is you claimed to me this was as good as actually testing them side by side. You are a fraud and a shill George.

You are a FRAUD George. The review on your web page is you parroting Tim with your addition of misinformation. You are a FRAUD when you say your AntennaWarehouse scanner beam rivals antennas costing many times more (IOW with 2 to 3 times the boom length and 2 to 3 times the number of elements). You also are a FRAUD when you claim the AntennaWarehouse scanner beam has the same frequency coverage even though it's longest elements are 2 to 3 times shorter than the antennas you are comparing it to. How does this new physics of your work GeorgeF (F for Fraud)?????

I don't give a rat's ass about Grove. All I ever asked is for Tim at AntennaWarehouse to reveal the antennas he claims he spent a summer comparing his scanner beam to. Tim posted that claim here to this group. Seems really odd that he wouldn't back that claim up followed by his spam being replaced by you. Why would he (and you) be afraid to reveal which antennas he used in his Summer long test GeorgeF (F is for FRAUD)? FRAUD?

BTW: You really showed what a squeaky voiced (you sound like a prepubescent girl or Mickey Mouse with his balls in a vice) POS you really are. I cornered you with your own bullsh*t and all you could do is make a remark about my wife, by name, and hang up. What is with that crap GeorgeF (F is for Fraud)?

YOU are a FRAUD a Liar and a creep GeorgeF.

4873. Radio Shack PRO-23 Scanner - Cellular Modification Question

Newsgroup: rec.radio.scanner
Date: 2002-06-29 16:53:08 UTC
From: Charles & Kathy Houser <ch42958@alltel.net>
Message-ID: <3D1DE5F4.118EE74C@alltel.net>
Source record: 46589

I have a PRO-23 Radio Shack Scanner. It has a date code of 2A4. Model No. 20-504.

I have looked for pro-23 cellular modifications and I can't get them to work. I was just wondering which pro-23 scanners can be modified. Hold 2-9-L/O when i turn it on doesn't work. I have heard that there is a way to get cellular frequencies on a pro-23 that the 2-9-L/O mod doesn;t work on, but it requires to cut a wire from the daughter board that blocks them frequencies. I was just wondering if anyone has any information on that either.

If anyone has anyother answers to my questions they will be greatly appreciated.

thanks for any help

patrick

A well designed log periodic can function over a 2:1 frequency range- perhaps 3:1 before its characteristics degrade. So, if you want to cover 30 Mhz, the upper end will be 60- 90MHz. Hoping for 30MHz -->1GHz or even 100MHz-->1GHz is out of the question.

4884. Scanner Battery Pack for older Radio Shack scanners

Newsgroup: rec.radio.scanner
Date: 2002-06-30 01:40:13 UTC
From: allanstern@aol.com
Message-ID: <20020629214013.01536.00001486@mb-dd.aol.com>
Source record: 46503

Radio Shack sells a "Scanner Battery Pack with Charging Stand" (Item
23-288).
The Battery Pack fits into the following scanners:
Pro-30, 31, 32, 33, 34, 36, 37, 39, 42, 43, 44, 50, 60, and 62.
The Charging Stand accepts the battery pack (outside of the scanner), and
uses the normal wall wart for power.
I have several of the above types of scanners. So I keep at least one
battery pack in the charging stand at any time.
The unit costs under $20, so it is about the same cost as decent nicads,
but offers the convenience of allowing you to be charging a pack as you are
using another pack in the radio. When on sale they are $14.99.
The packs are rated at 600 mAh.
The unit appears on p. 104 of Radio Shack's 2002 catalog.

4886. Icom R-8500

Newsgroup: rec.radio.scanner
Date: 2002-06-30 03:28:32 UTC
From: jr <jerryham@pobox.com>
Message-ID: <3D1E7AE0.3098E299@pobox.com>
Source record: 46505

We have a Icom R8500. This has about 50 frequencies in 4 or 5 banks programed and working. Somehow recently whenever we choose a frequency within a bank, if something is on that frequency, this radio starts scanning up in freq. I called Icom and have tried the normal scan modes and have not been able to stop this from happening. Icom suggests a CPU clear, I would rather not do that yet.

Any help would be appreciated

Keith,

Check out http://www.scanohio.com/special/parks.html

That site, should have all of the frequencies for Cedar Point and then you can also check out http://www.scanohio.com and find scanner frequencies for other agencies in Ohio. (Such as the fire departments, hospitals, ems, police, etc of the areas that you are visiting).

Thanks!

I was thinking he same thing Bud. I have a KMA4113 that is wide enough
to transmit from 54 MHz to 440 MHz. If my math serves me that is a bit
more than 3 to 1. The factory says 41-1300 MHz. I have never been able
to test it above 800 MHz other than listening but the upper end seems
to be there.

on both sides

4893. Icom R7100 Question

Newsgroup: rec.radio.scanner
Date: 2002-06-30 05:40:04 UTC
From: ogcallme@aol.com
Message-ID: <20020630014004.14524.00001352@mb-mn.aol.com>
Source record: 46511

I see from the manual for the Icom R7100 receiver that when in the PROGRAMMED SEARCH mode you have a capability to lockout 100 frequencies and these are stored in channels "700 to 799"

Which leads to my question - - - When the 100th skip frequency has been entered does the R7100 go back to the beginning of the skip frequencies and start overwriting and replacing old skip frequencies? I do not see anything in the manual that says one way or the other.

Your help is GREATLY appreciated.

4896. Irish scanning laws

Newsgroup: rec.radio.scanner
Date: 2002-06-30 06:42:18 UTC
From: Mac Rosevelt <rapture@calweb.com>
Message-ID: <3d1ea7e6_2@news3.calweb.com>
Source record: 46515

I am seriously considering living in Ireland (Galway, to be specific) for a couple of months next year, so I am wondering what the law there is on scanning, and how the police and public feel about scanners. I know in some countries scanners are illegal or require a permit to use, and in the USA many private security firms are hostile to scannists and many public, non-scanning folk think scanners are used only to listen to the cops or phone conversations, which can be quite annoying to hear people complain about.

Glenn stop putting down the few people left in this hobby who are willing to help others getting started. I'm new to this hobby and got more help from George than all the others on here combined. I live 50 miles from George and he welcomed me to his shack, spend 2 hours there and learned more in those 2 hours about scanning then from any other source.

After seeing his setup I bought one of the antennawarehouse scanner beams. It turned out to be the best antenna I have. After being in this hobby for about 2 years with a main interest in military frequencies I have found one thing, getting information from the long time pros is very hard. Its like the good ole boys club. It is that kind of attitude which kills most hobbys and I'm grateful that George doesn't have that attitude as he share more info and frequencies other the others on here. I have seen many frequency lists but when I use his I hear more activity than lists published by others on the net.

Unless you are going to contribute to this hobby keep your thoughts to yourself. After searching UseNet posts I see that you not only stir up trouble on rec.radio.scanner but you are well known on many other newsgroups for stirring up trouble and starting flames.

Bill

You are a fraud George and personal attacks and lies don't change
that.

You called me up and threatened to sue me George. After I confronted
you with your shills and lies you made remarks about my wife by name
and hung up.

You won't hear from me if you don't try and pass your lies on as
truth. If you don't defend a dishonest businessman with more lies
fraud and deception.

I said nothing untrue and your cheap response shows what you are made
of George. The same thing the little man that called me up and made
remarks about my wife is made of.

Tell me Bill.

What do you think of a business that advertises they spent a summer
testing antennas costing many times more than theirs but refuse to
disclose these antennas. AntennaWarehouse still claims on their web
site their beam rivals antennas costing many times more but they
refuse to say which one. How do you explain that Bill?

I never said the scanner beam did work. What I have said is the claims
made on the web site are false.

See George's defense for his actions Bill? A personal attack because
he can't defend his actions. He is a fraud and a creep. If you don't
like what I say you can easily filter me.

Yes Bill, I have been in a few flames. I speak my mind when it comes
to creeps like George. I actually thought him above that but I was

wrong.

Glenn

Source record: 46537

I am selling my Yupiteru MVT-9000 M3.5 scanner. It is loaded with all the bells and whistles and complete unblocked coverage. It is in mint condition used maybe 10 hours or less all indoors. It comes with all original packing, manual, belt clip, handstrap, 9K stock antenna, and nicads (never used them). It also comes with the optional case that has been on it since I've had it. I am also including a Watson W-899 Wideband antenna, Radio Shack power adapter and Rich Wells Yupiteru MVT-9000 owner's guide. The M3.5 is a modification from the dealer Bandercom where I purchased the scanner. It scans 37 channels/sec and searches 37 steps/sec versus stock 30 and 30. Also reduced 10.8 Mhz intermodulation inteference by 70-95% (which also reduces the number of birdies). You can check it out at Bandercom (http://bander.com/export/exscan.htm) if you are not familiar with it. This is an amazing scanner and I am only selling it because I want to buy a Garmin GPS V receiver. I prefer payment by money order, USA only. If you have any questions can email me at jetmaker@hotmail.com. Thanks Glenn.

For sale: MINT condition Yupiteru MVT-9000 M3.5
$400.00 (firm) plus shipping/ins, USA only please

Yupiteru MVT-9000Mk2 Modified M3.5
$579.00
Watson W-889 Wideband Receive (25MHz-1900MHz) antenna $29.95
OP-90 case
$23.00
Radio Shack Model: 273-1773 power adapter
$12.95
Rich Wells Yupiteru MVT-9000 Owner's Guide
$21.45

Total $666.35

Here's info on the scanner

Range: 0.5000-2039 MHz (no gaps)
Channels: 1000
Banks: 20
Modes: AM, NAM, FM, WFM, USB, LSB, CW
Priority: 10 channels
Conversion: Triple
Scan: 37 channels/sec (with mod.)
Search: 37 steps/sec (with mod.)
Power: 4 AAs 100V AC 12V DC
Size: 2.6"(W) x 6.1"(H) x 1.6"(D)
Weight: 410g

Features: 2 VFOs, band scope w/marker, auto-store, alpha-tagging, S-meter search-skip, attenuator

There is some information at:

http://www.cebik.com/lpd.html

Bill Orr's antenna book had some decent plans in it as I recall.
